

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS
DISEASE IN CERTAIN LARGE TOWNS.

~~~~~  
Published by Authority of the Registrar-General.

AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 213.] **Marriages**—*October, November, December, 1901.*
Births and Deaths—*January, February, March, 1902.* [Price 9d.]

*General Register Office, Somerset House,
28th April 1902.*

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1902 is estimated at 41,952,510 persons; that of England and Wales at 32,995,614, that of Scotland at 4,531,299, and that of Ireland at 4,425,597.

In the United Kingdom 290,213 *births* and 195,202 *deaths* were registered in the three months ended 31st March 1902. The natural increase of population was, therefore, 95,011. The number of persons married in the quarter ended 31st December 1901 was 168,268.

The birth-rate in the United Kingdom in the *first* quarter of 1902 was 28·1, and the death-rate 18·9, per 1000. The marriage-rate in the *fourth* quarter of 1901 was 16·7 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Emigration.

According to the returns issued by the Board of Trade, it appears that 56,344 emigrants embarked during last quarter, from the several ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 1,250 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom numbered 30,616, of whom 23,012 were English, 3,801 Scottish, and 3,803 Irish, whilst 25,728 others were of foreign nationality. The proportions of emigrants accredited to the several parts of the United Kingdom,

per million of the respective estimated populations, were as follows:—England, 697; Scotland, 839; and Ireland, 859. Compared with the averages in the three preceding first quarters, the proportion of English emigrants showed an increase of 30·0 per cent., that of Scottish emigrants an increase of 44·4 per cent., and that of Irish emigrants a decrease of 10·7 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,061 registration sub-districts of England and Wales during the three months ended 31st March 1902; and the MARRIAGES in 15,391 churches or chapels, in 13,158 registered places of worship unconnected with the Established Church, and in 636 Superintendent Registrars' Offices, during the three months ended 31st December 1901.

Changes in the Quarterly Return.

From the beginning of the current year onwards statistics of births and deaths, and, as far as possible, of notified cases of infectious diseases, for all English and Welsh towns that contained at the last census populations exceeding 25,000, will be published in the Quarterly Returns. The number of towns dealt with will therefore be increased from one hundred to one hundred and seventy-nine, containing, in the aggregate, about 56 per cent. of the population of England and Wales. The provisional estimates of population which are now given will be revised from time to time, on the basis of the latest trustworthy data that may be available.

Marriages.

During the *fourth* quarter of 1901 the marriages of 142,228 persons were registered, being equal to an annual rate of 17·3 persons married per 1000 of the estimated population, against an average rate of 17·6 per 1000 in the fourth quarters of the ten years 1891–1900.

Among registration counties the lowest marriage-rates were 13·9 in Middlesex, 14·3 in Hertfordshire, 14·4 in Somersetshire, and 14·8 in Cheshire; the highest rates were 19·1 in London and in Norfolk, 19·2 in Staffordshire and in Warwickshire, 19·7 in Suffolk, 19·9 in Nottinghamshire, 20·0 in South Wales, and 20·8 in Cambridgeshire.

The marriage rate in the entire year 1901 was 15·9 per 1000, against 16·2, 16·4, and 15·9 in the three years immediately preceding, and an average of 15·6 in the ten years 1891–1900.

Births.

The births registered in the *first* quarter of 1902 numbered 232,436, and were in the proportion of 28·6 annually per 1000 of the population, the mean rate in the ten preceding first quarters having been 30·2. The rate last quarter is the lowest for the corresponding quarter of any year on record. In registration counties the lowest birth-rates during the quarter were 20·3 in Rutlandshire, 21·5 in Sussex, 21·7 in Westmorland, 22·6 in Oxfordshire, 22·8 in Dorsetshire, and 22·9 in Cornwall; the highest rates were 30·6 in Essex, 31·2 in Nottinghamshire, 31·6 in Northumberland, 31·7 in South Wales, 34·5 in Staffordshire, 35·3 in Monmouthshire, and 36·3 in Durham.

In 76 great towns the birth-rate averaged 30·8 per 1000, ranging from 16·8 in Bournemouth, 18·4 in Hastings, 20·8 in Hornsey, 21·2 in Halifax, and 21·3 in Bury, to 37·9 in Rotherham, 38·3 in West Bromwich, 39·4 in Wigan, 39·6 in St. Helens, 39·7 in Merthyr Tydfil, and 41·7 in Rhondda. In 103 smaller towns the mean birth-rate was 27·0 per 1000, whilst in the remainder of England and Wales, excluding these 179 towns, it was 26·7.

Natural Increase of Population

The natural increase of population in England and Wales during the quarter, by excess of births over deaths, was 81,161, against 83,791, 58,675, and 85,298, in the first quarters of 1899, 1900, and 1901, respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 27s. 1d., 26s. 11d., and 26s. 7d. respectively, in the preceding three quarters, was 27s. 3d., last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 3 $\frac{1}{2}$ d.; of prime beef, 7d.; of inferior mutton, 5 $\frac{1}{2}$ d.; of prime mutton, 8 $\frac{3}{4}$ d. Compared with the average prices in the preceding three months, the mean price of inferior beef increased by $\frac{2}{3}$ d., and the price of prime beef decreased by $\frac{1}{2}$ d.; the price of inferior mutton increased by $\frac{1}{4}$ d., while the price of prime mutton decreased by $\frac{1}{2}$ d. The average price in the London Market of sea-borne coal, put in barge from the collier in the Thames, was 18s. 9d. per ton, against 23s. 9d. and 21s. 5d. per ton in the first quarters of 1900 and 1901 respectively. The mean price of 2 $\frac{3}{4}$ l. per cent. Consols was 94l. 3s. 8d., having been 92l. 10s. 10d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been raised on 31st October, 1901 from 3l. to 4l., was reduced on 23rd January, 1902 to 3 $\frac{1}{2}$ l., and was further reduced on 6th February to 3l. The mean rate during the quarter was 3l. 6s. 5d.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 720,643, of whom 221,977 received in-door, and 498,666 out-door, relief. The proportion of the population in receipt of poor-law relief was 21·8 per 1000, against 21·8 and 21·7 per 1000, respectively, in the first quarters of 1900 and 1901.

Meteorology.

Remarks by Mr. James Glaisher, F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 74–82.

The weather in January was mostly dull and mild, the temperature being above its average on all but 3 out of the first 24 days of the month. In February it was mostly cold, dull, and cheerless, the temperature being below the average throughout the first three weeks of the month, with several extremely low readings. In March it was generally mild and dull, the temperature of the air being above the average excepting for a short period near the beginning and another near the end of the month.

The mean reading of the barometer at Greenwich was 29·786 inches, being ·013 of an inch above the average reading in the first quarters of 61 years; the mean reading was ·213 of an inch above the average in January, but was ·112 of an inch below it in February, and ·062 below it in March. The mean temperature of the air was 40°·5, which is 1°·6 above the average in the first quarters of 131 years. The mean temperature exceeded the average by 5°·0 in January, and by 3°·3 in March, but fell 3°·6 below it in February. At 27 other stations of observation, the mean temperature of the air during the quarter ranged from 37°·4 at Wolverhampton, 38°·0 and 38°·1 at two stations in Halifax, and 38°·4 at Stonyhurst, to 42°·1 at Llandudno, 42°·2 at Ventnor, 43°·2 at Truro, and 44°·3 in Guernsey.

The amount of rain or melted snow measured during the quarter at the Royal Observatory was 2·79 inches, which is 2·15 inches below the average in the first quarters of 87 years. The amount was below the average

in each month of the quarter, the deficiency being 1.19 inches in January, 0.76 inch in February, and 0.20 inch in March. At 27 other stations of observation, the rainfall during the quarter ranged from 2.38 inches at Cambridge, 3.00 inches at Leeds, 3.17 inches at Oxford, and 3.23 inches at Hereford, to 7.24 inches at Barnstaple, 7.71 inches at Truro, 8.02 inches at Llangammarch Wells, and 9.99 inches at Stonyhurst.

The duration of bright sunshine recorded at the Royal Observatory was 158.6 hours, being 17.6 per cent. of the time during which the sun was above the horizon; the mean proportion in the ten preceding first quarters having been 19.9 per cent. The duration of bright sunshine exceeded the average by 2.3 hours in January, but showed a deficiency of 3.9 hours in February, and 18.9 hours in March.

Deaths.

The deaths registered in England and Wales last quarter numbered 151,275, and were in the proportion of 18.6 annually per 1000 persons living, the average rate in the ten preceding first quarters having been 20.3. In registration counties the death-rates ranged from 15.3 in Rutlandshire and in Westmorland, 15.5 in Northamptonshire, 15.6 in Derbyshire, and 16.1 in Huntingdonshire and in Bedfordshire, to 19.4 in Devonshire and in Lancashire, 19.9 in Monmouthshire, 20.2 in South Wales and in North Wales, 21.1 in Cornwall, and 21.2 in Kent.

The 151,275 registered deaths included 76,703 of males and 74,572 of females, the death-rate among males being 19.5, and that among females 17.7, per 1000 of the estimated populations of the respective sexes. Compared with the averages in the ten preceding first quarters the death-rate both of males and of females showed a decrease of 1.7 per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 110 is to 100, against a proportion of 109 to 100 in the first quarters of the ten preceding years.

Urban and Rural Mortality.

In 76 great towns, of which the aggregate population in the middle of 1902 is estimated at nearly fifteen millions, the death-rate was 19.9 per 1000 living, or 1.3 in excess of the death-rate in the whole country. The rates in the several towns ranged from 10.6 in Hornsey, 12.6 in Handsworth, 12.7 in Walthamstow, and 13.7 in East Ham, to 22.3 in Preston, 22.5 in Burnley, 22.9 in Liverpool, 23.1 in Rhondda, 23.6 in St. Helens, and 28.6 in Merthyr Tydfil.

In 103 smaller towns, with an aggregate population estimated at more than three and a half millions in the middle of 1902, the death-rate was 17.3 per 1000 living, or 2.6 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with a population of nearly fourteen and a half millions of persons, of whom nearly seven millions live in small towns, and nearly seven and a half millions in rural districts, the death-rate was 17.5.

Mortality at Different Ages.

Of the 151,275 deaths registered last quarter, 32,503 were those of infants under one year of age, 68,235 those of persons aged between one year and sixty years, and 50,537 those of persons aged sixty years and upwards.

The mortality of infants, measured by the proportion of deaths under one year of age to registered births, was 140 per 1000, the average in the ten

preceding first quarters having been 146. In registration counties the lowest proportions per 1000 births were 58 in Rutlandshire, 105 in Huntingdonshire and in Westmorland, and 120 in Bedfordshire and in Essex; the highest proportions were 162 in Cambridgeshire and in Monmouthshire, 169 in North Wales, 186 in Cornwall, and 187 in South Wales.

In the 76 great towns infant mortality averaged 139 per 1000 births, being slightly below the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 82 per 1000 in Hornsey, 90 in West Hartlepool, 108 in Tottenham, and 109 in East Ham and in Wolverhampton; the highest were 185 in Preston, 186 in Halifax, 191 in Burnley, 192 in Norwich, 214 in Rhondda, and 223 in Merthyr Tydfil. Among the 103 smaller towns infant mortality averaged 142 per 1000 births, ranging from 50 in Ilford, 65 in Beckenham, 73 in Richmond, 75 in Macclesfield, 81 in Dover, and 82 in Southend on Sea, to 200 in Shrewsbury, 203 in Chatham, 209 in Stoke upon Trent, 211 in Llanelly, 220 in Mountain Ash, 226 in Ramsgate, and 251 in Longton. Excluding these 179 towns, infant mortality in the remainder of England and Wales was in the proportion of 140 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 9·3 per 1000 of the estimated population at this group of ages, being 0·9 below the mean rate in the ten preceding first quarters. Among persons aged sixty years and upwards the mortality was at the annual rate of 84·0 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding first quarters having been 90·8.

Compared with the mean rates in the ten preceding first quarters, the mortality of infants under one year of age showed a decrease of 4·1 per cent., that of persons between one year and sixty years of age a decrease of 8·8 per cent., and that of persons aged sixty years and upwards a decrease of 7·5 per cent.

Mortality from certain Epidemic Diseases.

The 151,275 deaths from all causes include—

2,908	that were attributed to measles,
2,467	“ “ whooping-cough,
2,234	“ “ diphtheria,
1,207	“ “ scarlet fever,
1,135	“ “ diarrhoea,
1,121	“ “ small-pox,
and 938	“ “ “fever.”

Thus, to the above-mentioned epidemic diseases in the aggregate, 12,010 deaths were referred during the quarter, being in the proportion of 1·48 annually per 1000 of the population, or 0·12 below the mean proportion in the first quarters of the preceding ten years.

The mortality from small-pox was above, that from measles, diphtheria, whooping-cough, “fever,” and diarrhoea was below, and that from scarlet fever was equal to, the average in the corresponding quarters of the preceding ten years.

The deaths attributed to *measles* were 2908 in number during the quarter, corresponding to an annual mortality of 0·36 per 1000 of the population, or 0·03 below the corrected average rate in the first quarters of the previous ten years. No deaths from measles were returned during the quarter either in Cumberland or in Westmorland, and the rate was below 0·1 per 1000 in

Worcestershire, Herefordshire and Devonshire. In the other English counties it rose to 0.59 in Rutlandshire, 0.61 in the West Riding of Yorkshire, and 0.64 in London. In the 76 great towns of England and Wales measles caused an average death-rate of 0.50 per 1000. No deaths were referred to this disease in any of the following great towns:—Hastings, Ipswich, King's Norton, Smethwick, Coventry, Derby, Bootle, West Hartlepool, and Tyne-mouth. In the other great towns the measles death-rate ranged upwards to 1.73 in Preston, 2.80 in Rotherham, and 3.22 in Burnley. In the 103 smaller towns of England and Wales measles was fatal in the average proportion of 0.31 per 1000, and among these towns the disease was especially fatal in Dewsbury, Eccles, Lancaster, Cambridge, Batley, and Gorton. In the remainder of England and Wales the average death-rate from measles was 0.22 per 1000. Among registration districts and sub-districts outside the 179 chief towns the mortality from measles was excessive in St. Ives (Cornwall), Rugby, Worksop, Thornhill, Rawmarsh, Ruabon, and Holyhead.

Whooping-cough was the registered cause of death in 2467 instances during the quarter, giving rise to a death-rate equal to 0.30 annually per 1000 of the population, which is lower by 0.15 per 1000 than the corrected average death-rate from this disease in the first quarter of the previous ten years. Rutlandshire and Huntingdonshire were free from whooping-cough mortality during the quarter, and the rate did not exceed 0.06 per 1000 in the counties of Hereford, Bedford, or Westmorland. The counties with the highest rates from this disease were Warwickshire 0.59 per 1000, Cornwall 0.60, and Leicestershire 0.63. Among the 76 great towns whooping-cough was fatal at the average rate of 0.41 per 1000 living. Ipswich, Hanley, and King's Norton returned no deaths from this disease, which caused a mortality not exceeding 0.05 per 1000 in Swansea, Norwich, Reading, and Hornsey. In the remaining great towns the death-rate from whooping-cough rose to 1.05 per 1000 in South Shields, 1.18 in Aston Manor, and 1.86 per 1000 in Stockton on Tees. In the 103 smaller towns the mortality from this disease averaged 0.23 per 1000; it was especially high in Worcester, Nelson, Folkestone, Workington, Llanelly, and Ramsgate. In the remainder of England and Wales whooping-cough accounted for an average death-rate of 0.21 per 1000. Among registration districts and sub-districts outside the 179 chief towns the mortality from this disease was excessive in Hurstpierpoint, Brixham, Coker, Bridgnorth, and Thornaby.

Diphtheria (exclusive of "*croup*," unless stated to be *membranous*) was returned as the cause of death in 2234 instances during the quarter, the deaths so returned being equal to an annual rate of 0.27 per 1000, which differs by only a small fraction from the decennial average (0.28) for the first quarter of the year. The lowest death-rates from this disease were 0.05 in Cornwall, 0.08 in Cambridgeshire, 0.09 in Oxfordshire and in Huntingdonshire, and 0.10 in Hertfordshire and in Norfolk. The highest rates were 0.40 in Monmouthshire, 0.45 in Middlesex, and 0.56 in South Wales. Among the 76 great towns diphtheria caused an average mortality of 0.31 per 1000. No deaths from this disease were recorded in Halifax, and the death-rate did not exceed 0.07 per 1000 in South Shields, Newcastle upon Tyne, Norwich, York, Warrington, Handsworth, or Wallasey. In the other great towns the proportion ranged upwards to 0.81 in Cardiff, 0.82 in Willesden, and 2.31 in Hanley. In the 103 smaller English or Welsh towns diphtheria mortality averaged 0.26 per 1000, and among them the disease was especially fatal in Blackpool, Lowestoft, Southend on Sea, Mountain Ash, Stretford, Crewe, and Swinton & Pendlebury. In the remainder of England and Wales the rate averaged 0.24 per 1000. Among registration districts and sub-districts outside the 179 chief towns diphtheria was especially fatal in Ticehurst, Chichester, Southminster, Gnosall, Selby, Ogmores, and Llandyssil.

Scarlet fever was the registered cause of death in 1207 instances during the quarter, and accounted for a mortality equal to 0·15 per 1000 annually. Rutlandshire was free from fatal scarlet fever throughout the quarter (as had been the case during the preceding quarter also), and the mortality did not exceed 0·02 per 1000 in Bedfordshire, Cambridgeshire, Northamptonshire, or Hampshire. In the counties of Lancaster, Durham, Northumberland, and Monmouth the rate was equal to 0·28 per 1000, and the county of Warwick experienced the highest rate, namely, 0·34 per 1000; the last-mentioned county had experienced the highest mortality from this disease in the preceding quarter likewise. In the 76 great towns scarlet fever accounted for a mortality equal to 0·19 per 1000 annually. Fatal scarlet fever was absent, during the quarter, from the following ten great towns:—Croydon, Hastings, Bournemouth, Southampton, Northampton, Great Yarmouth, Devonport, Rochdale, Huddersfield, and Tynemouth. In Bolton and Wigan the rate was equal to 0·52 per 1000, in Middlesbrough to 0·56, in Birmingham to 0·57, and in St. Helens to 0·61, whilst South Shields suffered the highest rate, namely, 0·70 per 1000 annually. In the 103 smaller towns scarlet fever caused an average annual mortality equal to 0·16 per 1000, the disease showing the greatest fatality in Carlisle, Wednesbury, Farnworth, Ashton under Lyne, Chorley, and Tipton. In the remainder of England and Wales it was fatal in the average proportion of 0·10 per 1000. Among registration districts and sub-districts outside the 179 chief towns scarlet fever showed excessive fatality in Banbury, Moreton Say, Cannock, Darlaston, Quorndon, Denton, Walton le Dale, Pontardawe, and Llandebie.

Diarrhœa was the registered cause of death in 1135 instances during the quarter, giving rise to a mortality equal to 0·14 annually, per 1000 of the population. No deaths were referred to diarrhœa in Bedfordshire, and the rate of death did not exceed 0·05 per 1000 in Hampshire, Oxfordshire, or Cumberland. The highest rates were 0·22 in Warwickshire, 0·24 in North Wales, and 0·26 in Staffordshire. In the 76 great towns diarrhœa caused an average mortality of 0·15 per 1000. No deaths were attributed to diarrhœa either in Handsworth or in Warrington. In the other great towns the proportions rose to 0·45 in Walsall and 0·55 in West Bromwich. In the 103 smaller towns diarrhœa was fatal on the average to 0·12 per 1000 of the population. Among these towns it showed exceptional fatality in Barnsley, Burslem, and Dudley. In the remainder of England and Wales the death-rate from diarrhœa averaged 0·13 per 1000.

Small-pox was the assigned cause of 1121 deaths during the first quarter of the year 1902, as compared with 12, 44, and 296 successively in the three quarters immediately preceding. Most of these deaths occurred in hospitals. The deaths from small-pox registered as belonging to the 179 chief towns amounted to 938; of these deaths 734 belonged to London (683 of these took place in the Metropolitan Asylums Board hospitals in Dartford), 41 belonged to West Ham, 37 to Edmonton, 22 to Tottenham, 18 to Erith, 11 to East Ham, 7 to Willesden, and 5 deaths apiece to Croydon, Gillingham, Ilford, and Swansea. Of the deaths occurring outside the chief towns of England and Wales, 31 belonged to the Orsett Registration District of the County of Essex, and 5 to Bury St. Edmunds Registration District of the County of Suffolk.

To "*fever*" (including the three principal forms—*typhus*, *enteric*, and *simple continued fevers*) 938 deaths were referred during the quarter, being equal to an annual rate of 0·12 per 1000 of the population, as against 0·14 per 1000, the average rate in the ten previous corresponding quarters. No deaths from "*fever*" were registered during last quarter either in Herefordshire,

Cornwall, or Rutlandshire, and the rate of mortality from "fever" did not exceed 0·03 either in Somersetshire, Buckinghamshire, or Hertfordshire. The highest county rates were 0·15 in the West Riding of Yorkshire and in South Wales, 0·16 in Durham, 0·17 in Lancashire, 0·18 in Warwickshire, and 0·20 in Northumberland. In the 76 great towns "fever" was fatal in the average proportion of 0·13 per 1000 of the population. No deaths from "fever" were registered in either of the following seven great towns:—Hastings, Reading, Norwich, Burton upon Trent, Stockport, Bury, and Cardiff. The highest "fever" rates were 0·47 in Stockton on Tees and in Bootle, and 0·56 in Smethwick. In the 103 smaller towns "fever" caused an average death-rate of 0·12 per 1000, and among these towns was exceptionally fatal in Aberdare, Barnsley, and in Swinton & Pendlebury. In the remainder of England and Wales the mortality due to "fever" averaged 0·10 per 1000. Among registration districts and sub-districts outside the 179 chief towns the mortality from "fever" was excessive in Ashby de la Zouch, Selby, Cramlington, and Morpeth.

Violent Deaths.

The deaths in England and Wales which were referred to different forms of violence, either accidental or otherwise, numbered 5,120 last quarter, and corresponded to an annual rate of 0·63 per 1000 of the population, against an average of 0·65 in the ten preceding first quarters. Among registration counties the lowest rates were 0·26 in Huntingdonshire, and 0·30 in Hertfordshire, in Bedfordshire, and in Cambridgeshire; the highest were 0·79 in Cumberland, 0·81 in South Wales, 0·82 in Monmouthshire, and 0·98 in Rutlandshire. In the 76 great towns the mean rate was 0·73 per 1000 living; among the several towns the rate was less than 0·10 per 1000 in Handsworth and in Aston Manor, but rose to 0·94 in Burton upon Trent and in Manchester, 0·98 in Sunderland, 1·07 in Bootle, 1·10 in Newcastle upon Tyne, and 2·16 in Merthyr Tydfil.

Certification of Causes of Death.

Of the 151,275 deaths registered in England and Wales last quarter, the causes of 138,517, or 91·6 per cent., were certified by registered medical practitioners, and the causes of 9,850, or 6·5 per cent., by coroners after inquest; whilst the causes of the remaining 2,908, or 1·9 per cent., were not certified; the average proportion of uncertified deaths in the ten preceding first quarters having been 2·4 per cent. The proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Buckinghamshire, Wiltshire, Cheshire, and Monmouthshire, but it reached 3·9 per cent. in Durham and in North Wales, 4·1 in Cumberland, 4·5 in Westmorland, 5·4 in Huntingdonshire, and 6·5 in Herefordshire. In the 76 great towns the mean proportion of uncertified deaths was 1·3 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Brighton, Southampton, Great Yarmouth, Devonport, Derby, Birkenhead, Oldham, or Cardiff, the proportion per cent. rose to 4·6 in Handsworth and in Liverpool, 5·5 in South Shields, 5·8 in Barrow in Furness, 6·1 in St. Helens, and 7·4 in Warrington.

Inquests.

Inquests were held in England and Wales concerning 9,850, or 6·5 per cent., of the total deaths, the mean proportion in the ten preceding first quarters having been 6·1 per cent. In the 76 great towns the proportion

of inquest cases was 7·8 per cent., ranging from 2·3 in Aston Manor, 2·7 in Stockton on Tees, 2·9 in Handsworth, 3·0 in St. Helens, 3·2 in King's Norton, and 3·5 in Smethwick, to 9·8 in Tottenham, 10·1 in Norwich and Merthyr Tydfil, 10·4 in Birkenhead, 10·7 in Burton-on-Trent, and 11·8 in Derby.

Deaths in Public Institutions.

The total deaths registered in England and Wales included 24,909, or 16·5 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding first-quarters having been 13·4 per cent. In the 76 great towns the deaths in public institutions averaged 22·6 per cent. of the total deaths, the lowest percentages in the several towns being 1·5 in Rhondda, 6·0 in Hornsey, 6·1 in Aston Manor, 7·3 in Tynemouth, and 7·4 in Handsworth, and the highest 23·5 in West Ham and in Newcastle upon Tyne, 25·3 in Birmingham, 26·8 in Liverpool, and 33·3 in London.

LONDON.

The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London which occurred in the Willesden Workhouse at Hackney, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth and Streatham, and in the Metropolitan Asylums Board Hospitals within registration London. The death-rate thus computed was equal to 21·8 annually per 1000 from all causes, and to 2·36 per 1000 from the principal epidemic diseases (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London be excluded, the rates will not exceed 21·3 and 2·34 per 1000 respectively. Table X. shows the death-rate in London after this correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the twenty-nine Metropolitan Boroughs, corrected by the distribution of all deaths in public institutions to the Boroughs to which the deceased persons had belonged, are also shown.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual death-rate per 1000 living last quarter was 20·8 in Edinburgh, 23·7 in Glasgow, 25·6 in Dublin, and 21·9 in Belfast, against 21·8 in London.

COLONIAL AND FOREIGN CITIES.

From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-five of the Colonial and Foreign cities, with an aggregate population estimated at nearly twenty-one millions, corresponded to an annual rate of 25·0 per 1000 persons living, against a rate of 19·9 in 76 great English towns.

In twenty-three European and American cities the mean rate was 20·7 per 1000, against 19·9 in seventy-six great English towns. In Paris the rate was 21·1, in Vienna 19·9, and in New York 20·5, against 21·8 in London. The rate for Berlin cannot be stated, as no copies of statistical returns have been received from that city during the current year. Among the other cities the death-rates ranged from 12·8 in Christiania, 15·2 in Brussels, and 15·8 in Antwerp and in Copenhagen, to 24·4 in Prague, 25·4 in St. Petersburg, 25·8 in Venice, 27·1 in Moscow, and 30·2 in Trieste. Among the Indian cities the death-rate rose to 95·2 in Bombay.

Small-pox caused 173 deaths in Philadelphia, 122 in New York, 85 in Bombay, 81 in Boston, 54 in Moscow, 53 in Paris, 33 in Antwerp, and 17 in St. Petersburg. In proportion to population, *measles* was most fatal in Amsterdam, Vienna, Prague, Buda-Pesth, Trieste, Rome, Turin, Venice, and New York; *scarlet fever* in St. Petersburg, Moscow, Prague, Trieste, and New York; *diphtheria* in Paris, St. Petersburg, Moscow, Venice, New York, Philadelphia, and Boston; *whooping-cough* in Copenhagen and Hamburg; "*fever*" in the Indian cities, in St. Petersburg, and in Philadelphia; and *diarrhæal diseases* in St. Petersburg, Moscow, Munich, Vienna, Prague, Rome, Turin, and Venice.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales during the first quarter of the year 1902 (*see* pages xxiii.-xxvi.).

In this Table 0.00 indicates that the deaths were too few to give a rate of 0.005; where no death occurred, - is inserted.
 Note.—The rates for the County of London do not in all cases agree with those in Table vi, page xvii; for explanation, see page ix.

TABLE XI.—Births and Deaths in the First Quarter (13 weeks) of 1902 in certain Colonial and Foreign Cities.

^a The Registration or Union Counties consist of groups of Registration Districts, which are generally co-extensive in that Registration County in which the principal town of the district, or the greater part of the population, is Geographical Counties.

^b These areas have been revised by the Ordnance Survey Department for the Report on the Census of 1901.
^c For London and Lancashire and their constituent districts and sub-districts revised populations have been
^d The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^e See page 6, note ^b.

^f On 1st April, 1901, part of Hornsey sub-district (129-1) was transferred from Middlesex to London. The averages for this part cannot be ascertained and are included in the figures given for Middlesex and for the South Midland Division.

REGISTRATION COUNTIES, and REGISTRATION DISTRICTS OF ENGLAND ; Births and INFANTS under one year of Age, and of PERSONS aged 60 years and upwards from THERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE, also of DEATH, registered in the Quarter ended 31st March 1902, in the DIVISIONS and REGISTRATION SUB-DISTRICTS OF ENGLAND AND WALES.

Divisions and Registration Counties.*	The DEATHS in the Quarter are stated by the Registrars to include														
	Deaths of		Deaths from										Inquest Cases.	Deaths in Public Insti- tutions.	Uncertified Causes of Death.
	Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhea.	Cholera.	Violence.

I.—LONDON.—REGISTRATION DISTRICTS.

Registration Districts.		Area in Statute Acres.	Enumerated Population, 1901.	Mar-riages	Births	Deaths	The DEATHS in the 13 weeks include													
							Deaths of	Deaths from												
								Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Cholera.	Violence.	Inquest Cases.	
																				Deaths in Public Insti-
				Registered in Quarter ended 31 Dec. 1901.	Registered in 13 weeks ended 23 Mar. 1902.	Average in First Quarters of the 3 Years 1899-01.	Registered in 13 weeks ended 23 Mar. 1902.	Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Cholera.	Violence.	Inquest Cases.	Deaths in Public Insti-
Owing to numerous changes of boundary on 1st April, 1901, the averages of the deaths for the three preceding years would be misleading, they are, therefore, omitted from this table.																				

The Registration Districts, 636 in number, are collections of contiguous Parishes or Places, combined for purpose connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

* See page 2, note b.

† For London, the figures given for the quarter are derived from the Weekly Returns made by the Registrars.

‡ 1a.—On 1st February 1902, a change was made between the district of PADDINGTON and that of HENDON (127), the part transferred contained no population. Revised areas have not yet been ascertained. See page 70.

§ 1b.—From 1st January 1902, this district to be called and known as ST. MARYLEBONE.

¶ 13, 14.—On 1st January 1902, alterations were made in the boundaries of these two districts. See page 70.

** 23.—From 1st January 1902, this district to be called and known as ST. OLAVE (BERMONDSEY).

II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

Registration Districts.	Area in Statute Acres.	Enumerated Population, 1901. (Unrevised.)	Registered in Quarter ended 31 Dec. 1901.	Registered in Quarter ended 31 Mar. 1902.	Deaths in Quarter ended 31 Mar. 1902.	The DEATHS in the Quarter are stated by the Registrars to include

* The Registration Sub-districts (2061 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; H indicates a Hospital or Infirmary; and L a Lunatic asylum.

b See page 2, note b.

c See page 6, note b.

* 1a: 1.—On 1st February, 1902, the boundary between this sub-district and Willesden (127:3) was altered. See page 70. † 2: 2: 3.—On 1st February, 1902, an alteration was made in the boundaries of these sub-districts. See page 70. The births and deaths for the two sub-districts cannot be shown separately.

Owing to numerous changes of boundary on 1st April, 1901, the averages of the deaths for the three preceding years would be misleading ;

* See page 6, note b.

* 23: 1.—On the 1st January 1902, the name of this sub-district was altered from St. Olave, Southwark, to St. Olave.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION SUB-DISTRICTS.

Registration Sub-districts.		Area in Statute Acres.	Enumerated Population, 1901. (Unrevised.)	Births Registered in the Unrevised 31 Mar. 1902.	Deaths Registered in the Unrevised 31 Mar. 1902.	The DEATHS in the Quarter are stated by the Registrars to include

* 126: 3, 5.—On 1st December, 1901, the boundary between these sub-districts was altered. Revised areas of the sub-districts have not yet been ascertained.

† 127: 3.—On 1st February, 1902, the boundary between this sub-district and St. Mary, Paddington (1a: 1), was altered. See page 70.

‡ 129: 1.—In consequence of changes of boundary on 1st April, 1901, the average number of deaths for the three preceding years would be misleading, and is therefore omitted.

§ 131: 1, 2, 3.—On 1st March, 1902, Bishop Stortford sub-district was abolished and its component parts transferred to the sub-districts of Braughing, Sawbridgeworth, re-named Stortford, and Stansted. See page 70. The births and deaths are shown as if the changes had taken place at the beginning of the quarter.

* 470: 1, 2, 3, 4, 6, 7.—On 1st January, 1902, the district of ROCHDALE, which had comprised eight sub-districts, was re-arranged, the number of sub-districts being decreased by one. See pages 71 and 72.

† 472: 4, 6.—On 1st February, 1902, the boundary between the sub-districts was altered. See page 72.

‡ 475: 3.—The 4 deaths from scarlet fever and the death from fever occurred in the Isolation Hospital and belonged to the Borough of Chorley. Of the 7 deaths from diphtheria (6 of which were registered during March) 6 occurred in Adlington Urban District.

548: 2. 555: 4.—On 1st March 1902, changes were made in the boundaries of these sub-districts. See page 72. The
 vised areas of the new sub-districts have not been ascertained. The births and deaths are included in the sub-district
 which they were registered.

551: 2.—Of the 10 deaths from whooping cough (7 of which were registered during March) 9 occurred in Hetton le Hole
 rish. Between the 1st and 19th April 5 more deaths from this disease were registered in the sub-district.

X.—NORTHERN COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

* 557: 3, 5, 6, 7.—On 1st February, 1902, certain parishes were transferred from Earsdon and Blyth sub-districts, and formed into Cramlington sub-district, and an alteration made in the boundary of Earsdon and Whitley sub-district. See page 72. The births and deaths are shown as if the change had taken place at the beginning of the quarter.

^b 557: 4.—Of the 16 deaths from scarlet fever 15 occurred in the Newcastle Infectious Diseases Hospital.

^c 559: 1.—The 6 deaths from diphtheria occurred in Frudhoe parish.

^d 562: 1.—Of the 13 deaths from enteric fever, 11 belonged to the Borough of Morpeth.

^a 2.—The 19 deaths from measles (10 of which were registered during February and 8 during March) occurred in Llanfyllin, Rhoslanarchrugog, and Penycae parishes.

^a 3.—The 16 deaths from measles occurred in Holyhead Urban District.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 31ST MARCH, 1902.

Changes in Registration boundaries are made by order of the Registrar-General, with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

Date when change came into operation.	DISTRICT and Sub-district.				Name of Parish transferred.	Popu-lation, 1901.

METEOROLOGY OF ENGLAND.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING
MARCH 31ST, 1902.*By* JAMES GLAISHER, ESQ., F.R.S., &c.

The weather in January was for the most part dull and mild, with frequent rain at the beginning and towards the end of the month. The mean high day temperature of the air was $2^{\circ}\cdot 9$, and the mean low night temperature $3^{\circ}\cdot 6$ above their averages. The mean daily temperature of the air was generally below its average from the 13th to the 15th, and from the 25th to the 31st, and generally above from the 1st to the 12th, and from the 16th to the 21st, being as much as 10° , $10^{\circ}\cdot 3$, $12^{\circ}\cdot 7$, $10^{\circ}\cdot 5$, and $10^{\circ}\cdot 7$ in excess on the 2nd, 4th, 10th, 21st and 22nd respectively. The atmospheric pressure was above its average from the 5th to the 23rd, and from the 29th to the end of the month, being particularly so on the 7th, 14th, 15th, 16th, and 31st, when it was as much as $0\cdot 72$ inch, $0\cdot 78$ inch, $0\cdot 91$ inch, $0\cdot 78$ inch, and $0\cdot 73$ inch respectively in excess; and generally below its average from the 1st to the 4th, and from the 24th to the 28th, being as much as $0\cdot 52$ inch, $0\cdot 56$ inch, $0\cdot 65$ inch and $0\cdot 65$ inch below on the 2nd, 24th, 25th and 28th respectively. The fall of rain was somewhat below its average at all stations; at Greenwich the fall for the month was $0\cdot 64$ inch or $1\cdot 19$ inch below its average. The S. and W. winds were prevalent during the greater portion of the month.

The weather in February was mostly cold, dull and cheerless, rain falling frequently at the end of the month. The mean high day temperature of the air was $5^{\circ}\cdot 0$, and the mean low night temperature $3^{\circ}\cdot 5$ below their averages. The nights were cold throughout the month, and at some stations extremely low temperatures were recorded, viz.:— $5^{\circ}\cdot 0$ on the 11th at Stonhurst; $5^{\circ}\cdot 0$ on the 14th at Carlisle, $7^{\circ}\cdot 0$ on the 16th at Barnet, $7^{\circ}\cdot 6$ on the 14th at Llangammarch Wells, and $8^{\circ}\cdot 5$ on the same date at Croydon. The mean daily temperature of the air was above its average from the 22nd to the 28th, and below on all other days, being particularly so on the 12th, 15th, and 16th, when it was as much as 10° , $11^{\circ}\cdot 1$, and $14^{\circ}\cdot 5$, respectively, below. The atmospheric pressure was below its average from the 6th to the 13th, and from the 22nd to the 28th, and generally above from the 1st to the 5th, and from the 14th to the 21st. The fall of rain was below its average at all stations; at Greenwich the fall for the month was $0\cdot 79$ inch or $0\cdot 76$ inch below its average. The N. and E. winds were prevalent on 20 days during the month.

The weather in March was generally mild and dull, with very little sunshine. The mean high day temperature of the air was $2^{\circ}\cdot 2$, and the mean low night temperature $2^{\circ}\cdot 4$ above their averages. The mean daily temperature of the air was below its average from the 4th to the 6th, and from the 22nd to the 26th, and generally above on all other days. The atmospheric pressure was above its average from the 3rd to the 5th, and from the 16th to the 18th, and generally below on all other days, being particularly so on the 20th, 21st, and 22nd, when it was as much as $0\cdot 60$ inch, $0\cdot 68$ inch, and $0\cdot 64$ inch, respectively, below. The fall of rain was a little below its average at all stations; at Greenwich the fall for the month was $1\cdot 36$ inch, or $0\cdot 20$ inch below its average. The S. and W. winds were prevalent on 24 days during the month.

About London the mean daily temperature of the air was above its average from January 1st to the 12th, being particularly so on the 2nd, 4th, and 10th, when it was as much as $10^{\circ}\cdot 0$, $10^{\circ}\cdot 3$, and $12^{\circ}\cdot 7$, respectively in excess; the mean daily excess for the 12 days being $7^{\circ}\cdot 8$; from January 13th to the 15th it was below, the mean daily deficiency being $4^{\circ}\cdot 4$; from January 16th to the 24th it was generally above, being as much as $10^{\circ}\cdot 5$ and $10^{\circ}\cdot 7$ in excess on January 21st and 22nd, respectively; the mean daily excess for the 9 days being $4^{\circ}\cdot 9$; from January 25th to February 21st it was generally below, being particularly so on February 12th, 13th, 14th, 15th, 16th, and 17th, when it was as much as $10^{\circ}\cdot 0$, $9^{\circ}\cdot 5$, $9^{\circ}\cdot 3$, $11^{\circ}\cdot 1$, $14^{\circ}\cdot 5$, and $9^{\circ}\cdot 7$, respectively, below; the mean daily deficiency for the 28 days ending February 21st was $6^{\circ}\cdot 0$; from February 22nd to March 3rd it was above, the mean daily excess being $3^{\circ}\cdot 9$; from March 4th to the 6th it was below, the mean daily deficiency being $3^{\circ}\cdot 4$; from March 7th to the 21st the weather was very mild, and the temperature of the air above its average, the mean daily excess for these 15 days being $4^{\circ}\cdot 8$; from March 22nd to the 26th it was below, the mean daily deficiency was $1^{\circ}\cdot 1$, and from March 27th to the 31st it was generally above its average, the mean daily excess being $3^{\circ}\cdot 4$.

The mean temperature of the air for January was $41^{\circ}\cdot 8$, being $5^{\circ}\cdot 0$ and $3^{\circ}\cdot 4$ above the average of 181 and 61 years, respectively; it was $3^{\circ}\cdot 1$ and $1^{\circ}\cdot 3$ higher than in 1901 and 1900, respectively; and $0^{\circ}\cdot 9$ lower than in 1899.

The mean temperature of the air for February was $35^{\circ}2$, being $3^{\circ}6$ and $4^{\circ}2$ below the average of 131 and 61 years, respectively; it was $0^{\circ}5$, $3^{\circ}0$, and $6^{\circ}7$ lower than in 1901, 1900, and 1899, respectively.

The mean temperature of the air for March was $44^{\circ}4$, being $3^{\circ}3$ and $2^{\circ}8$ above the average of 131 and 61 years, respectively; it was $5^{\circ}4$, $5^{\circ}6$ and $3^{\circ}6$ higher than in 1901, 1900 and 1899, respectively.

The mean high day temperature of the air for January was $45^{\circ}7$, being $2^{\circ}9$ above the average of 61 years; it was $2^{\circ}5$ and $0^{\circ}7$ higher than in 1901 and 1900, respectively; and $1^{\circ}8$ lower than in 1899.

NOTE.—In reading this table it will be borne in mind that the plus sign (+) signifies above the average, and the minus sign (−) signifies below the average.

Average duration of the different directions of the wind referred to eight points of the compass, and duration in days in each direction in each month in the quarter, were as follows:—

Direction of Wind.	JANUARY.			FEBRUARY.			MARCH.		
	1902.	Average.	Departure from Average.	1902.	Average.	Departure from Average.	1902.	Average.	Departure from Average.
N.W.	d. 4	d. 1½	+ 2½	d. 2	d. 2½	- ½	d. 2	d. 3	- 1
N.	2	3½	- 1½	3	3	0	1	4	- 3
N.E.	2	3½	- 1½	11	4	+ 7	2	2	- 2
E.	0	4	- 4	3	2	+ 1	1	3	- 1
S.E.	1	3½	- 2½	4	1½	+ 2½	1	2½	- 1½
S.	8	4½	+ 3½	2	3	- 1	5	3	+ 2
S.W.	12	9½	+ 2½	2	9	- 7	13	8	+ 5
W.	2	4½	- 2½	1	3	- 2	5	3½	+ 1½

The sign (+) denotes excesses over averages; the numbers affected by this sign in January are S., N.W., and S.W.; in February are N.E., S.E., and E.; and in March are S.W., S., and W.

The sign (−) denotes deficiencies below averages; the numbers affected by this sign in January are S.E., W., and N.; in February are S.W., W., and S.; and in March are N., N.E., and S.E.

The mean high day temperature of the air for February was $40^{\circ}2$, being $5^{\circ}0$ below the average of 61 years; it was $0^{\circ}1$ higher than in 1901, and $3^{\circ}3$ and $8^{\circ}1$ lower than in 1900 and 1899, respectively; and there were only 8 instances of as low or lower mean high day temperature for the month of February back to the year 1841, viz. :—

1901 it was $40^{\circ}1$.	1886 it was $38^{\circ}0$.	1845 it was $38^{\circ}4$.
1895 it was $35^{\circ}2$.	1855 it was $35^{\circ}7$.	1843 it was $40^{\circ}2$.
1888 it was $39^{\circ}3$.	1853 it was $39^{\circ}1$.	

The mean high day temperature of the air for March was $51^{\circ}9$, being $2^{\circ}2$ above the average of 61 years; it was $6^{\circ}9$, $6^{\circ}9$, and $2^{\circ}0$ higher than in 1901, 1900 and 1899, respectively.

The mean low night temperature of the air for January was $37^{\circ}2$, being $3^{\circ}6$ above the average of 61 years; it was $3^{\circ}7$ and $2^{\circ}1$ higher than in 1901 and 1900, respectively; and $0^{\circ}3$ lower than in 1899; and there were only 8 instances of as high or higher mean low night temperature for the month of January back to the year 1841, viz. :—

1899 it was $37^{\circ}5$.	1875 it was $38^{\circ}8$.	1851 it was $38^{\circ}1$.
1890 it was $38^{\circ}2$.	1873 it was $38^{\circ}0$.	1846 it was $39^{\circ}4$.
1884 it was $39^{\circ}2$.	1853 it was $37^{\circ}5$.	

The mean low night temperature of the air for February was $30^{\circ}6$, being $3^{\circ}5$ below the average of 61 years; it was $0^{\circ}6$, $2^{\circ}6$, and $5^{\circ}1$ lower than in 1901, 1900, and 1899, respectively; and there were only 9 instances of as low or lower mean low night temperature for the month of February back to the year 1841, viz. :—

1895 it was $22^{\circ}8$.	1860 it was $30^{\circ}1$.	1853 it was $29^{\circ}0$.
1886 it was $29^{\circ}8$.	1858 it was $29^{\circ}8$.	1847 it was $30^{\circ}5$.
1875 it was $30^{\circ}6$.	1855 it was $24^{\circ}2$.	1845 it was $27^{\circ}9$.

The mean low night temperature of the air for March was $37^{\circ}4$, being $2^{\circ}4$ above the average of 61 years; it was $3^{\circ}6$, $3^{\circ}9$, and $4^{\circ}9$ higher than in 1901, 1900, and 1899, respectively.

The mean daily range of temperature for January was $8^{\circ}5$, being $0^{\circ}9$ smaller than the average; in February it was $9^{\circ}6$, being $1^{\circ}4$ smaller than the average; and in March it was $14^{\circ}5$, being $0^{\circ}2$ smaller than the average.

The mean temperature of the air for January was $1^{\circ}9$ warmer than in December; in February it was $6^{\circ}6$ colder than in January; and in March it was $9^{\circ}2$ warmer than in February.

(From the preceding 61 years' observations the decrease from December to January is $1^{\circ}4$; the increase from January to February is $1^{\circ}0$; and the increase from February to March is $2^{\circ}2$).

From December to January there was an increase of temperature at all stations; at those south of 51° of $1^{\circ}0$; between 51° and 52° of $2^{\circ}1$; between 52° and 53° of $2^{\circ}7$; and at stations north of this parallel an increase of $1^{\circ}9$.

From January to February there was a decrease of $5^{\circ}8$ at stations south of 51° ; between 51° and 53° of $6^{\circ}4$; and at stations north of this parallel a decrease of $6^{\circ}0$.

From February to March there was an increase of $8^{\circ}1$ at stations south of 51° ; between 51° and 52° of $9^{\circ}2$; between 52° and 53° of $10^{\circ}5$; and at stations north of this parallel an increase of $7^{\circ}4$.

The mean reading of the barometer at the height of 159 ft. above the sea level, for the month of January, was 29.985 inches, being 0.213 inch above the average of 61 years; it was 0.125 inch, 0.239 inch, and 0.330 inch higher than in 1901, 1900, and 1899, respectively.

The mean reading of the barometer for the month of February was 29.691 inches, being 0.112 inch below the average of 61 years; it was 0.190 inch lower than in 1901; 0.289 inch higher than in 1900, and 0.041 inch lower than in 1899.

The mean reading of the barometer for the month of March was 29.683 inches, being 0.062 inch below the average of 61 years; it was 0.091 inch higher than in 1901; and 0.152 inch and 0.228 inch lower than in 1900 and 1899, respectively.

From December to January there was an increase of atmospheric pressure at all stations of about 0.51 inch.

From January to February there was a decrease of 0·37 inch at stations south of 51°; between 51° and 52° of 0·30 inch; between 52° and 53° of 0·26 inch; and at stations north of this parallel a decrease of 0·18 inch.

From February to March there was an increase of 0·06 inch at stations south of 51°; between 51° and 52° a decrease of 0·01 inch; between 52° and 53° a decrease of 0·04 inch; and at stations north of this parallel a decrease of 0·10 inch.

About London the atmospheric pressure was generally below its average from January 1st to the 4th, the mean daily deficiency being 0·19 inch; from January 5th to the 23rd it was above, being particularly so on the 7th, 14th, 15th and 16th, when it was as much as 0·72 inch, 0·78 inch, 0·91 inch, and 0·78 inch, respectively in excess; and on several other days during this period the reading was more than half an inch in excess; the mean daily excess for the 19 days ending January 23rd being 0·47 inch; from January 24th to the 28th it was below, being as much as 0·56 inch, 0·65 inch, and 0·65 inch below on the 24th, 25th and 28th respectively; the mean daily deficiency for the five days ending January 28th was 0·48 inch; from January 29th to February 5th it was above, being as much as 0·56 inch, 0·73 inch, and 0·55 inch in excess on January 30th, 31st, and February 1st respectively; the mean daily excess for the eight days was 0·31 inch; from February 6th to the 13th it was below, the mean daily deficiency being 0·31 inch; from February 14th to 21st it was generally above, the mean daily excess being 0·13 inch; from February 22nd to March 2nd it was below, being as much as 0·67 inch below on February 27th, the mean daily deficiency being 0·32 inch; from March 3rd to the 5th it was above, the mean daily excess being 0·02 inch; from March 6th to the 15th it was below, the mean daily deficiency being 0·13 inch; from March 16th to the 18th it was above, the mean daily excess being 0·14 inch; and from March 19th to the 31st it was generally below, being as much as 0·60 inch, 0·68 inch, 0·64 inch, and 0·53 inch below on the 29th, 21st, 22nd, and 24th respectively; the mean daily deficiency for the 13 days ending March 31st was 0·29 inch.

Thunderstorms occurred in March on the 20th at Halifax; and on the 23rd at Osborne.

Thunder was heard but lightning was not seen in March on the 20th at Stonyhurst; and on the 23rd at Bath.

Lightning was seen but thunder was not heard in January on the 23rd at Ventnor.

In March on the 13th at Halifax; on the 20th at Stonyhurst; and on the 23rd at Ventnor.

Solar Halos were seen in January on the 13th at the Royal Observatory and Oxford; on the 14th at Osborne, Royal Observatory, and Oxford; and on the 16th at Oxford.

In February on the 14th at Halifax; and on the 22nd at Osborne, Oxford, and Halifax.

In March on the 1st, 3rd, and 6th at Halifax; on the 8th at Oxford; on the 12th at the Royal Observatory; on the 13th at Osborne, Royal Observatory, Oxford, and Halifax; on the 14th at the Royal Observatory; on the 24th at Osborne, the Royal Observatory, and Oxford; on the 25th at the Royal Observatory; on the 26th at Oxford; on the 28th at Oxford and Halifax; and on the 31st at Halifax.

Lunar Halos were seen in January on the 18th at Osborne and Oxford; on the 19th at Oxford; and on the 24th at the Royal Observatory and Oxford.

In February on the 15th at Truro; on the 16th at Truro and Stonyhurst; on the 17th at Truro; and on the 21st at Guernsey.

In March on the 15th at Osborne and Oxford; and on the 16th at Osborne, the Royal Observatory, Oxford, Halifax, and Stonyhurst.

Snow fell in January on the 11th at Halifax and Stonyhurst; on the 15th, 22nd, and 23rd at Halifax; on the 24th at Eastbourne, Oxford, Liverpool, Halifax, Leeds, Stonyhurst, and Carlisle; on the 25th at Eastbourne, Oxford, Hereford, Liverpool, Halifax, and Stonyhurst; on the 26th at Oxford, Hereford, Liverpool, Halifax, and Stonyhurst; on the 27th at Cambridge, Halifax, Leeds, and Stonyhurst; on the 28th at Osborne and Halifax; on the 29th at the Royal Observatory, Hereford, Halifax, and Stonyhurst; on the 30th at Ventnor, Eastbourne, Salisbury, Oxford, and Cambridge; and on the 31st at Ventnor and Eastbourne.

In February on the 2nd at Truro, Ventnor, Eastbourne, and Osborne; on the 3rd at Truro, Osborne, Portsmouth, Salisbury, Croydon, Royal Observatory, Oxford, Cambridge, and Halifax; on the 4th at Oxford and Stonyhurst; on the 6th at Stonyhurst and Carlisle; on the 7th at Ventnor, Eastbourne, Royal Observatory, Stonyhurst, and Carlisle; on the 8th at Salisbury, Royal Observatory, Oxford, Cambridge, Halifax, Leeds, and Stonyhurst; on the 9th at Guernsey, Truro, Halifax, Leeds, and Stonyhurst; on the 10th at Truro, Eastbourne, and Halifax; on the 11th at Oxford, Halifax, and Stonyhurst; on the 12th at Stonyhurst; on the 13th at Halifax; on the 14th at the Royal Observatory; on the 15th at Eastbourne, Croydon, and Cambridge; on the 18th at Oxford; and on the 27th at Halifax.

In March on the 20th at Halifax ; on the 21st at Croydon, Halifax, and Stonyhurst ; on the 22nd at Halifax ; on the 23rd, 24th, and 26th at Halifax and Stonyhurst ; on the 28th at Osborne ; and on the 30th and 31st at Ventnor.

Hail fell in January on the 24th at Guernsey, Truro, Eastbourne, Osborne, Portsmouth, Salisbury, Liverpool, Halifax, and Stonyhurst ; on the 25th at Truro, Eastbourne, and Stonyhurst ; on the 26th at Liverpool and Stonyhurst ; on the 27th at Stonyhurst ; on the 28th at Guernsey, Osborne, and Stonyhurst ; and on the 29th and 30th at Stonyhurst.

In February on the 8th at Ventnor ; on the 13th, 18th, and 25th, at Oxford ; and on the 27th at Truro and Cambridge.

In March on the 20th at the Royal Observatory, Halifax, Leeds, and Stonyhurst ; on the 21st at Ventnor, Croydon, Oxford, Halifax, and Stonyhurst ; on the 22nd at Truro and Halifax ; on the 23rd at Osborne ; on the 24th at Guernsey and Halifax ; on the 25th at Leeds ; on the 26th at Osborne and Stonyhurst ; and on the 28th at Guernsey.

Fog prevailed in January on the 7th at Truro ; on the 11th at Hereford ; on the 15th at Truro ; on the 17th at Eastbourne and Stonyhurst ; on the 18th at Truro, Eastbourne, Oxford, and Stonyhurst ; on the 19th at Truro, Eastbourne and Portsmouth ; on the 23rd at Truro, Portsmouth and Oxford ; and on the 27th at Cambridge.

In February on the 4th at the Royal Observatory ; on the 5th and 7th at Truro ; on the 8th at Cambridge ; on the 10th at Truro and Eastbourne ; on the 11th at Truro ; on the 12th at Truro and Cambridge ; on the 13th at Truro ; on the 14th at Truro, Cambridge and Stonyhurst ; on the 15th, 16th and 17th at Halifax ; on the 18th at Truro, Eastbourne, Cambridge, and Halifax ; on the 19th and 20th at Halifax ; on the 21st at Truro, Eastbourne and Cambridge ; on the 22nd at Cambridge ; on the 24th at Eastbourne ; and on the 25th at Eastbourne, Osborne, Portsmouth, and Halifax.

In March on the 1st at Oxford, Cambridge, and Leeds ; on the 3rd at Guernsey and Ventnor ; on the 4th at Guernsey, Osborne, Oxford, and Halifax ; on the 5th at Osborne, Oxford, Halifax, Leeds and Stonyhurst ; on the 6th at Croydon, Oxford, Cambridge, Halifax, and Stonyhurst ; on the 7th at Guernsey, Portsmouth, Croydon, and Stonyhurst ; on the 8th, 9th, 10th, and 11th, at Guernsey ; on the 13th at Oxford ; on the 16th at the Royal Observatory ; on the 27th at Guernsey and Leeds ; and on the 28th, 29th, 30th, and 31st, at Guernsey.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING MARCH 31st, 1902

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the seventh edition of his Hygrometrical Tables.

NAMES OF STATIONS AND OBSERVERS.	Height of Station above Sea Level.	Year 1902.	Pressure of Atmosphere in Month.		Temperature of Air in Month.			Mean Temperature.	Air.	Dew Point.	Elastic Force.	Vapour.		Mean Degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Thermometer.		Wind.			Mean Amount of Cloud.	Mean Amount of Ozone.	Rain.				
			Mean.	Range.	Highest.	Lowest.	Range.					Of all Highest.	Of all Lowest.			Mean.	Daily Range.	Minimum on Grass.	Maximum in Rays of Sun.	Estimated Strength.				Relative Proportion of.

The highest temperatures of the air were at Barnet, 63°·5; at Lids, 65°·0; and at Camden Square and Hereford, 65°·2.
The lowest temperatures of the air were at Stonyhurst and Carlisle, 58°·0; at Barnet, 70°·0; and at Llangamarch Wells, 70°·6.
The greatest ranges of temperature were at Barnet, 56°·5; at Llangamarch Wells, 54°·4; and at Carlisle, 55°·0.
The least ranges of temperature were at Guernsey, 23°·0; at Portsmouth, 34°·0; and at Ventnor, 35°·6.
The greatest number of days of rain were at Llandudno, 62; at Carlisle, 59; and at Stonyhurst, 55.
The least number of days of rain were at Portsmouth and Cambridge, 26; at Croydon, 27; and at Hereford, 28.
The greatest falls of rain were at Stonyhurst, 9·99 inches; at Llangamarch Wells, 8·02 inches; and at Truro, 7·71 inches.
The least falls of rain were at Cambridge, 2·38 inches; at the Royal Observatory, 2·79 inches; and at Leeds, 3·00 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

PARALLELS OF LATITUDE, &c.		Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Read- ings of the Thermometer.	Mean of all Lowest Read- ings of the Thermometer.	Mean Range of Temper- ature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maxi- mum in Days of Sun.	Mean Reading of Mini- mum on Grass.	Mean Estimated Strength.	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.	Mean number of Foggy Days.

No. 214.] **Marriages**—*January, February, March, 1902.*
Births and Deaths—*April, May, June, 1902.*

[Price 9d.]

*General Register Office, Somerset House,
24th July, 1902.*

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1902 is estimated at 41,952,510 persons; that of England and Wales at 32,995,614, that of Scotland at 4,531,299, and that of Ireland at 4,425,597.

In the United Kingdom 298,122 *births* and 173,513 *deaths* were registered in the three months ended 30th June 1902. The natural increase of population was, therefore, 124,609. The number of *persons married* in the quarter ended 31st March 1902 was 135,172.

The birth-rate in the United Kingdom in the *second* quarter of 1902 was 28·5, and the death-rate 16·6, per 1000. The marriage-rate in the *first* quarter of 1902 was 12·9 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Emigration.

According to the returns issued by the Board of Trade, it appears that 112,025 emigrants embarked during last quarter, from the several ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 931 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom

numbered 54,947, of whom 30,897 were English, 7,183 Scottish, and 16,867 Irish, whilst 57,078 others were of foreign nationality. The proportions of emigrants accredited to the several parts of the United Kingdom, per million of the respective estimated populations, were as follows:—England, 936; Scotland, 1,585; and Ireland, 3,811. Compared with the averages in the three preceding second quarters, the proportion of English emigrants showed an increase of 24·0 per cent., that of Scottish emigrants an increase of 51·4 per cent., and that of Irish emigrants a decrease of 13·0 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,063 registration sub-districts of England and Wales during the three months ended 30th June 1902; and the MARRIAGES in 15,414 churches or chapels, in 13,220 registered places of worship unconnected with the Established Church, and in 636 Superintendent Registrars' Offices, during the three months ended 31st March 1902.

Marriages.

During the *first* quarter of 1902 the marriages of 107,792 persons were registered, being equal to an annual rate of 13·2 persons married per 1000 of the estimated population, against an average rate of 11·4 per 1000 in the first quarters of the ten years 1892–1901.

Among registration counties the lowest marriage-rates were 10·0 in Westmorland, 10·1 in Huntingdonshire, 10·2 in Herefordshire, 10·3 in Cambridgeshire, and 10·5 in Middlesex; the highest rates were 14·4 in London and in Warwickshire, 14·5 in Nottinghamshire and in South Wales, 14·6 in Lancashire, 14·7 in Northumberland, 14·8 in Monmouthshire, and 15·5 in Durham.

Births.

The births registered in the *second* quarter of 1902 numbered 236,874, and were in the proportion of 28·8 annually per 1000 of the population, the mean rate in the ten preceding second quarters having been 30·0. The rate last quarter is the lowest for the corresponding quarter of any year on record, except the immediately preceding year 1901. In registration counties the lowest birth-rates during the quarter were 22·8 in Dorsetshire, 22·9 in Sussex and in Westmorland, and 23·1 in Berkshire and in Hertfordshire; the highest rates were 33·3 in South Wales and in Northumberland, 33·8 in Staffordshire, 36·2 in Durham, and 36·8 in Monmouthshire.

In 76 great towns the birth-rate averaged 29·7 per 1000, ranging from 17·3 in Hastings, 19·1 in Bournemouth, 20·8 in Hornsey, 20·9 in Bury, and 22·5 in Halifax, to 37·2 in St. Helens, 37·3 in Middlesbrough, 37·7 in Gateshead, 39·4 in Rhondda, and 39·6 in West Hartlepool. In 103 smaller towns the mean birth-rate was 27·6 per 1000, whilst in the remainder of England and Wales, excluding these 179 towns, it was 28·1.

Natural Increase of Population

The natural increase of population in England and Wales during the quarter, by excess of births over deaths, was 104,633, against 107,660, 93,081, and 104,928, in the second quarters of 1899, 1900, and 1901 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 26s. 11d., 26s. 7d., and 27s. 3d. respectively in the preceding three quarters, was 29s. 10d. last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4½d.; of prime beef, 7½d.; of inferior mutton, 5½d.; of prime mutton, 9d. Compared with the average prices in the preceding three months, the mean price of inferior beef increased by 1d., and the price of prime beef by ½d.; the mean price of inferior mutton increased by ½d., and that of prime mutton by ½d. The average price in the London Market of sea-borne coal, put in barge from the collier in the Thames, was 17s. 4d. per ton, against 21s. 4d. and 18s. 11d. per ton in the second quarters of 1900 and 1901 respectively. The mean price of 2½% Consols was 95l. 9s. 2d., having been 94l. 3s. 8d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been reduced on 6th February from 3½% to 3%, remained unchanged throughout last quarter.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 694,433, of whom 206,911 received in-door, and 487,522 out-door, relief. The proportion of the population in receipt of poor-law relief was 21.0 per 1000, against 20.8 and 21.0 per 1000, respectively, in the second quarters of 1900 and 1901.

Meteorology.

Remarks by W. N. Shaw, Esq., M.A., F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 75-84.

The weather in April was changeable, but mainly fair and dry; in May it was for the most part cold and changeable, except during a short period which began about the close of the third week; and in June it was very cool and unseasonable until the last week of the quarter. At Greenwich the mean reading of the barometer during the quarter was 29.663 inches, the highest reading of the thermometer was 80°.7, the lowest 29°.8, and the mean temperature of the air 51° 0. At 27 other stations of observation the mean temperature of the air during the quarter ranged from 48° 2 at one of the stations in Halifax, and 48° 7 at Llangammarch Wells and at Wolverhampton, to 52° 1 at Portsmouth, 52° 2 at Truro and at Cambridge, and 53° 0 at Camden Square.

The amount of rain measured during the quarter at the Royal Observatory was 6.85 inches, of which 0.42 of an inch fell in April, 3.33 inches in May, and 3.10 inches in June. At 27 other stations of observation, the rainfall during the quarter ranged from 4.70 inches at Oxford, 5.18 inches at Nottingham, and 5.72 inches at Carlisle, to 7.68 inches in Guernsey, 7.99 inches at Llangammarch Wells, and 8.04 inches at Salisbury.

The duration of bright sunshine recorded at the Royal Observatory was 462.7 hours, being 33.3 per cent. of the time during which the sun was above the horizon; the mean proportion in the ten preceding second quarters having been 37.7 per cent. The duration of bright sunshine fell below the average in each month of the quarter; the deficiency being 19.7 hours in April, 36.4 hours in May, and 5.1 hours in June.

Deaths.

The deaths registered in England and Wales last quarter numbered 132,241, and were in the proportion of 16·1 annually per 1000 persons living, the average rate in the ten preceding second quarters having been 16·8. In registration counties the death-rates ranged from 12·1 in Surrey, 12·3 in Rutlandshire, and 12·6 in Hertfordshire and in Bedfordshire, to 18·0 in Cornwall, 18·1 in the North Riding of Yorkshire, in Durham, and in Northumberland, 18·9 in Lancashire, and 19·1 in North Wales.

The 132,241 registered deaths included 69,213 of males and 63,028 of females, the death-rate among males being 17·4, and that among females 14·8, per 1000 of the estimated populations of the respective sexes. Compared with the averages in the ten preceding second quarters the death-rate both of males and of females showed a decrease of 0·7 per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 117 is to 100, against a proportion of 116 to 100 in the second quarters of the ten preceding years.

Urban and Rural Mortality.

In 76 great towns, of which the aggregate population in the middle of 1902 is estimated at nearly fifteen millions, the death-rate was 16·6 per 1000 living, or 0·5 in excess of the death-rate in the whole country. The rates in the several towns ranged from 8·3 in Hornsey, 10·3 in East Ham, 10·5 in Walthamstow, 10·9 in Bournemouth, 11·1 in Handsworth, and 11·2 in King's Norton, to 20·9 in Rochdale, 21·3 in Oldham, 21·4 in Liverpool, 21·5 in Middlesbrough, 22·4 in Merthyr Tydfil, and 22·7 in Wigan.

In 103 smaller towns, with an aggregate population estimated at more than three and a half millions in the middle of 1902, the death-rate was 15·1 per 1000 living, or 1·5 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with a population of nearly fourteen and a half millions of persons, of whom nearly seven millions live in small towns, and nearly seven and a half millions in rural districts, the death-rate was 15·8.

Watering Places and Summer Resorts.

The deaths registered last quarter from all causes, and from each of the more important epidemic diseases, in those urban districts which are most nearly co-terminous with our chief watering places, are shown in Table XI. For purposes of comparison, the populations at the census of 1901 are also shown.

Mortality at Different Ages.

Of the 132,241 deaths registered last quarter, 28,393 were those of infants under one year of age, 62,556 those of persons aged between one year and sixty years, and 41,292 those of persons aged sixty years and upwards.

The mortality of infants, measured by the proportion of deaths under one year of age to registered births, was 120 per 1000, the average in the ten preceding second quarters having been 125. In registration counties the lowest proportions per 1000 births were 61 in Rutlandshire, 71 in

Hertfordshire, 72 in Dorsetshire, and 79 in Westmorland; the highest proportions were 130 in Warwickshire and in Lincolnshire, 134 in the West Riding of Yorkshire, 137 in Durham, 138 in Lancashire and in the North Riding of Yorkshire, and 152 in Cornwall.

In the 76 great towns infant mortality averaged 127 per 1000 births, being 7 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 73 per 1000 in Coventry, 79 in Hornsey, 82 in Wallasey, and 85 in Devonport; the highest were 158 in Rhondda, 159 in Blackburn, 160 in Wigan, 164 in Middlesbrough, 169 in Barrow in Furness, and 181 in Burnley. Among the 103 smaller towns infant mortality averaged 118 per 1000 births, ranging from 55 in Ramsgate, 60 in Maidstone, 63 in Watford, 65 in Southend on Sea, and 67 in Bromley and in Peterborough, to 175 in Dewsbury, 178 in Cambridge, 185 in Farnworth, 193 in Batley, 209 in Hyde, and 234 in Stalybridge. Excluding these 179 towns, infant mortality in the remainder of England and Wales was in the proportion of 112 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 8·4 per 1000 of the estimated population at this group of ages, being 0·7 below the mean rate in the ten preceding second quarters. Among persons aged sixty years and upwards the mortality was at the annual rate of 67·9 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding second quarters having been 65·8.

Compared with the mean rates in the ten preceding second quarters, the mortality of infants under one year of age showed a decrease of 4·0 per cent., that of persons between one year and sixty years of age a decrease of 7·7 per cent., and that of persons aged sixty years and upwards an increase of 3·2 per cent.

Mortality from certain Epidemic Diseases.

The 132,241 deaths from all causes include—

3,447	that were attributed to	measles,
2,821	"	" whooping-cough,
1,714	"	" diphtheria,
1,267	"	" diarrhœa,
1,107	"	" scarlet fever,
1,054	"	" small-pox,
and 837	"	" "fever."

Thus, to the above-mentioned epidemic diseases in the aggregate, 12,247 deaths were referred during the quarter, being in the proportion of 1·48 annually per 1000 of the population, or 0·11 below the mean proportion in the second quarters of the preceding ten years.

The mortality from small-pox was above the corrected average in the corresponding quarters of the preceding ten years, that from measles, scarlet fever, whooping-cough, "fever," and diarrhœa was below, and that from diphtheria was equal to, that average.

The deaths attributed to *measles* were 3447 in number, corresponding to an annual mortality of 0·42 per 1000 of the population, or 0·05 below the corrected average rate in the second quarters of the previous ten years. No

deaths from measles were returned during the quarter in Westmorland, and the rate of mortality from this disease did not exceed 0·02 per 1000 either in Suffolk or in Cumberland. In other English counties the rate rose to 0·63 in London, 0·68 in the West Riding of Yorkshire, 0·98 in Cambridgeshire, 1·04 in Huntingdonshire, and 1·13 in Monmouthshire. In the 76 great towns of England and Wales measles caused an average death-rate of 0·50 per 1000, which is the same as the rate in the preceding quarter. No deaths from measles were recorded last quarter in any of the following great towns:—Hastings, Ipswich, Handsworth, King's Norton, Coventry, Bootle, Warrington, Tynemouth, and Swansea. In the other great towns the measles death-rate ranged upwards to 2·06 in Rhondda, 2·40 in Burnley, and 3·64 in Barrow in Furness. In the 103 smaller towns measles was fatal in the average proportion of 0·53 per 1000, and among these towns the disease was especially fatal in Cambridge, Wakefield, Batley, Jarrow, Acton, Mountain Ash, Stalybridge, and Hyde. In the remainder of England and Wales the average death-rate from measles was 0·31 per 1000. Among registration districts and sub-districts outside the 179 chief towns the mortality from measles was excessive in Windsor, Iver, Crowan, Twerton, Ashton in Makerfield, Stanley, Thornaby, Blaenavon, Tredegar, and Aberystwith.

Whooping-cough was the registered cause of death in 2821 instances during the quarter, giving rise to a death-rate of 0·34 annually per 1000 of the population, which is lower by 0·06 per 1000 than the corrected average rate from this disease in the second quarter of the previous ten years. Rutlandshire was free from fatal whooping-cough throughout the quarter, and the rate of mortality from this disease did not exceed 0·05 per 1000 in the counties of Hereford, Buckingham, and Bedford. The counties in which whooping-cough was most fatal were Northumberland 0·65, Warwickshire 0·68, and Cornwall 0·87 per 1000. Among the 76 great towns, whooping-cough was fatal at the average rate of 0·45 per 1000 living. Reading, Ipswich, Rotherham, and Swansea were free from fatal whooping-cough during the quarter, and the disease caused a mortality which did not exceed 0·06 per 1000 either in Hornsey, Hastings, Newport (Mon.), or Merthyr Tydfil. Among the remaining great towns the rate rose to 1·94 per 1000 in South Shields and 2·06 in Barrow in Furness. In the 103 smaller towns the mortality from this disease averaged 0·24 per 1000; it was especially high in Acton, Ashton under Lyne, Doncaster, Tipton, Eccles, Gillingham, and Worcester. In the remainder of England and Wales whooping-cough accounted for an average death-rate of 0·26 per 1000. Among registration districts and sub-districts outside the 179 chief towns, the mortality from this disease was excessive in St. Clement (Cornwall), Kenwyn, Illogan, Pickering, Epworth, Earsdon, and Margam.

Diphtheria (exclusive of "*croup*," unless stated to be *membranous*) was returned as the cause of death in 1714 instances during the quarter, the deaths so returned being equal to an annual rate of 0·21 per 1000, which is the same as the decennial average rate for the second quarter of the year. No deaths from this disease were returned from Huntingdonshire or from Westmorland. In other counties the lowest death-rate from this disease was 0·04 both in Herefordshire and in Rutlandshire; the highest rates being 0·32 in Staffordshire, 0·35 in the North Riding of Yorkshire and in South Wales, and 0·36 in Cumberland. Among the 76 great towns diphtheria caused an average annual mortality of 0·23 per 1000 last quarter. No deaths from this disease were recorded in Bournemouth or in Tynemouth, and the rate of mortality therefrom did not exceed 0·05 per 1000 in Hornsey, Derby, or Huddersfield. In the other great towns the proportion ranged upwards to 0·56 in Middlesbrough, 0·65 in Rhondda, 0·67 in Coventry, and 1·16 in

Hanley. In the 103 smaller English or Welsh towns diphtheria mortality averaged 0·22 per 1000, and among them the disease was especially fatal in Erith, Kingston on Thames, Lancaster, Widnes, Pontypridd, Carlisle, Stalybridge, and Burslem. In the remainder of England and Wales diphtheria was fatal on the average to 0·18 per 1000 living. Among registration districts and sub-districts outside the 179 chief towns the mortality from diphtheria was excessive in Southminster, Downham, Bolsover, Whitby, Bywell, Milford (Pembrokeshire), and Denbigh.

Diarrhœa was the registered cause of death in 1267 instances during the quarter, equal to a mortality of 0·15 annually per 1000 of the population. No deaths from diarrhœa were reported from Herefordshire or from Rutlandshire, and the diarrhœa death-rate did not exceed 0·02 per 1000 in Bedfordshire. The highest rates were 0·23 in the North Riding of Yorkshire, 0·24 in Warwickshire and in Staffordshire, 0·26 in Huntingdonshire, and 0·31 in Westmorland. In the 76 great towns diarrhœa caused an average mortality of 0·17 per 1000. No deaths were attributed to diarrhœa in Handsworth. In the other great towns the proportions rose to 0·45 per 1000 in Merthyr Tydfil and 0·51 in Hanley. In the 103 smaller towns diarrhœa was fatal on the average to 0·14 per 1000 of the population. Among these towns it showed exceptional fatality in Kingston on Thames, Aberdare, Hyde, Mountain Ash, Longton, Rawtenstall, and Gorton. In the remainder of England and Wales the death-rate from diarrhœa averaged 0·14 per 1000 annually.

Scarlet fever was the registered cause of death in 1107 instances last quarter, corresponding to a death-rate of 0·13 per 1000 annually. The counties of Buckingham, Huntingdon, Bedford, Hereford, and Rutland were free from fatal scarlet fever throughout the period, and the mortality did not exceed 0·01 per 1000 in Suffolk, or in Cornwall. In the counties of Durham, Northumberland, Westmorland, and Lancaster the rates were 0·24, 0·25, 0·25, and 0·27 per 1000 respectively, and the county of Warwick experienced the highest rate, namely, 0·36 per 1000; the last-mentioned county had sustained the highest mortality from this disease in each of the two preceding quarters likewise. In the 76 great towns scarlet fever accounted for a mortality equal to 0·17 per 1000 annually. The disease, in a fatal form, was absent throughout the quarter from the following great towns:—Hornsey, Leyton, Hastings, Brighton, Bournemouth, Southampton, Great Yarmouth, Devonport, Wallasey, and Barrow in Furness. The highest scarlet fever death-rates were 0·55 in West Bromwich, 0·69 in Burnley, and 0·77 in Bolton. In the 103 smaller towns this disease caused an average annual mortality of 0·12 per 1000, the fatality being greatest in Wakefield, Leigh (Lancashire), Jarrow, Hyde, Darlington, Aberdare, and Swinton & Pendlebury. In the remainder of England and Wales it was fatal in the average proportion of 0·10 per 1000. Among registration districts and sub-districts outside the 179 chief towns scarlet fever showed excessive fatality in Banbury, Almondsbury, Sleaford, Kirkham, and Llandebie.

Small-pox caused 1054 deaths last quarter, against 44, 296, and 1121 successively in the three quarters immediately preceding. Of the 1054 deaths from small-pox, 871 belonged to one or other of the 179 towns; of these deaths, 506 were assigned to London, 105 to West Ham, 77 to Edmonton, 49 to Tottenham, 18 to Erith, 14 to East Ham, 13 to Swansea, 7 to Walthamstow, 6 each to Willesden and Leyton, and 5 each to Beckenham, Gravesend, and Enfield. Of the deaths occurring outside the chief towns, 18 belonged to the district of Orsett.

To "fever" (including the three principal forms—*typhus*, *enteric*, and *simple continued fevers*) 837 deaths were referred last quarter, being in the proportion of 0·10 annually per 1000 of the population, as against 0·12 the average rate in the ten previous corresponding quarters. No deaths from "fever" were returned last quarter either from Oxfordshire, Huntingdonshire, Dorsetshire, Herefordshire, Shropshire, or from Westmorland. The highest county rates were 0·16 in Worcestershire, 0·17 in Essex, and 0·18 in Lancashire. In the 76 great towns "fever" was fatal in the average proportion of 0·12 per 1000 of the population. No deaths from "fever" were registered in any of the following 13 great towns:—Hornsey, Tottenham, Hastings, Brighton, Bournemouth, Reading, Plymouth, Burton upon Trent, Bury, Oldham, West Hartlepool, Gateshead, and Newport (Mon.). The highest "fever" rates were 0·36 in Salford, 0·50 in Birkenhead, and 0·51 in St. Helens. In the 103 smaller towns "fever" caused an average death-rate of 0·11 per 1000, and among these towns was exceptionally fatal in Blackpool, Longton, Aberdare, Batley, and Tipton. In the remainder of England and Wales the mortality due to "fever" averaged 0·09 per 1000. Among registration districts and sub-districts outside the 179 chief towns the mortality from "fever" was excessive in Dartmouth, Kirkham, Malton, and Ogmores.

Violent Deaths.

The deaths in England and Wales which were referred to different forms of violence, either accidental or otherwise, numbered 4686 last quarter, and corresponded to an annual rate of 0·57 per 1000 of the population, against an average of 0·61 in the ten preceding second quarters. No deaths from violence were registered in Rutlandshire, and the rate was only 0·17 in Huntingdonshire and 0·28 in Cornwall; but it reached 0·71 in the East Riding of Yorkshire, 0·73 in Durham, 0·74 in Cumberland, and 0·82 in Northumberland. In the 76 great towns the mean rate was 0·62 per 1000 living; among the several towns the rate was only 0·13 in King's Norton and 0·18 in Hastings, but it rose to 0·92 in Tynemouth, 1·03 in West Bromwich, 1·09 in Stockton on Tees, 1·12 in Newcastle upon Tyne, and 1·65 in Merthyr Tydfil.

Certification of Causes of Death.

Of the 132,241 deaths registered in England and Wales last quarter, the causes of 121,380, or 91·8 per cent., were certified by registered medical practitioners, and the causes of 8,607, or 6·5 per cent., by coroners after inquest; whilst the causes of the remaining 2,254, or 1·7 per cent., were not certified; the average proportion of uncertified deaths in the ten preceding second quarters having been 2·1 per cent. The proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Hertfordshire, Cheshire, and Monmouthshire, but it reached 3·4 in Huntingdonshire and in Bedfordshire, 3·5 in Derbyshire and in Durham, 4·0 in Westmorland, and 4·3 in Herefordshire. In the 76 great towns the mean proportion of uncertified deaths was 1·2 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, Brighton, Southampton, Great Yarmouth, Plymouth, Devonport, Derby, Birkenhead, and Newport (Mon.), the proportion per cent. rose to 3·8 in Gateshead, 3·9 in Liverpool and in Sunderland, 4·0 in South Shields, 4·1 in Blackburn, 4·9 in Warrington, 5·5 in Stockton on Tees, and 6·3 in St. Helens.

Inquests.

Inquests were held in England and Wales concerning 8,607, or 6·5 per cent., of the total deaths, the mean proportion in the ten preceding second

quarters having been 6·3 per cent. In the 76 great towns the proportion of inquest cases was 7·6 per cent., ranging from 1·2 in King's Norton, 1·9 in Hastings and in Handsworth, 2·4 in Rotherham, 2·7 in Bury, and 2·9 in Smethwick, to 9·4 in Derby, 9·6 in Newcastle upon Tyne and in Cardiff, 9·9 in Merthyr Tydfil, 10·0 in London and in Devonport, and 12·6 in Croydon.

Deaths in Public Institutions.

The total deaths registered in England and Wales included 22,325, or 16·9 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding second quarters having been 14·0 per cent. In the 76 great towns the deaths in public institutions averaged 23·3 per cent. of the total deaths, the lowest percentages in the several towns being 2·3 in Rhondda, 5·1 in Hornsey, 5·2 in Handsworth, and 6·9 in Smethwick; and the highest 24·2 in Brighton, 25·1 in Bootle, 27·2 in Liverpool, 29·8 in West Ham, and 35·9 in London.

LONDON.

The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London which occurred in the Willesden Workhouse at Hackney, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth and Streatham, and in the Metropolitan Asylums Board Hospitals within registration London. The death-rate thus computed was equal to 16·1 annually per 1000 from all causes, and to 2·09 per 1000 from the principal epidemic diseases (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London be excluded, the rates will not exceed 15·7 and 2·08 per 1000 respectively. Table X. shows the death-rate in London after this correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the twenty-nine Metropolitan Boroughs, corrected by the distribution of all deaths in public institutions to the Boroughs to which the deceased persons had belonged, are also shown.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual death-rate per 1000 living last quarter was 18·3 in Edinburgh, 21·2 in Glasgow, 22·7 in Dublin, and 20·5 in Belfast, against 16·1 in London.

COLONIAL AND FOREIGN CITIES.

From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-four of the Colonial and Foreign cities, with an aggregate population estimated at nearly nineteen and a half millions, corresponded to an annual rate of 24·2 per 1000 persons living, against a rate of 16·6 in seventy-six great English towns.

In nineteen European and American cities the mean rate was 20·5 per 1000, against 16·6 in seventy-six great English towns. In Paris the rate was 19·4, in Vienna 22·1, and in New York 18·9, against 16·1 in London. The rate for Berlin cannot be stated, as no copies of statistical returns have been received from that city during the current year. Among the other cities the death-rates ranged from 14·7 in Antwerp, and 14·8 in Christiania, to 25·1 in St. Petersburg and in Trieste, 26·0 in Prague, and 27·7 in Moscow. Among the Indian and African cities the death-rate rose to 37·4 in Cairo, 37·6 in Madras, 51·3 in Calcutta, and 61·0 in Bombay.

Small-pox caused 146 deaths in New York, 103 in Bombay, 50 in Boston, 49 in Calcutta, 43 in Moscow, 29 in Paris, 25 in Madras, 25 in Antwerp, and 13 in St. Petersburg. In proportion to population, *measles* was most fatal in Amsterdam, Moscow, Vienna, and Trieste; *scarlet fever* in Moscow, Hamburg, Buda-Pesth, and New York; *diphtheria* in Paris, St. Petersburg, Moscow, and New York; *whooping-cough* in Amsterdam, Copenhagen, Christiania, and Hamburg; "*fever*" in the Indian and African cities, and in St. Petersburg, Moscow, and New Orleans; and *diarrhœal diseases* in the Indian and African cities, and in St. Petersburg, Moscow, Munich, Vienna, Prague, and New Orleans.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales during the second quarter of the year 1902 (*see* pages xxiii.-xxvi.).

* This table is supplied by the Medical Officer of Health of the Administrative County of London, and is compiled from returns which the London County Council receives from the Metropolitan Asylums Board under section 55 (4) of the Public Health (London) Act, 1891.

† The notification of chicken-pox was made compulsory over the whole of the County of London on the 7th February, 1902.

TABLE X.—COUNTY OF LONDON.—Births, Deaths, and Death-Rates in London, and in the Metropolitan Boroughs during the THIRTEEN WEEKS ended 28th June, 1902, after Distribution of Deaths in Public Institutions.

In this Table 0.00 indicates that the deaths were too few to give a rate of 0.005; where no death occurred, — is inserted.
Note.—The rates for the County of London do not in all cases agree with those in Table vi, page xvii. For explanation, see page ix.

TABLE XI.—ENGLISH AND WELSH WATERING PLACES.—**Population; Births and Deaths**

* The Registration or Union Counties consist of groups of Registration Districts, which are generally co-extensive in that Registration County in which the principal town of the district, or the greater part of the population, is Geographical Counties.

^b These areas have been revised by the Ordnance Survey Department for the Report on the Census of 1901.

^c For London, Staffordshire, Lancashire, Yorkshire and Durham and their constituent districts and sub-

^d The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^e See page 6, note ^b.

* On 1st April, 1901, part of Hornsey sub-district (129-1) was transferred from Middlesex to London. The averages for this part cannot be ascertained and are included in the figures given for Middlesex and for the South Midland Division.

REGISTRATION COUNTIES, and REGISTRATION DISTRICTS of ENGLAND; Births and INFANTS under one year of Age, and of PERSONS aged 60 years and upwards from THERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE, also of DEATH, registered in the Quarter ended 30th June 1902, in the DIVISIONS and REGISTRATION SUB-DISTRICTS of ENGLAND AND WALES.

Divisions and Registration Counties.*	The DEATHS in the Quarter are stated by the Registrars to include													
	Deaths of		Deaths from									Inquest Cases.	Deaths in Public Institutions.	Uncertified Causes of Death.
	Infants under 1 Year of Age.	Persons, aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Cholera.	Violence.

The Registration Districts, 835 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note ^b.

^b For London, the figures given for the quarter are derived from the Weekly Returns made by the Registrars.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

Owing to numerous changes of boundary on 1st April, 1901, the averages of the deaths for the three preceding years would be misleading; they are, therefore, omitted from this table.

The Registration Sub-districts (2063 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district is within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; H indicates a Hospital or Infirmary; and L a Lunatic Asylum.

See page 2, note b.

* See page 6, note b.

* 126 : 3, 5.—On 1st December, 1901, the boundary between these sub-districts was altered. Revised areas of the sub-districts have not yet been ascertained.

† 129 : 1.—In consequence of changes of boundary on 1st April, 1901, the average number of deaths for the three preceding years would be misleading, and is therefore omitted.

‡ 129 : 2, 3, 4. On 1st April, 1902, the sub-district of Tottenham was re-arranged into three sub-districts—viz., West Green (2), West Tottenham (3), and East Tottenham (4). See page 70.

§ 127 : 2.—The 5 deaths from small-pox occurred in the Willesden Small-pox Hospital.

|| 128 : 1.—The 18 deaths from small-pox occurred in the Small-pox and Vaccination Hospital, South Mimms.

¶ 134 : 2.—The 6 deaths from measles occurred in the Borough of Hertford.

III.—SOUTH MIDLAND COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

140 : 3. On 1st June, 1902, the sub-districts of Amersham and Beaconsfield were united and called Amersham. See 10. The births and deaths are shown as if the change had taken place at the beginning of the quarter.
 141 : 1.—Of the 8 deaths from measles, of which 6 were registered in June, 5 occurred in the parish of Iver and 3 in parish of Langley.
 141 : 2.—Of the 10 deaths from measles, 9 occurred in Slough Urban District.
 141 : 3.—Of the 4 deaths from measles, 3 occurred in the Parish of Stoke Poges.
 151 : 1.—The 3 deaths from small-pox were of patients taken from the Bicester Workhouse.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE
QUARTER ENDING JUNE 30TH, 1902.

EXTRACTED FROM THE
MONTHLY WEATHER REPORTS
OF THE
METEOROLOGICAL OFFICE
BASED ON OBSERVATIONS AT 114 STATIONS.*

APRIL, 1902.

General Summary.—Over England the weather of April, though of a somewhat changeable character, was mainly fair and dry. In Ireland and Scotland the conditions were less settled, rain being of rather frequent occurrence, especially in the former country. Thunderstorms were experienced at some of our north-western stations on the 3rd, and similar phenomena, or thunder only, occurred in many isolated parts of the kingdom between the 19th and 24th. Pressure was a little above the average; temperature was below the normal in most places; the winds were rather variable over England, but were Easterly on our south west coasts, and Southerly to Westerly over the northern parts of the kingdom; rainfall varied greatly in amount in different districts; bright sunshine was, as a rule, in excess of the average.

Pressure.—*Mean at 8 a.m.* ranged from 29·95 ins. and upwards over the central and south-eastern parts of England to between 29·85 ins. and 29·87 ins. on our extreme western and northern coasts. The general distribution and the mean gradient agreed very closely with the normal, but the actual values were slightly above the average on all but our south-west coasts. *Highest* readings were recorded either on the 7th or on the 28th or 29th; on the first of these dates the barometer rose to 30·3 ins. and upwards over nearly the whole of Great Britain, similarly high values being recorded on the later occasions over Ireland, Scotland, and the north of England. *Lowest* readings were observed in most places on the 22nd, when the barometer fell a little below 29·0 ins. in the west of Ireland, below 29·3 ins. in the western and northern parts of the United Kingdom generally, and below 29·6 ins. in most of the eastern and southern districts. In the extreme north of Scotland the lowest readings were recorded on the 1st, the barometer at Sumburgh Head falling to a minimum of 28·90 ins. *Range* was moderate.

Depressions were rather numerous and moved in various directions. The only disturbances of noteworthy intensity were (1) a system which skirted the north of Scotland on the 1st and which occasioned a whole gale from the north-westward in Caithness; and (2) a depression which moved northwards outside our extreme western coasts on the 19th, a considerable increase of wind from the South-eastward and Southward taking place at the time in Ireland and the west of Scotland. The latter disturbance formed one of a series moving in very similar tracks between the 18th and the 23rd.

Anticyclones.—Two such systems were observed. The first spread over our islands from the north-westward on the 6th, and subsequently extended over the greater part of the Continent. After the 9th the southern portion of the system gave way, but for some days afterwards its central area remained almost stationary over Northern Europe. The second extended temporarily south-westwards from Scandinavia on the 24th and 25th, but gradually broke up on the 28th, the portion affecting our islands moving away in a south-westerly direction to the Atlantic.

* Tables of observations from 28 stations specially contributed for the information of the Registrar-General are given on pp. 81-84. Of these stations 22 are not included in the 114 upon the observations at which the General Remarks are based.

Winds blew in conformity with the distribution of mean pressure, being mainly Easterly on our south-west coasts, but Southerly to Westerly over the northern parts of the United Kingdom; over England they varied greatly in direction. Gales were rare, excepting on our extreme north-west coasts, and were, as a rule, of little severity.

Temperature.—*Mean at sea level* ranged from 49° and upwards in the Scilly and Channel Islands, and from 47° and upwards over the south-western and extreme western parts of the United Kingdom generally, as well as in some parts of the English midland and south-eastern counties, to 44° or less in the north and east of Scotland and to about 42° in the Shetlands. Over the country generally the mean values were below the average, but at several stations in the north and east of Great Britain they were above it. In each case the departure from the normal varied considerably in extent in different places, but in no instance was it very large. *Highest* readings occurred, as a rule, either between the 16th and 19th, or on the 24th or 25th, the thermometer on one or other of those occasions rising a little above 60° in most parts of Ireland, and above 65° at many of the English stations; in London and at Cambridge the maximum reading on the 19th was as high as 70° . *Lowest* readings were registered mostly between the 7th and 10th, when frost occurred in nearly all districts; at several places in the northern and central parts of the United Kingdom the sheltered thermometer fell to 25° or less, the lowest reading reported being 21° at Braemar and at Cally (Gatehouse). *Range* was generally moderate for the time of year, but amounted to as many as 43° at Cambridge and 44° at Cally. *Vapour Pressure* ranged from 0.29 in. at Scilly, and 0.27 in. or more on most parts of our south and south-west coasts, to between 0.22 in. and 0.24 in. over central Ireland and the northern and central parts of Great Britain. *Relative Humidity* varied from 90 per cent. at Portland Bill, 89 per cent. at Dungeness, and 87 per cent. at Donaghadee to only 76 per cent. in London and at Nairn and Aberdeen.

Rainfall varied considerably in amount in different parts of the kingdom. Over Ireland and at some stations in central England, North Wales, and the north and east of Scotland it was in excess of the average. In most other localities there was a deficit, the total amount in the south-east of England and at Glasgow and Killarney being less than half the normal. The largest aggregates for the month were 5.7 ins. at Laudale, 3.8 ins. at Valencia, and 3.5 ins. at Edenfel; the smallest being 0.4 in. at Dungeness, and 0.5 in London and at Clacton-on-Sea and Littlestone-on-Sea. Over England the number of days with rain was small, less than 10 being reported in several places and only 6 at Littlestone. The heaviest individual fall of anything like a general character occurred on the night of the 21st or early on the 22nd, when more than an inch was measured at several stations in the south of Ireland, and also at Falmouth. Snow fell in many parts of the northern and central districts between the 1st and 5th, and again in the west and north of Scotland on the 11th.

Bright Sunshine was in excess of the average over the country generally, but amounted to less than the normal in the south-west of England. The percentage of the possible duration ranged from 63 at Aberdovey and 50 or more on several other parts of our western coasts, to 40 or less at many of our northern and south-western stations, and to only 30 in London and at Glasgow.

MAY, 1902.

General Summary.—The weather of May was for the most part cold and changeable, with frequent showers in all districts, and with occasional falls of hail, sleet, or snow in several parts of Great Britain. At the close of the third week the conditions became for a time much finer and warmer, but at the end of the month unsettled rainy weather set in very generally. Thunderstorms, or thunder only, occurred at various times—mostly over England, and in the earlier half of the month. Pressure was high in the west and south, but low in the north and east; temperature was considerably below the average; the winds were mainly from between North and West; rainfall was in excess of the average in most places; bright sunshine was deficient, excepting at a few isolated places in the west and north.

Pressure.—*Mean at 8 a.m.* ranged from 30.10 ins. and upwards over the south-west of Ireland and the adjacent parts of the Atlantic to between 29.90 ins. and 29.92 ins. on the east coasts of Great Britain, and to a little below 29.85 ins. in the Shetlands. The marked uniformity in pressure usually existing in May was therefore replaced by a decided north-westerly gradient, the mean values being a little above the average in the western and

southern districts, but a little below it in the north and east. *Highest* readings occurred on the 7th or 8th, or on the 22nd or 23rd; on the earlier dates the barometer rose to 30·5 ins. and upwards in the west of Ireland and to 30·3 ins. and upwards in the western and northern parts of the kingdom generally, while on the latter dates it rose to 30·5 ins. and upwards in the south of Ireland and the south-west of England, and to 30·3 ins. and upwards in all our more western and southern districts. *Lowest* readings occurred in most places on the 17th, when the barometer fell to 29·2 ins. and less over the greater part of Scotland and the north of England, and to 29·4 ins. and less in nearly all other parts of the United Kingdom. In the extreme north of Scotland the lowest readings were observed on the 28th, when the barometer fell below 29·0 ins. in the Hebrides, and below 28·9 in the Shetlands. *Range* was moderate.

Depressions were rather numerous for the time of year, but were, as a rule, of little intensity. In some few cases the centres moved in an easterly direction across our more northern districts, but in many instances the disturbances were developed over Scandinavia or Denmark.

Anticyclones.—Three such systems were observed. The first spread in from the Atlantic on the 5th, and covered the major part of Western and Northern Europe until the 10th, the central portion of the system being situated almost constantly off our own western coasts. The second spread over from the Atlantic on the 20th and remained with us until the 26th, when it moved away to the southward, the central area being found usually over the Bay of Biscay. The third was formed over Scandinavia on the 30th and extended over the extreme northern parts of our islands at the close of the month.

Winds were mostly from some point between North and West, the prevalence of Southerly and Easterly winds being unusually small for the time of year. Scarcely any gales were experienced in the south and east, but in other districts they were more numerous, the number of days affected being as large as 11 at Malin Head, 9 at Stornoway, and 8 at Morpeth (Cockle Park).

Temperature.—*Mean at sea level* ranged from 51° at Scilly and 50° and upwards at Jersey and at several stations in the southern parts both of England and Ireland (an area of relative warmth being found also over the south-east of Scotland) to 45° and less in the north of Scotland, and to 43° and less in the Shetlands. The general distribution over our islands showed a fair agreement with the average, but the mean values were everywhere low, the departure from the normal exceeding three-and-a-half degrees in many places, and amounting to between four-and-a-half and five-and-a-half degrees in some parts of Central Scotland. *Highest* readings were recorded as a rule on the 23rd or 24th, when the thermometer exceeded 70° in many parts of Great Britain, the highest readings recorded being 76° at Alnwick Castle and 75° at York. *Lowest* readings were registered at various times in the different districts, but mostly about the 6th, the 10th, or the 14th, on each of which occasions frost occurred in several parts of the kingdom: at Cirencester and Littlestone-on-Sea the thermometer on the 14th fell to 25°, while at Braemar on the 10th it went as low as 23°. *Range* was moderate for the time of year. *Vapour Pressure* ranged from 0·30 in. and upwards over the western parts of the English Channel and 0·28 in. and upwards on most parts of our western and southern coasts to between 0·22 in. and 0·24 in. on the north and east coasts of Scotland. *Relative Humidity* ranged from 90 per cent. at Malin Head and Portland Bill to 75 per cent. and less over Central Scotland, and to 72 per cent. at Leith and also in London.

Rainfall was in excess of the average over the United Kingdom generally, but showed a deficit at most of the south-western stations, and also in the south midland counties and in isolated parts of Scotland. The largest aggregates reported were 6·1 ins. at Glencarron, 5·7 ins. at Laudale, and 4·5 ins. at Fort William; the smallest being 1·3 ins. at Pembroke, Scilly, and Dungeness, 1·4 ins. at Roches Point, and 1·5 ins. at Kilkenny and Littlestone-on-Sea. The number of days with rain was very large, more than 20 being reported in nearly all districts, and more than 25 at several places in the extreme northern and north-western parts of the kingdom. Snow or sleet showers occurred in many parts of Great Britain between the 4th and 6th, and again at several of our northern and eastern stations between the 12th and 14th.

Bright Sunshine was deficient over the United Kingdom as a whole, a slight excess being however reported at a few isolated places in the western and northern parts of Great Britain. The percentage of the possible duration ranged from 53 at Guernsey, and 50 or slightly above it on some parts of the Cornish coasts, to 30 or less at several of the Scotch stations and at Birmingham, and to only 20 at Fort Augustus.

JUNE, 1902.

General Summary.—Until the closing week, when a very decided improvement occurred, the weather of June was extremely cool and unseasonable, with frequent rains, and occasional thunderstorms in most districts. During the second and third weeks slight ground frosts occurred at several of our northern and eastern stations. Pressure was below the average, excepting in the north of Scotland; temperature was low, but owing to the warm spell which occurred towards the end of the month the deficiency shown by the mean values was small excepting on our north-east coasts; the winds were rather variable, but most commonly from some easterly point; rainfall was very irregularly distributed, but was mainly in excess of the average in the eastern and southern, and in defect in the western and northern districts; bright sunshine was deficient, especially in the north-eastern and south-western parts of the kingdom.

Pressure.—*Mean at 8 a.m.* ranged from 29·95 ins. and upwards over the Shetlands, the Orkneys and the north-east coasts of Scotland, to a little below 29·85 ins. in the south-west of Ireland, and to very little above that point in the Scilly Islands. The general distribution over our islands was therefore quite abnormal, the slight south-westerly gradient usually prevalent in June being replaced by one for easterly and south-easterly winds. In the north of Scotland the mean values were a trifle above the average, but in all other districts they were below it, the deficit being greatest (0·10 in. to 0·15 in.) in the south-western portions of the kingdom. *Highest* readings were recorded, mostly on the 24th, when the barometer rose to 30·2 ins. and upwards in nearly all parts of Great Britain and to 30·1 ins. and upwards in Ireland; on our north-east coasts, however, the highest readings were observed on the 26th or 27th, the mercury rising in some places to 30·3 ins., or even a trifle above it. *Lowest* readings were recorded as a rule between the 11th and the 13th, when the barometer fell below 29·4 ins. in the south and east of England, and below 29·6 ins. in all other parts of the United Kingdom. *Range* was moderate in the south, but slight elsewhere.

Depressions.—These were rather numerous for the time of year, but were as a rule of little importance, the most interesting case being that of a well marked system which moved slowly and in a very erratic course between the 11th and the 15th. Appearing originally over the extreme south of Ireland, the disturbance travelled in the first place south-eastwards to the western part of the English Channel, and afterwards north-eastwards across the south-east of England. On reaching the North Sea it pursued a more northerly track until it reached the north-east of Scotland, when the system entirely changed its course, the centre moving southwards on the 14th and 15th to the south-east of England, where the depression gradually dispersed. At the beginning and in the latter half of the month the centres of low-pressure systems occasionally appeared off our south west coasts, and threatened to advance eastwards, but ultimately passed away again over the Atlantic, mostly in a north-westerly direction.

Anticyclones.—Three such systems were observed. The first extended from Northern Europe over the northern and eastern parts of Great Britain on the 1st and 2nd, but receded north-eastwards on the 3rd. The second advanced from the northward on the 17th and spread temporarily over the greater part of Western Europe, but moved away to the north-eastward on the 18th, and dispersed. The third advanced north-eastwards from Spain and the adjacent parts of the Atlantic on the 22nd, and during the next two or three days extended over nearly the entire Continent, its central area being situated as a rule over Norway, Denmark, and the eastern portions of the North Sea. On the 25th and 26th its borders were temporarily broken into by a cyclonic disturbance which appeared off our south-west coasts, while on the 29th the entire system drifted northwards and apparently dispersed.

Winds showed considerable variability, but in nearly all places there was an undue proportion of breezes from some Easterly quarter (North-east to South-east). Gales were rare and of little importance, an entire absence being reported on all the more northern coasts of Great Britain.

Temperature.—*Mean at sea level* ranged from a little below 60° in London, and from 58° and upwards at most inland stations in the southern parts of England and Wales to 54° or less on the north coasts of England and Ireland, to 51° or less on the north and north-east coasts of Scotland, and to 49° or less in the Shetlands. The general distribution over our islands agreed very fairly with the normal, but the mean values were in nearly all cases below the average. The deficit varied greatly in extent in different places (at a few isolated stations there was even a slight excess), but was upon the whole greatest on our north-east coasts, where it amounted to between three and three-and-a-half degrees. *Highest* readings were recorded mostly between the 28th and 30th, excepting in the extreme northern and north-western parts of the kingdom, where they occurred a day or two earlier; at most of the inland stations the thermometer about this time rose to 80° or more, the highest readings reported being 89°·5 at Hereford, 87° at Cambridge, and 86° at Bawtry. *Lowest* readings occurred as a rule between the 9th and the 11th, when the sheltered thermometer fell to 35° or less at many inland stations in the northern parts of Great Britain, to 33° at Newton Reigny,

and to 32° at Braemar. On the night of the 9th the thermometer on the surface of the grass fell to 28° at Harrogate and to 29° at Fulbeck. *Range* was large, especially in the inland districts, where it amounted in many places to more than 40°; at Loughborough and Colly Weston it was as much as 50°, and at Cambridge 52°. *Vapour Pressure* ranged from between 0·38 in. and 0·41 in. on our southern coasts to 0·32 in. or less on the north and north-east coasts of Scotland, and to 0·29 in. at Sumburgh Head. *Relative Humidity* varied from 95 per cent. at Portland Bill and 85 per cent. or more at the coast stations generally to a little below 80 per cent. in the south-west of Ireland and in inland parts of the south of England.

Rainfall varied greatly in amount in different places. At many of our western and northern stations there was a deficiency—slight as a rule, but large in the west of Scotland. In most other parts of the kingdom the amount was in excess of the average, the excess being large in inland portions of the south of England. The largest aggregates reported were 5·4 ins. at Arlington, 4·4 ins. at Swarraton, and 4·2 ins. at Valencia; the smallest being 1·1 ins. at Malin Head and Chester, 1·2 ins. at Bawtry and Prestwich, and 1·3 ins. at Fort Augustus, Aspatia, Blackpool and Stonyhurst. A heavy fall occurred over the south and south-east of England on the 13th, more than an inch being registered in many places (including London), and as much as 1·4 ins. at Swarraton and Felixstowe.

Bright Sunshine amounted to less than the average in most places, the deficiency being large at many of our north-eastern and south-western stations, and especially in Edinburgh, where the total duration was little more than half the average. The per-centage of the possible duration ranged from 48 at Westbourne and Felixstowe and 40 or more on several other scattered parts of our south and east coasts to 25 at Fort Augustus and 24 at Aberdeen and Armagh, and to only 16 in Edinburgh.

NOTES ON THE SPECIAL TABLES ON pp. 81-84.

Temperature.—In April at Cambridge (Trinity College) a maximum of 71°·0 was observed on the 25th, while at Llangammarch Wells a minimum of 21°·0 was reported on the 7th.

In May a minimum of 24°·0 was observed on the 2nd at Barnet.

In June a maximum of 89°·5 was reported on the 28th at Hereford, while at Trinity College, Cambridge, the thermometer rose to 88°·5 on the 29th.

At Stonyhurst on the 9th the minimum in the Glaisher screen was as low as 32°·0.

Thunderstorms occurred in April on the 3rd at Halifax, Hull, Llandudno, and Stonyhurst; on the 20th at Halifax, Leeds and Wolverhampton; and on the 23rd at Halifax.

In May on the 3rd at Halifax, Hull, Oxford, and Salisbury; on the 4th at Eastbourne; on the 6th at Stonyhurst; on the 7th at Portsmouth; on the 9th at Guernsey; on the 17th at Coventry, Salisbury, and Wolverhampton; on the 29th at Hull, and on the 30th at Cambridge.

In June on the 1st at Hull, Llandudno, and Wolverhampton; on the 2nd and 3rd at Eastbourne; on the 4th at Barnet, Cambridge, and Hull; on the 7th at Barnet, Coventry, and Oxford; on the 16th at Hereford and Wolverhampton; on the 17th and 20th at Liverpool; on the 29th at Coventry, Llandudno, and Wolverhampton; and on the 30th at Eastbourne.

Thunder was heard but lightning was not seen in April on the 20th at Hereford; and on the 23rd at Hull, Liverpool, and Stonyhurst.

In May on the 2nd and 3rd at Salisbury; on the 4th and 7th at Osborne; on the 9th at Stonyhurst; on the 17th at Hull; on the 18th at Cambridge, Eastbourne and Llandudno; on the 19th at Cambridge; and on the 29th at Halifax.

In June on the 7th at Cambridge; on the 14th at Hereford, Osborne, and Oxford; on the 15th at Halifax; on the 16th at Cambridge; on the 17th at Eastbourne; on the 20th at Bath; on the 26th at Halifax; and the 29th at Liverpool.

Lightning was seen but thunder was not heard in April on the 4th at Liverpool.

In May on the 2nd at Halifax; on the 4th at Eastbourne and Osborne; on the 6th at Eastbourne; on the 18th at Leeds; and on the 28th at Liverpool.

In June on the 1st at Osborne; on the 4th at Ventnor; on the 16th at Cambridge; and on the 29th at Halifax and Hull.

Solar Halos were seen in April on the 1st and 2nd at Oxford; on the 3rd and 4th at Halifax and Oxford; on the 7th at Hereford and Oxford; on the 8th at Osborne and Oxford; on the 14th, 16th, 17th, and 19th at Oxford; on the 21st at Osborne; on the 22nd at Halifax and Osborne; on the 24th at Oxford; on the 25th at Halifax, Llandudno, Osborne, and Ventnor; and on the 29th at Halifax.

In May on the 2nd at Osborne; on the 11th at Osborne and Oxford; on the 13th at Osborne; on the 17th at Oxford; on the 21st at Halifax; on the 22nd at Oxford; on the 28th at Halifax and Oxford; on the 29th at Oxford and Ventnor; and on the 30th at Liverpool.

In June on the 1st at Oxford; on the 10th at Halifax, Llandudno, and Stonyhurst; on the 14th at Halifax; on the 18th at Oxford; on the 19th at Halifax and Oxford; on the 20th at Oxford; on the 22nd at Halifax; and on the 23rd at Oxford.

Lunar Halos were seen in April on the 11th and 13th at Llandudno; on the 14th at Llandudno and Oxford; on the 15th and 16th at Llandudno; on the 17th, 18th and 19th at Llandudno and Oxford; on the 20th at Llandudno; on the 21st at Oxford; and on the 22nd and 23rd at Llandudno.

In May on the 10th and 13th at Llandudno; on the 14th at Halifax and Llandudno; on the 16th at Llandudno and Oxford; on the 18th and 21st at Llandudno.

In June on the 10th, 17th, 21st, 22nd and 23rd at Llandudno.

Snow fell in April on the 3rd at Stonyhurst; on the 4th at Halifax; on the 5th at Halifax, Liverpool and Wolverhampton; on the 6th at Nottingham; on the 7th and 10th at Halifax; and on the 13th at Stonyhurst.

In May on the 6th at Cambridge, Carlisle, Halifax, Hull, Leeds, Llandudno, Oxford, Portsmouth and Stonyhurst; on the 7th at Halifax, Hull and Nottingham; on the 8th at Halifax; on the 12th at Leeds; on the 13th at Coventry, Halifax, Hull, Leeds and Stonyhurst; and on the 14th at Cambridge, Halifax, Salisbury and Wolverhampton.

Hail fell in April on the 3rd at Halifax, Hull, Llandudno and Stonyhurst; on the 4th at Halifax and Stonyhurst; on the 5th and 6th at Cambridge; on the 22nd at Stonyhurst; and on the 23rd at Guernsey and Halifax.

In May on the 3rd at Cambridge, Halifax, Hull, Oxford, Salisbury and Stonyhurst; on the 4th at Cambridge, Coventry, Eastbourne, Hull, Leeds and Ventnor; on the 5th at Halifax, Hull, Osborne, Oxford and Stonyhurst; on the 6th at Cambridge, Carlisle, Halifax, Hull, Leeds, Nottingham, Osborne, Oxford, Portsmouth and Stonyhurst; on the 7th at Hull, Nottingham, Oxford and Stonyhurst; on the 8th at Eastbourne; on the 9th at Eastbourne, Hull and Stonyhurst; on the 11th at Eastbourne and Leeds; on the 12th at Eastbourne and Halifax; on the 13th at Carlisle, Hereford, Nottingham and Salisbury; on the 14th at Halifax; on the 17th at Coventry, Llandudno and Wolverhampton; on the 18th at Coventry, Eastbourne, Hull, Leeds, Osborne, Ventnor and Wolverhampton; and on the 19th at Halifax, Leeds, Nottingham and Wolverhampton.

In June on the 7th at Coventry, Hereford, Osborne and Oxford; on the 11th at Hereford; on the 16th at Bath and Hereford; and on the 17th at Eastbourne.

Fog prevailed in April on the 1st at Guernsey; on the 7th at Hull; on the 8th at Hull, Leeds and Wolverhampton; on the 9th at Wolverhampton; on the 12th at Hull; on the 13th at Hull and Oxford; on the 14th at Hull; on the 15th at Hull and Oxford; on the 16th at Hull; on the 17th at Cambridge and Hull; on the 18th at Cambridge, Osborne and Salisbury; on the 19th and 24th at Hull; and on the 25th at Hull and Osborne.

In May on the 11th at Hull; on the 12th at Eastbourne; on the 22nd at Hull; on the 23rd at Eastbourne; on the 25th at Guernsey and Osborne; and on the 30th at Eastbourne and Hull.

In June on the 4th at Hull; on the 5th at Guernsey; on the 18th at Hereford and Wolverhampton; on the 21st at Hull and Ventnor; on the 23rd at Osborne; on the 24th at Osborne and Ventnor; and on the 29th at Guernsey.

MONTHLY METEOROLOGICAL TABLES FOR THE QUARTER ENDING JUNE 30TH, 1902.

NOTE.—The values in the following Tables are the results of observations taken each day at 9 a.m. at all the stations, except Guernsey and Oxford where the hour was 8 a.m., at Eastbourne where the hour was 9.30 a.m., and at Halifax (Public Library) and Leeds where the hour was 10 a.m.

The mean values given in the Tables are the averages of the readings taken at the hour of observation. For the Tables up to and including those for the first quarter of 1902 Mr. Glaisher obtained values for the means for the month from observations at fixed hours by the introduction of corrections for the diurnal variation of the several elements. These corrections are given in Glaisher's Diurnal Range Tables, from which the following appropriate to the months of the current quarter, are extracted:—

Month.	8 a.m.					9 a.m.					10 a.m.				
	Barometer.	Dry-bulb.	Wet-bulb.	Mean of Max. and Min.	Cloud Amount.	Barometer.	Dry-bulb.	Wet-bulb.	Mean of Max. and Min.	Cloud Amount.	Barometer.	Dry-bulb.	Wet-bulb.	Mean of Max. and Min.	Cloud Amount.

No. 215.] **Marriages**—*April, May, June, 1902.* [Price 9d.
Births and Deaths—*July, August, September, 1902.*

*General Register Office, Somerset House,
28th October, 1902.*

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1902 is estimated at 41,952,510 persons; that of England and Wales at 32,995,614, that of Scotland at 4,531,299, and that of Ireland at 4,425,597.

In the United Kingdom 299,451 *births* and 147,397 *deaths* were registered in the three months ended 30th September 1902. The natural increase of population was, therefore, 152,054. The number of *persons married* in the quarter ended 30th June 1902 was 152,472.

The birth-rate in the United Kingdom in the *third* quarter of 1902 was 28·3, and the death-rate 13·9, per 1000. The marriage-rate in the *second* quarter of 1902 was 14·6 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Emigration.

According to the returns issued by the Board of Trade, it appears that 128,699 emigrants embarked, during last quarter, from the several ports of the United Kingdom at which emigration officers are stationed, for places outside Europe.

Distributing proportionally 2347 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom numbered 73,987, of whom 50,501 were English, 9,674 Scottish, and 13,812 Irish, whilst 54,712 others were of foreign nationality. The proportions of emigrants accredited to the several parts of the United Kingdom, per million of the respective estimated populations, were as follows:—England, 1,531; Scotland, 2,135; and Ireland, 3,121. Compared with the averages in the three preceding third quarters, the proportion of English emigrants showed an increase of 33·6 per cent., that of Scottish emigrants an increase of 12·7 per cent., and that of Irish emigrants an increase of 10·1 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,056 registration sub-districts of England and Wales during the three months ended 30th September 1902; and the MARRIAGES in 15,421 churches or chapels, in 13,308 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, during the three months ended 30th June 1902.

Marriages.

During the *second* quarter of 1902 the marriages of 124,740 persons were registered, being equal to an annual rate of 15·2 persons married per 1000 of the estimated population, against an average rate of 16·9 per 1000 in the second quarters of the ten years 1892–1901.

Among registration counties the lowest marriage-rates were 10·7 in Cambridgeshire, 11·9 in Essex, 12·1 in Huntingdonshire, and 12·4 in Suffolk and in Cornwall; the highest rates were 16·4 in Shropshire and in Lancashire, 16·7 in Nottinghamshire, 16·9 in the North Riding of Yorkshire, 18·0 in Northumberland, and 18·5 in Lincolnshire. In London the rate was 15·8.

Births.

The births registered in the *third* quarter of 1902 numbered 241,054, and were in the proportion of 29·0 annually per 1000 of the population, the mean rate in the ten preceding third quarters having been 29·5. In registration counties the lowest birth-rates during the quarter were 22·4 in Westmorland, 22·8 in Sussex, 23·1 in Dorsetshire, and 23·4 in Cornwall and in Somersetshire; the highest rates were 33·1 in Northumberland, 33·9 in Staffordshire, 34·6 in South Wales, 35·5 in Monmouthshire, and 35·7 in Durham.

In 76 great towns the birth-rate averaged 30·5 per 1000, ranging from 18·5 in Bournemouth, 19·7 in Hastings, 21·4 in Halifax, 21·9 in Bury, and 22·5 in Hornsey, to 37·4 in St. Helens, 37·6 in Gateshead, 37·7 in Wigan, 39·9 in Merthyr Tydfil, and 42·8 in Rhondda. In 103 smaller towns the mean birth-rate was 28·1 per 1000, whilst in the remainder of England and Wales, excluding these 179 towns, it was 27·7.

Natural Increase of Population

The natural increase of population in England and Wales during the quarter, by excess of births over deaths, was 125,810, against 78,110, 99,505, and 95,649, in the third quarters of 1899, 1900, and 1901 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 26s. 7d., 27s. 3d., and 29s. 10d. respectively in the preceding three quarters, was 30s. 2d. last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4½d.; of prime beef, 7½d.; of inferior mutton, 5¼d.; of prime mutton, 8½d. Compared with the average prices in the preceding three months, the mean price both of inferior beef and of inferior mutton decreased by ¾d.; the mean price of prime beef remained unchanged, while that of prime mutton decreased by ¾d. The average price in the London Market of sea-borne coal, put in barge from the collier in the Thames, was 17s. 4d. per ton, against 23s. 0d. and 17s. 5d. per ton in the third quarters of 1900 and 1901 respectively. The mean price of 2¾% per cent. Consols was 94l. 17s. 4d., having been 95l. 9s. 2d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been reduced on 6th February from 3½% to 3%, remained unchanged throughout last quarter.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 686,986, of whom 202,865 received in-door, and 484,121 out-door, relief. The proportion of the population in receipt of poor-law relief was 20·8 per 1000, against 20·4 and 20·7 per 1000, respectively, in the third quarters of 1900 and 1901.

Meteorology.

Remarks by W. N. Shaw, Esq., M.A., F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 72–81.

The weather in the early part of July was generally fair; the conditions afterwards became very unsettled, and much rain fell in the closing week. August was for the most part cool and changeable, with occasional thunderstorms, and with excessive rainfall over the greater part of England. Changeable weather continued throughout the earlier half of September, with strong gales and heavy rain. After the middle of the month there was a decided improvement in all but the western districts, accompanied by occasional night fogs and frosts at many of the inland stations.

At Greenwich the mean reading of the barometer during the quarter was 29·631 inches, the highest reading of the thermometer was 86°·1, the lowest was 36°·8, and the mean temperature of the air was 59°·6. At 25 other stations of observation the mean temperature of the air during the quarter ranged from 54°·8 at Halifax, 55°·2 at Stonyhurst, 55°·9 at Llangammarch Wells, and 56°·1 at Hull, to 60°·2 at Portsmouth, 60°·3 at Ventnor, 60°·7 at Osborne, 60°·8 in Guernsey, and 61°·1 at Camden Square.

The amount of rain measured during the quarter at the Royal Observatory was 5·67 inches, of which 1·09 inches fell in July, 2·93 inches in August, and 1·65 inches in September. At 25 other stations of observation the rainfall during the quarter ranged from 3·78 inches at Cambridge, and 3·93 inches at Oxford, to 8·28 inches at Llangammarch Wells, 8·33 inches in Guernsey, 8·69 inches at Stonyhurst, and 8·79 inches at Truro.

The duration of bright sunshine recorded at the Royal Observatory was 475·3 hours, being 35·8 per cent. of the time during which the sun was above the horizon; the mean proportion in the ten preceding third quarters having been 38·9 per cent. The duration of bright sunshine exceeded the average by 3·2 hours in July and 13·5 hours in September, but showed a deficiency of 58·1 hours in August.

Deaths.

The deaths registered in England and Wales last quarter numbered 115,244, and were in the proportion of 13·9 annually per 1000 persons living, the average rate in the ten preceding third quarters having been 17·0. In registration counties the death-rates ranged from 9·9 in Westmorland, 10·5 in Buckinghamshire, and 10·6 in Hertfordshire, in Bedfordshire, and in Rutlandshire, to 14·7 in South Wales, 14·8 in Warwickshire, 15·2 in Durham, 15·3 in London, 15·8 in Northumberland, and 16·2 in Lancashire.

The 115,244 registered deaths included 60,693 of males and 54,551 of females, the death-rate among males being 15·1, and that among females 12·7, per 1000 of the estimated populations of the respective sexes. Compared with the averages in the ten preceding third quarters the death-rate of males showed a decrease of 3·2, and that of females a decrease of 3·1, per 1000 living of each sex respectively. Out of equal numbers living, the deaths of males were to those of females as 119 is to 100, against a proportion of 116 to 100 in the third quarters of the ten preceding years.

Urban and Rural Mortality.

In 76 great towns, of which the aggregate population in the middle of 1902 is estimated at nearly fifteen millions, the death-rate was 15·3 per 1000 living, or 1·4 in excess of the death-rate in the whole country. The rates in the several towns ranged from 6·6 in Hornsey, 8·3 in Handsworth, 9·2 in King's Norton, 9·3 in Bournemouth, 9·6 in Walthamstow, and 9·9 in Willesden, to 18·1 in Manchester, 18·2 in Hanley, 18·6 in Bootle, 19·3 in Wigan, 19·6 in Middlesbrough, and 21·2 in Liverpool.

In 103 smaller towns, with an aggregate population estimated at more than three and a half millions in the middle of 1902, the death-rate was 13·0 per 1000 living, or 2·3 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with a population of nearly fourteen and a half millions of persons, of whom nearly seven millions live in small towns, and nearly seven and a half millions in rural districts, the death-rate was 12·6.

Mortality at Different Ages.

Of the 115,244 deaths registered last quarter, 30,044 were those of infants under one year of age, 53,586 those of persons aged between one year and sixty years, and 31,614 those of persons aged sixty years and upwards.

The mortality of infants, measured by the proportion of deaths under one year of age to registered births, was 125 per 1000, the average in the ten

preceding third quarters having been 197. In registration counties the lowest proportions per 1000 births were 49 in Rutlandshire, 61 in Westmorland, 66 in Dorsetshire, and 67 in Shropshire; the highest proportions were 131 in Warwickshire, 135 in Nottinghamshire, 139 in the West Riding of Yorkshire, 148 in Lancashire, and 151 in London.

In the 76 great towns infant mortality averaged 146 per 1000 births, being 21 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 56 per 1000 in Handsworth, 66 in Hornsey, 70 in Bournemouth and in King's Norton, 91 in Bury, 95 in Smethwick, and 97 in West Hartlepool; the highest were 184 in Norwich, 186 in Liverpool, 193 in Middlesbrough, 194 in Plymouth, 200 in Preston, 216 in Portsmouth, and 225 in Bootle. Among the 103 smaller towns infant mortality averaged 123 per 1000 births, ranging from 41 in Shipley, 52 in Colchester, 56 in Kettering, 59 in Lincoln, and 65 in Dewsbury and in Darlington, to 206 in Torquay, 208 in Heston & Isleworth and in Chesterfield, 210 in Edmonton, 215 in Farnworth, 233 in Barnsley, and 234 in Hyde. Excluding these 179 towns, infant mortality in the remainder of England and Wales was in the proportion of 101 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 7·2 per 1000 of the estimated population at this group of ages, being 1·0 below the mean rate in the ten preceding third quarters. Among persons aged sixty years and upwards the mortality was at the annual rate of 51·4 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding third quarters having been 53·2.

Compared with the mean rates in the ten preceding third quarters, the mortality of infants under one year of age showed a decrease of 36·5 per cent., that of persons between one year and sixty years of age a decrease of 12·2 per cent., and that of persons aged sixty years and upwards a decrease of 3·4 per cent.

Mortality from certain Epidemic Diseases.

The 115,244 deaths from all causes include—

6,602	that	were	attributed	to	diarrhœa,
2,523	„	„	„	„	measles,
2,312	„	„	„	„	whooping-cough,
1,620	„	„	„	„	diphtheria,
1,154	„	„	„	„	“fever,”
1,135	„	„	„	„	scarlet fever,
and 183	„	„	„	„	small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 15,529 deaths were referred during the recent quarter, being in the proportion of 1·86 annually per 1000 of the population, or 1·61 below the mean proportion in the third quarters of the preceding ten years.

The mortality from small-pox last quarter was again above the corrected average in the third quarters of the previous ten years. The mortality from measles, scarlet fever, and whooping-cough, was equal to that average, whilst the mortality from diphtheria, “fever,” and diarrhœa was below it.

The deaths attributed to *diarrhœa* were 6,602 in number during the quarter, and were equal to a mortality of 0·79 annually per 1000 of the population, which is below the corrected average rate in the corresponding quarters of the previous ten years by not less than 1·52 per 1000. The highest county rates from *diarrhœa* were 1·01 in Nottinghamshire, 1·09 in Essex, 1·13 in Lancashire, 1·31 in Middlesex, and 1·44 in London. The lowest county rates were 0·08 in Shropshire, 0·07 in Cumberland, 0·06 in Westmorland, and 0·04 in Herefordshire. In the 76 great towns *diarrhœa* caused an average mortality of 1·23 per 1000. The mortality did not exceed 0·13 per 1000 in Bournemouth, 0·10 in Rochdale, and 0·07 in Handsworth, whilst in the other great towns it rose to 2·40 in Preston, 2·41 in Plymouth, 2·44 in Portsmouth, 2·46 in Liverpool, and 3·56 in Bootle. In the 103 smaller towns for which quarterly returns are now published *diarrhœa* was fatal, on the average, to 0·74 per 1000. Among these towns it showed exceptional fatality in Folkestone, Acton, Hove, Heston & Isleworth, Chiswick, Luton, Barnsley, and Edmonton. In the remainder of England and Wales the death-rate from *diarrhœa* averaged 0·37 per 1000. Among registration districts and sub-districts outside the 179 chief towns the disease was especially fatal in Luton, Barking Town, Grays, East Stonehouse, Bilston, Pleasley, Litherland, Aspull, and Pemberton. In accordance with precedent, special tables relating to summer mortality from *diarrhœa* have been inserted in the present Return (*see* Tables XI.—XIII.).

Measles was the registered cause of 2,523 deaths in the course of last quarter. The annual mortality to which these deaths gave rise was equal to a rate of 0·30 per 1000 at all ages, which is equal to the corrected decennial average rate for the third quarter of the year. No deaths from measles were recorded last quarter either in Bedfordshire or in Rutlandshire, and the death-rate from this disease did not exceed 0·05 per 1000 in the North Riding of Yorkshire, in Herefordshire, or in Hertfordshire. Measles showed the highest fatality in Monmouthshire (0·58), in South Wales (0·63), and in Gloucestershire (1·39). In the 76 great towns measles caused an average mortality last quarter of 0·37 per 1000. No deaths from this disease were recorded in any of the following great towns:—Croydon, Ipswich, Great Yarmouth, and Coventry. In the other great towns the measles death-rate ranged from 0·02 per 1000 in Nottingham and 0·03 in Willesden, to 1·33 in Cardiff, 1·35 in Gateshead and in Hanley, 1·47 in Stockton on Tees, and 2·62 in Bristol. In the 103 smaller towns measles was fatal in the average proportion of 0·24 per 1000 living, and among these towns the disease was especially prevalent in Jarrow, Chatham, Oxford, Peterborough, Rowley Regis, Mountain Ash, Burslem, and Keighley. In the remainder of England and Wales the average death-rate from measles was 0·25 per 1000. Among registration districts and sub-districts outside the 179 chief towns the mortality from measles was excessive in Bradford on Avon, Canford, Haslingden, Ossett, Sandal, Castleford, Hemsworth, Cawthorne, Blaenavon, Gelligaer, and Maesteg.

Whooping-cough was the registered cause of death in 2,312 instances during the quarter, giving rise to a death-rate of 0·28 annually per 1000 of the population, which is the same as the decennial average rate for the third quarter of the year. Rutlandshire and Westmorland were free from fatal whooping-cough throughout the quarter, and the rate of mortality from this disease did not exceed 0·04 per 1000 in Dorsetshire. The counties in which whooping-cough was most fatal were London 0·41, East Riding of Yorkshire 0·45, and Hampshire 0·50. Among the 76 great towns, whooping-cough caused an average mortality of 0·36 per 1000 living. Reading, Devonport, Handsworth, Bury, and Swansea were free from fatal whooping-cough during the quarter. Among the remaining great towns the death-rate from this

disease rose to 0·91 in Wigan, 0·96 in Hanley, 1·03 in Norwich, 1·15 in Portsmouth, and 1·17 in Barrow in Furness. In the 103 smaller towns the mortality from this disease averaged 0·22 per 1000; it was especially high in Oxford, Edmonton, Eccles, Tipton, and Jarrow. In the remainder of England and Wales whooping-cough accounted for an average death-rate of 0·21 per 1000. Among registration districts and sub-districts outside the 179 chief towns, the mortality from this disease was excessive in Faversham, Harting, Trowbridge, Gainsborough, Runcorn, Ulverston, Howden, Ormesby, Fishguard, and Llanrhaidr (Montgomery).

Diphtheria (exclusive of “*croup*,” unless stated to be *membranous*) was the registered cause of 1620 deaths during the quarter, the deaths so returned being equal to an annual rate of 0·19 per 1000, which is 0·05 per 1000 below the average rate for the third quarter of the year. The death-rate from this disease did not exceed 0·08 per 1000 either in Shropshire, Worcestershire, Devonshire, Cambridgeshire, or Suffolk, whilst it was equal to 0·33 per 1000 in Cumberland, 0·36 in the North Riding of Yorkshire and in Monmouthshire, and 0·37 in South Wales. Among the 76 great towns diphtheria accounted for an average mortality equal to 0·21 per annum. No deaths from this disease were recorded in any of the following ten towns:—Plymouth, Burton on Trent, Smethwick, Stockport, Wallasey, Bootle, Rochdale, Stockton on Tees, Sunderland, and Tynemouth. Diphtheria showed the greatest fatality, 0·60 per 1000 in Middlesbrough, 0·64 in Hanley, and 0·82 in Rhondda. In the 103 smaller English or Welsh towns diphtheria was fatal in the average proportion of 0·23 per 1000, and among them showed exceptional fatality in Gillingham, Barry, Ilkeston, Stalybridge, Carlisle, Heston & Isleworth, Southend on Sea, and Swinton & Pendlebury. In the remainder of England and Wales diphtheria accounted for an average mortality of 0·17 per 1000 per annum. Among registration districts and sub-districts outside the 179 chief towns diphtheria was especially fatal in Chichester, Witney, Southminster, Wiggenhall, Bridgwater, Blockley, Skipton, and Bywell.

“*Fever*” (including the three principal forms—*typhus*, *enteric*, and *simple continued fevers*) was the reported cause of 1154 deaths last quarter, and accounted for a mortality equal to 0·14 per 1000 per annum, as against 0·19, the corrected average rate in the third quarters of the preceding ten years. No deaths from “fever” were recorded in Westmorland, Rutlandshire, Herefordshire, Huntingdonshire, or in Oxfordshire, and the rate did not exceed 0·02 per 1000 in Shropshire. The highest county rates were 0·23 in Hampshire, 0·26 in Suffolk, and 0·28 in Essex. In the 76 great towns “fever” was fatal in the average proportion of 0·18 per 1000 of the population. No deaths from “fever” were returned from Swansea, Tynemouth, Huddersfield, Rochdale, King’s Norton, West Bromwich, Reading, or from Bournemouth. The highest “fever” rates were 0·74 in Merthyr Tydfil, 0·99 in Grimsby, and 1·12 in Ipswich. In the 103 smaller towns “fever” caused an average death-rate of 0·13 per 1000, and among these towns was especially fatal in Pontypridd, Leigh (Lancashire), Southend on Sea, Enfield, Gravesend, and Widnes. In the remainder of England and Wales the mortality due to “fever” averaged 0·10 per 1000. Among registration districts and sub-districts outside the 179 chief towns “fever” was especially fatal in Grays, Winwick, and Denton.

Scarlet fever accounted for 1135 deaths in the course of the quarter, and for an annual mortality equal to 0·14 per 1000 living, which is the same as the decennial average rate for the third quarter of the year. The counties of Hereford, Salop, Bedford, and Dorset, were free from fatal scarlet fever throughout the quarter, and the death-rate did not exceed 0·02 per 1000 either in Cornwall or in Buckinghamshire. The highest scarlet fever rates were 0·25 in

Worcestershire, 0·27 in Lancashire, 0·32 in Staffordshire, and 0·44 in Warwickshire. In the 76 great towns scarlet fever accounted for an average mortality of 0·19 per 1000. The following great towns were free from the disease in a fatal form during the quarter:—Hornsey, Hastings, Bournemouth, Southampton, Northampton, Ipswich, Great Yarmouth, Leicester, Rochdale, and Rotherham. The highest scarlet fever rates were 0·63 in Bolton, 0·68 in Birmingham, 1·02 in Burnley, and 2·07 in West Bromwich. In the 103 smaller towns this disease caused an average mortality of 0·13 per 1000, the fatality being greatest in Pontypridd, Mountain Ash, Nelson, Tipton, Aberdare, Swinton & Pendlebury, and Oldbury. In the remainder of England and Wales it was fatal in the average proportion of 0·08 per 1000. Among registration districts and sub-districts outside the 179 chief towns scarlet fever showed excessive fatality in Bampton (Oxon), Stourbridge, Nuneaton, Ibstock, Rainow, and Egremont.

Small-pox accounted for 183 deaths during last quarter, as compared with 296, 1121, and 1054, respectively, in the three quarters immediately preceding. Of the 183 deaths from small-pox, 151 belonged to one or other of the 179 chief towns; 73 of the deaths belonged to London, 15 to Swansea, 7 to Liverpool, 6 to Chatham, and 4 each to Tottenham, Edmonton, and Walthamstow. Of the deaths occurring outside the 179 chief towns, 4 belonged to the district of Orsett.

Violent Deaths.

The deaths in England and Wales which were referred to different forms of violence, either accidental or otherwise, numbered 4844 last quarter, and corresponded to an annual rate of 0·58 per 1000 of the population, against an average of 0·62 in the ten preceding third quarters. In registration counties, the lowest death-rates from violence were 0·19 in Rutlandshire, 0·31 in Bedfordshire, and 0·32 in Cornwall; the highest were 0·74 in Herefordshire and in Northumberland, 0·76 in London, 0·78 in the East Riding of Yorkshire, and 0·82 in Monmouthshire. In the 76 great towns the mean rate was 0·63 per 1000 living; among the several towns not one death from violence was recorded in Hornsey, and the rate was only 0·07 in Handsworth and 0·10 in Aston Manor, but it rose to 1·01 in Great Yarmouth, 1·03 in Hanley and in Middlesbrough, 1·08 in Merthyr Tydfil, and 1·22 in West Bromwich.

Certification of Causes of Death.

Of the 115,244 deaths registered in England and Wales last quarter, the causes of 105,061, or 91·2 per cent., were certified by registered medical practitioners, and the causes of 8218, or 7·1 per cent., by coroners after inquest; whilst the causes of the remaining 1965, or 1·7 per cent., were not certified; the average proportion of uncertified deaths in the ten preceding third quarters having been 1·9 per cent. The proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Buckinghamshire, Gloucestershire, Cheshire, and Monmouthshire, but it reached 3·2 in Bedfordshire, 3·3 in Derbyshire and in North Wales, 3·6 in Durham, 3·9 in Cumberland, 5·6 in Huntingdonshire, 6·5 in Herefordshire, and 7·5 in Westmorland. In the 76 great towns the mean proportion of uncertified deaths was 1·2 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, East Ham, Brighton, Bournemouth, Southampton, Great Yarmouth, Devonport, Burton on Trent, King's Norton, Derby, Newport (Mon.), or Cardiff, the proportion per cent. rose to 4·0 in Blackburn, 4·1 in Gateshead, 4·7 in Bootle, 4·8 in South Shields, 4·9 in St. Helens, 5·3 in Smethwick, and 6·6 in Warrington.

Inquests.

Inquests were held in England and Wales concerning 8218, or 7·1 per cent., of the total deaths, the mean proportion in the ten preceding third quarters having been 6·0 per cent. In the 76 great towns the proportion of inquest cases was 7·8 per cent., ranging from 0·9 in Handsworth, 1·4 in Tottenham, 1·6 in Hornsey, 2·0 in Smethwick, 2·7 in Leyton, and 2·9 in King's Norton, to 10·0 in London and in Halifax, 10·6 in Great Yarmouth, 10·9 in West Bromwich, 11·2 in Derby, and 12·7 in Devonport.

Deaths in Public Institutions.

The total deaths registered in England and Wales included 19,131, or 16·6 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding third quarters having been 12·4 per cent. In the 76 great towns the deaths in public institutions averaged 22·5 per cent. of the total deaths, the lowest percentages in the several towns being 2·8 in Rhondda, 3·5 in Bournemouth, 6·0 in Smethwick, and 7·0 in Hastings; and the highest 20·5 in Newcastle on Tyne, 24·2 in Manchester, 24·3 in Birmingham, 25·4 in Brighton, 27·4 in Liverpool, and 34·9 in London.

LONDON.

The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London which occurred in the Willesden Workhouse at Hackney, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth and Streatham, and in the Metropolitan Asylums Board Hospitals within registration London. The death-rate thus computed was equal to 15·3 annually per 1000 from all causes, and to 2·71 per 1000 from the principal epidemic diseases (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London be excluded, the rates will not exceed 14·7 and 2·67 per 1000 respectively. Table X. shows the death-rate in London after this correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the twenty-nine Metropolitan Boroughs, corrected by the distribution of all deaths in public institutions to the Boroughs to which the deceased persons had belonged, are also shown.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual death-rate per 1000 living last quarter was 15·1 in Edinburgh, 15·7 in Glasgow, 20·8 in Dublin, and 17·7 in Belfast, against 15·3 in London.

COLONIAL AND FOREIGN CITIES.

From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-four of the Colonial and Foreign cities, with an aggregate population estimated at more than twenty millions, corresponded to an annual rate of 19·9 per 1000 persons living, against a rate of 15·3 in seventy-six great English towns.

In twenty-one European and American cities the mean rate was 18·1 per 1000, against 15·3 in seventy-six great English towns. In Paris the rate was 15·8, in Vienna 17·1, and in New York 19·1, against 15·3 in London. The rate for Berlin cannot be stated, as no copies of statistical returns have been received from that city during the current year. Among the other cities the death-rates ranged from 11·6 in Christiania, 12·1 in Stockholm, and 12·5 in Amsterdam, to 21·0 in Venice, 21·6 in Munich, 25·0 in Trieste, and 28·9 in Moscow. Among the Indian cities, the death-rate rose to 40·1 in Madras and 43·9 in Bombay.

Small-pox caused 55 deaths in Bombay, 41 in New York, 19 in Moscow, 18 in Boston, 15 in Madras, 13 in Philadelphia, and 10 in Calcutta. In proportion to population, *measles* was most fatal in Bombay, Antwerp, Amsterdam, and St. Petersburg; *scarlet fever* in Moscow, Hamburg, Prague, and Buda-Pesth; *diphtheria* in St. Petersburg and New York; *whooping-cough* in Christiania and in Munich; "*fever*" in the Indian cities, and in St. Petersburg, Venice, and New Orleans; and *diarrhæal diseases* in the Indian cities, and in St. Petersburg, Moscow, Munich, Trieste, Venice, and New York.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales during the third quarter of the year 1902 (*see* pages xxiii.-xxvi.).

In this Table 0.00 indicates that the deaths were too few to give a rate of 0.005; where *no death* occurred — is inserted.
Note.—The rates for the County of London do not in all cases agree with those in Table vi, page xvii.; for explanation, see page ix.

TABLE XI.—**Mortality** from **Diarrhoea**, and **Meteorology**, in **LONDON**, in the Third or Summer Quarter of each of the Thirty Years 1873-1902.

YEARS.	Estimated Population in middle of each Year.	MORTALITY from DIARRHOEA.		Mean Temperature of the Air.	RAINFALL.	
		Deaths.	Annual Rate per 1000.		Amount in Inches.	Number of Days on which measured.

^a The Registration or Union Counties consist of groups of Registration Districts, which are generally co-extensive in that Registration County in which the principal town of the district, or the greater part of the population, is situated.

^b These areas have been revised by the Ordnance Survey Department for the Report on the Census of 1901. For London, Surrey, Kent, Sussex, Hampshire, Middlesex, Essex, Gloucestershire, Staffordshire, Worcestershire and their constituent districts and sub-districts revised populations have been inserted: for England and Wales the

^c The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^d See page 6, note b.

^e On 1st April, 1901, part of Hornsey sub-district (129-1) was transferred from Middlesex to London. The average for the Midland Division.

NOTE—The Registrars alone must be considered responsible for the accuracy of the figures.

REGISTRATION COUNTIES, and REGISTRATION DISTRICTS of ENGLAND; Births and DEATHS under one year of Age, and of PERSONS aged 60 years and upwards from SCARLET FEVER, WHOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE, also DEATH, registered in the Quarter ended 30th September 1902, in the DIVISIONS and REGISTRATION SUB-DISTRICTS of ENGLAND AND WALES.

Divisions and Registration Counties.*	The DEATHS in the Quarter are stated by the Registrars to include													
	Deaths of		Deaths from									Inquest Cases.	Deaths in Public Insti- tutions.	Uncertified Causes of Death.
	Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Cholera.	Violence.

with the Poor Law Unions. A District which extends into two or more Geographical Counties is included entirely or partly. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of the Poor Law Unions. They do not include space occupied by foreshore or tidal water of rivers and creeks. Warwickshire, Nottinghamshire, Lancashire, Yorkshire, Durham, Northumberland, and Glamorganshire, and the revised totals have been retained.

For this part cannot be ascertained and are included in the figures given for Middlesex and for the South

Marriages Registered in the Quarter ended 30th June 1902 in the DIVISION
Deaths Registered in the Quarter ended 30th September 1902 ; Deaths,
 ALL CAUSES ; and Deaths from SMALL-POX, MEASLES, SCARLET-FEVER, DIP
 INQUEST CASES, DEATHS in PUBLIC INSTITUTIONS, and UNCERTIFIED CAUS
 REGISTRATION COUNTIES, REGISTRATION DISTRICTS

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note ^b.

^b For London, the figures given for the quarter are derived from the Weekly Returns made by the Registrars.

* Except for the districts of Hampshire and Middlesex, for which revised populations have been inserted.

† 107, 108.—On 1st July, 1902, changes were made in the boundaries of these districts. See p. 70.

† 129.—On 1st April, 1901, the boundary of this district was altered. The average number of deaths for the preceding years would be misleading and is, therefore, omitted.

Registration Districts.	Area in Statute Acres.	Enumerated Population, 1901. (Unrevised.)	Marriages Registered in Quarter ended 30 June 1902.	Births Registered in Quarter ended 30 Sept. 1902.	Deaths		The DEATHS in the Quarter are stated by the Registrars to include

The Registration Sub-districts (2056 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district is within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; H indicates a Hospital or Infirmary; and L a Lunatic Asylum.

See page 2, note b.

* See page 6, note b.

1. 1.—On 1st August, 1902, the sub-districts of Bloomsbury and St. Giles South, and St. Giles North were united and are now St. Giles and Bloomsbury. See p. 70. The births and deaths are shown as if the change had taken place at the beginning of the quarter.

* Except for the sub-districts of Middlesex, for which revised populations have been inserted.

† 129 : 1.—In consequence of changes of boundary on 1st April, 1901, the average number of deaths for the preceding years would be misleading, and is therefore omitted.

* Except for the sub-districts of Essex, for which revised populations have been inserted.

† 186 : 5, 6, 7.—On 1st August, 1902, changes were made in the boundaries of East Ham and Wanstead sub-districts. East Ham was divided into two sub-districts, viz.: North East Ham, and South East Ham. See p. 70. The births and deaths are shown as if the change had taken place at the beginning of the quarter.

† 193 : 1.—On 1st August, 1902, the sub-districts of Rayleigh and Rochford were united and called Rochford. The births and deaths are shown as if the change had taken place at the beginning of the quarter.

* 193 : 2.—Of the 13 deaths from diphtheria 11 occurred in the Borough of Southend on Sea.

9: 2, 3, 4.—On 1st August, 1902, the sub-district of Gyffylliog was abolished and its constituent parishes transferred to the sub-districts of Ruthin, Llanelidan, and Llanrhaiadr. See page 71. The births and deaths are shown as if the change had taken place at the beginning of the quarter.

18: 3.—The 4 deaths from scarlet fever occurred in Wrexham Rural District.

20: 2.—The 4 deaths from whooping cough occurred in the parish of Llanfairtalhaiarn.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 30TH SEPTEMBER, 1902.

Changes in Registration boundaries are made by order of the Registrar-General with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

Date when change came into operation.	DISTRICT and Sub-district.				Name of Parish transferred.	Population 1901.
	Decreased by change.		Increased by change.			
	Name.	No.	Name.	No.		
1902. 1 Aug.	11.—ST. GILES :—On this date Bloomsbury and St. Giles South (1) and St. Giles North (2) were united and called St. Giles and Bloomsbury (1).					
"	12.—STRAND :—On this date St. Martin in the Fields (1) and Strand (2) were united and called Strand (1).					
1 Sept.	18.—ST. GEORGE IN THE EAST :—On this date St. George North (1) and St. John (2) were united and called St. George and St. John (1).					
1 Aug.	19.—STEPNEY :—On this date Shadwell (1) and Ratcliff (2) were united and called Shadwell and Ratcliff (1). Limehouse was re-numbered (2).

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE
QUARTER ENDING SEPTEMBER 30TH, 1902.

EXTRACTED FROM THE
MONTHLY WEATHER REPORTS
OF THE
METEOROLOGICAL OFFICE
BASED ON OBSERVATIONS AT 116 STATIONS.*

JULY, 1902.

General Summary.—During the early part of the month the weather was mostly fair in all but the extreme western and northern parts of the kingdom; thunderstorms were, however, experienced at several of the English stations on the 1st, and again on the 10th. After the middle of the period the conditions became very unsettled, and in the closing week rain was general, the amount on the 25th and 26th being large at many of the western and northern stations. The latter part of the month was also very cool, especially in the northern districts; on the 24th snow was seen on the hills around Braemar. Pressure was high, but temperature was below the normal; the winds were chiefly from the Westward; rainfall was less than the average in most districts, but showed an excess at several of our north-western stations; bright sunshine was rather deficient in all but the southern districts.

Pressure.—*Mean* at 8 a.m. ranged from 30.05 ins. and upwards in the extreme southern and south-western parts of the United Kingdom to 29.90 ins. and less in the north-east of Scotland, and to 29.85 ins. and less in the Shetlands. The mean values were above the average; and as the excess was greatest in the western and least in the eastern districts, the gradient was in favour of winds from the northward, rather than from the southward, of West. *Highest* readings were recorded mostly on the 2nd or 3rd, when the barometer rose to 30.3 ins. and upwards in the south and south-east of England, and to 30.2 ins. and upwards in all other parts of the United Kingdom. In the western and northern districts, however, the readings were equally high on the 5th, while in the south-western districts they were again as high on the 11th. *Lowest* readings were recorded during the passage of a deep cyclonic system on the 26th, the barometer falling a little below 29.2 ins. over the Irish Sea, and below 29.4 ins. in all other localities excepting the south-east of England. *Range* agreed fairly with the normal for the time of year.

Depressions.—Very few depressions of note were observed in the immediate neighbourhood of our islands, the only important systems being those of the 9th—10th, and the 26th—28th. In the former case, the centre passed in an east-south-easterly direction across the north of Scotland, the disturbance being at first of moderate depth, but increasing considerably in intensity during its subsequent passage across the North Sea. The depression of the 26th—28th was of unusual depth for the month of July, and occasioned slight gales on many parts of our coasts, the centre in this instance moving north-eastwards directly over the United Kingdom, the North Sea, and Scandinavia. Throughout nearly the whole month the northern parts of the Continent were affected by low pressure areas which either formed in those regions, or which advanced from the northward or north-westward, their secondaries moving in some instances south-eastwards across Great Britain and the North Sea.

* Tables of observations from 28 stations specially contributed for the information of the Registrar-General are given on pp. 78–81. Of these stations 21 are not included in the 116 upon the observations at which the General Remarks are based.

Anticyclones.—During the earlier half of the month several high pressure areas spread temporarily over our islands from the Atlantic, but in most instances the systems soon moved away to the southward and dispersed. Later on the conditions became cyclonic, and remained so until quite the close of the period, when another high pressure system extended over us from the westward. The anticyclones observed were in all cases of very moderate intensity.

Winds.—The prevailing winds were Westerly, inclining to the South-westward over England, but to the North-westward in Ireland and Scotland. Gales were rather numerous on our extreme north-west coasts; at Malin Head they occurred on as many as 7 days, and at Blacksod Point on 6 days. Elsewhere they were rare, few districts however escaping entirely the effects of the very strong cyclonic winds which occurred with the depression of the 26th—28th.

Temperature.—*Mean at sea level* ranged from 61° and upwards over a considerable portion of the south of England (in some few localities it exceeded 62°), and 59° and upwards in the south and south-east of Ireland, to 54° and less at most places in the north of Scotland, and to 50° and less in the Shetlands. In spite of small local irregularities, the general distribution over our islands was in fair agreement with the normal. The actual values were, however, in all cases, below the average; the deficit being small in the southern, but large in the northern and north-western districts. *Highest* readings were observed on the 5th or 6th at some of the northern stations, but mostly between the 14th and 16th; on the latter dates the thermometer exceeded 80° in many parts of England, the highest readings reported being 87° in London, 86° at Cambridge, and 85° at Colly Weston, Bramley, and Southampton. *Lowest* readings were recorded at various times in the different districts, but mostly on the 2nd or 3rd, the 12th or 13th, or between the 21st and 26th; on each of these occasions the sheltered thermometer fell below 40° at several of our northern and central stations, slight frost being recorded in some places by the instruments exposed on the grass. *Range* was moderate in Ireland and Scotland, but large over the inland parts of England; at Loughborough, Glaston, and Cirencester it amounted to 45° , and at Cambridge to 46° . *Vapour Pressure* was high on our southern coasts, where the values ranged between 0.40 in. and 0.44 in.; in the north and east of Scotland it was below 0.34 in., and in the Shetlands below 0.30 in., the difference between the pressure in the extreme northern and southern districts being unusually large. *Relative Humidity* varied from 92 per cent. at Malin Head, and between 85 and 90 per cent. on the west and south-west coasts of Great Britain to 75 per cent. or less in the east of Scotland and the eastern and central parts of England.

Rainfall was generally deficient, but, owing mainly to a heavy fall on the 25th, it was in excess of the average in the north of Ireland and at some stations bordering on the Irish Sea. The largest aggregates reported were 4.6 ins. at Glencarron, 4.4 ins. at Cally (Gatehouse) and Armagh, and 4.2 ins. at Malin Head; the smallest being 0.6 in. at Oxford, 0.7 in. at Littlestone-on-Sea, and 0.8 in. at Cambridge and Dungeness. Heavy falls occurred in some parts of eastern and central England on the 1st, and in the south-western parts of the kingdom on the 19th. The largest daily amounts were, however, recorded on the 25th and 26th. On the former date more than an inch fell at several western stations, and amounts varying between 1.8 ins. and 2.4 ins. in the neighbourhood of Dublin; on the latter date more than an inch was measured at many places in the south of Scotland and the extreme northern parts of England and Ireland, the largest amount reported being 1.4 in. at Newcastle-on-Tyne.

Bright Sunshine differed but little from the average, a trifling excess being shown at most of the southern stations, but a slight deficit elsewhere. The percentage of the possible duration ranged from 57 at Guernsey and Jersey, and 50 or slightly above it at several of the other English Channel stations, to only 20 at Edinburgh and Newcastle-on-Tyne, and to rather less than 20 in the north of Scotland.

AUGUST, 1902.

General Summary.—The weather of August was for the most part cool and very changeable, with occasional thunderstorms in most districts, the latter being accompanied in many instances by exceedingly heavy falls of rain or hail. Pressure was slightly above the normal in the north, but below it in the south; temperature was low, especially over the northern parts of Great Britain; the winds were rather variable in the west, but chiefly from the Westward in the eastern and central districts; rainfall was in excess of the average over the greater part of England, but was deficient in Ireland and Scotland; bright sunshine amounted to less than the normal in all the more eastern, central, and southern parts of the kingdom, but showed an excess at several of our western and extreme northern stations.

Pressure.—*Mean* at 8 a.m. ranged from 29·95 ins. and upwards over the English Channel to 29·85 ins. and less in the extreme north of Scotland and to very little above 29·80 ins. in the Shetlands, the general distribution being favourable for winds from the Northward rather than from the Southward of West, as in a normal August. The mean values differed but little from the average, but owing to a slight excess in the north and a deficit in the south, the gradient was less decided than that shown by the normal chart. *Highest* readings were observed as a rule on the 1st, when the barometer exceeded 30·2 ins. over Ireland, Wales, and the central parts of England, and exceeded 30·1 ins. at all but our extreme northern stations. In the south-western districts the mercury rose quite as high, or even higher, on the 9th, the readings being then above 30·2 ins. in most places, and above 30·3 ins. in the south-west of Ireland. *Lowest* readings were registered on the 18th, when the barometer fell below 29·5 ins. in the east of Scotland and the northern parts of England and Ireland, and below 29·7 ins. at all but our most south-eastern stations. *Range* was moderate for the time of year.

Depressions.—The depressions which traversed our islands or their immediate neighbourhood were few in number and of little intensity. Most of the barometric minima which appeared over Western Europe showed a marked inclination to travel eventually on towards Sweden and Northern Russia, the same tendency being observed also throughout the month of July. Between the 10th and 13th a depression, which was originally developed over the south of Norway, moved slowly and in a very erratic path over the south of Sweden, the disturbance ultimately passing away over the Baltic and filling up.

Anticyclones.—Three such systems were observed. The first spread over Western Europe from the Atlantic at the end of July, but moved away to the southward and dispersed soon after the commencement of the month. The second hung almost stationary off our south-west coasts between the 9th and 12th, its borders extending temporarily over all our western and southern districts on the 9th and again on the 11th; on the 13th it moved southwards and dispersed. The third spread over our islands from the south-westward on the 21st, but soon passed away to Central Europe and eventually to Russia.

Winds.—Winds were mainly from the Westward (South-west to North-west) in the eastern parts of the United Kingdom, but showed considerable variability in the west. A complete absence of gales was reported on all but our extreme western coasts—a very unusual feature in the month of August.

Temperature.—*Mean at sea level* ranged from a little above 62° at Southampton and Jersey, and from 60° and upwards over the south of England generally to 55° and less over the northern and central parts of Scotland, and to a little below 50° in the Shetlands. Over the southern half of the kingdom the general distribution was in fair accordance with the normal, but in all the more northern districts the ordinary summer type was far less clearly marked than usual. The actual mean values were, in all cases, below the average, the deficit being small at our extreme southern and south-western stations, but large in the north; at many stations in the northern parts of Great Britain it amounted to more than 3°, and at Marchmont, Durham, and Scarborough to more than 4°. *Highest* readings occurred at various times in the different districts. In the west they were observed mostly between the 14th and 18th, and at the majority of the northern stations between the 22nd and 26th, but in the east and south of England they occurred more commonly on the 29th. In the northern parts of Ireland and Scotland the thermometer did not reach 70°, but at many of the English and Welsh stations it exceeded 75°, the highest readings reported being 81° in London and at Cambridge, and 80° at Bramley. *Lowest* readings also occurred at various times—mostly on or about the 11th over England, but in the concluding week in Ireland and Scotland. At one or other of these times the sheltered thermometer fell below 40°, the lowest values reported being 34° at Braemar, and 35° at Fort Augustus, Marchmont, and Dublin (Phoenix Park); at some of our northern stations a slight ground frost occurred on the nights of the 11th and 20th. *Range* was generally moderate (especially in the north, where the absolute maxima were unusually low), but amounted to more than 35° at several of the English stations, and to 40° at Geldeston. *Vapour Pressure* was high in the south, the values at most of the Channel stations being above 0·45 in.; in the northern parts of Great Britain they decreased to 0·35 in., or less, and in the Shetlands to about 0·30 in. *Relative Humidity* ranged from 90 per cent. at Dungeness, 89 per cent. at Donaghadee, and 85 per cent. or more over the western, central, and extreme northern parts of the kingdom generally to 79 per cent. at Yarmouth, and 76 per cent. at Leith.

Rainfall was in excess of the average over the eastern, central, and southern parts of England, but was less than the normal in most other districts, the deficit being considerable at many of the Scotch and Irish stations. The largest aggregates reported were 6·8 ins. at Laudale, 5·6 ins. at Glencarron, 5·0 ins. at Killarney; the smallest being 1·5 in. at Newton Reigny, 1·7 in. at Leith, and 1·8 in. at Durham and Spurn Head. The number of days with rain was large, more than 20 being recorded at several stations situated in all parts of the kingdom, and as many as 25 at Strathpeffer. Heavy individual falls (exceeding an inch in 24

hours), and accompanied in most instances by thunderstorms, were experienced in many places, the largest daily amounts reported being 2·0 ins. at Laudale on the 22nd, and 1·6 in. at Hillington on the 6th. At Fulbeck a thunderstorm with *very* heavy hail occurred on the 28th, the fall amounting to 1·05 in. in 90 minutes.

Bright Sunshine amounted to more than the average in Ireland, the north-west of England, and the west and north of Scotland, but showed a deficiency in all other districts, the departure from the normal being rather large in the south of England. The percentage of the possible duration ranged from 49 at Jersey, 47 at Falmouth, and 40 or more at several of our western and southern stations to 25 or less at many places in the northern and central parts of Great Britain, and to only 18 at Fort Augustus.

SEPTEMBER, 1902.

General Summary.—The changeable weather which had prevailed during the summer months continued throughout the earlier half of September, strong South-westerly gales and heavy rains being experienced in the west and north on the 2nd and 3rd, and further heavy rains over our central and southern districts on the 10th. On the latter date the newspapers reported the occurrence of a disastrous hail storm in mid-Kent. After the middle of the month a decided improvement took place in all but the western districts, the change to autumn being however shown in the occasional prevalence of night fogs and frosts at many of the inland stations. Pressure was above the average; temperature was slightly below the normal over England, but above it in Ireland and the west of Scotland; the winds varied greatly in direction; rainfall was deficient in all but the extreme north-western parts of the kingdom; bright sunshine was fairly abundant over England and Ireland, but was less than the normal in Scotland.

Pressure.—*Mean at 8 a.m.* ranged from 30·05 ins. and upwards over the greater part of England, where the isobar showed a distinct anticyclonic trend, to 29·95 ins. and less in the extreme north of Scotland, and to very little above 29·90 ins. in the Shetlands. The actual values were in all cases above the average, and as the excess was greatest (0·12 in. to 0·14 in.) in the extreme north, and least (0·06 in. to 0·08 in.) in the south, the gradient over the United Kingdom was slighter than that shown by the normal chart. *Highest* readings were observed between the 26th and 28th when the barometer rose to 30·5 ins. and upwards at several of our northern and central stations, and to 30·4 ins. and upwards in most other places. *Lowest* readings occurred on the 3rd or 4th, when the mercury sank below 29·0 ins. in the west and north of Scotland and below 29·5 ins. in most of the other western and northern districts; in the south and east of England it did not fall below 29·6 ins. *Range* was moderate for the time of year.

Depressions.—Very few depressions of any importance appeared over our islands or their immediate neighbourhood. The most striking instance occurred between the 2nd and 3rd, when a cyclonic disturbance of growing intensity advanced suddenly from the southward and moved in a north-north-easterly direction across the St. George's Channel, the Irish Sea and the west of Scotland, the system afterwards passing on to the Norwegian coasts where it gradually dispersed. The progress of this depression was accompanied by heavy falls of rain over our western districts (especially in Ireland and the west of Scotland) and by strong gales from the south-westward and westward over Wales and the west and north of England. Throughout the earlier half of the month the northern parts of the continent were again affected (as in July and August) by numerous depressions, some of which advanced from the Atlantic, while others were developed immediately over the Scandinavian peninsula.

Anticyclones.—On the 5th and 6th an anticyclone spread from the south-westward over our islands and the western parts of the continent, but on the 9th the system apparently broke into two portions,—one moving away to Central Europe and the other to the northward of Scotland. On the 17th and 18th a larger anticyclone advanced over Western Europe from the Atlantic, and in the course of the next few days continued to move very slowly eastward, its central area remaining almost stationary over Denmark, North Germany and the south of Scandinavia between the 21st and 23rd. On the 25th the system apparently spread westward again, and between the 26th and 29th its central portion was situated directly over the United Kingdom; at the close of the month, however, the entire system was drifting away to the northward.

Winds.—The winds varied greatly in direction, but in the northern parts of the United Kingdom they were commonly from some Westerly point (South-west to North-west); in many places calms were unusually prevalent. Scarcely any gales were reported in the north, but in other parts they were more frequent, the south-westerly storm of the 3rd being severe at some of our western and south-western stations.

Temperature.—*Mean at sea level* ranged from about 60° in the Scilly and Channel Islands, and from 58° and upwards in the extreme south of England generally to 53° or less on the north and east coasts of Scotland and to very little above 49° in the Shetlands. The general distribution over our islands was somewhat irregular, the most important feature being shown in the lingering of the ordinary summer type (warm inland, cool on coast) over the north of Scotland. Over the greater part of England, and also on the north and east coasts of Scotland, the mean values were below the average, but in other districts they were as a rule above it, the departure in either direction being slight, excepting at Lairg where the actual value was nearly 4° above the normal. *Highest* readings occurred at various times in the different districts, but most commonly on the 2nd and 3rd, between the 8th and 10th, or between the 21st and 23rd. Over the greater part of Ireland and Scotland and at most of the English Channel stations the thermometer did not reach 70°; at Killarney, however, it rose to 74°, and at Ochertyre to 76°. Over England, readings above 70° were observed in most places, the highest reported being 77° in London and 76° at Cambridge. *Lowest* readings occurred as a rule either on the 13th or on the 18th or 19th, slight frost being observed on each occasion at many of our northern and inland stations. The lowest temperatures reported were:—In the screen, 30° at Lairg, Fort Augustus and Newton Reigny, and 31° at Cally and Swarraton; on the grass, 28° at Ochertyre and Fort William and 30° at Harrogate and Oxford, the latter readings being observed on the night either of the 12th or 18th. *Range* was moderate. *Vapour Pressure* ranged from 0·40 in. or rather more on several parts of our south and south-west coasts to 0·35 in. or less over the northern and central parts of Great Britain generally, and to about 0·30 in. in the Shetlands. *Relative Humidity* varied from between 90 and 93 per cent. in the extreme northern and north-western parts of the United Kingdom to 85 per cent. or less on several parts of the English and Welsh coasts and to 77 per cent. at Jersey.

Rainfall amounted to less than the average over the country generally, but owing to a heavy fall on the 2nd and 3rd it exceeded the normal in the north and east of Ireland and also at some places in the west of Scotland. Over all the eastern and central parts of Great Britain the deficit was as a rule very large, many stations having less than half the normal quantity, and some places in the north-east of England less than one fourth. The largest aggregates reported were 7·6 ins. at Glencarron, 7·4 ins. at Laudale and 5·3 ins. at Fort William; the smallest being 0·3 in. at Spurn Head, 0·4 in. at York and 0·5 in. at Newcastle-on-Tyne. In the east and south of England the number of days with rain was also small, less than 10 being reported in many places, and only 6 at Cambridge. More than 2 ins. of rain fell in several parts of Ireland and the west of Scotland on the 2nd or 3rd, the largest amounts reported being 2·9 ins. at Greystones (co. Wicklow), 2·8 ins. at Kingstown, 2·3 ins. at Glencarron and 2·1 ins. at Dublin (City) and Kilkenny. A heavy fall (accompanied in many places by thunderstorms) occurred also over Central and Southern England on the 10th, the amounts being as large as 1·8 in. at Felixstowe and 1·0 in. at Hereford. Large quantities were experienced, locally, at Hastings (1·6 in.) on the 2nd, and at Portland Bill (1·8 in.) on the 6th.

Bright Sunshine was in excess of the average in most parts of England and Ireland, but was deficient in Scotland, the total duration at Edinburgh being less than half the average. The percentage of the possible amount ranged from 57 at Clacton-on-Sea, and 50 or more on the south and south-east coasts of England generally, to 25 or less at most stations in the northern parts of Great Britain, to 16 at Fort William and to only 14 at Edinburgh.

NOTES ON THE SPECIAL TABLES ON pp. 78-81.

Temperature.—In September the minimum temperature at Barnet was as low as 30°·0, while at Carlisle it was 29°·6 and at Llangammarch Wells it fell to 28°·2.

Thunderstorms occurred in July on the 1st at Barnet; on the 10th at Eastbourne, Hull, and Osborne; on the 18th at Osborne; and on the 26th at Bath.

In August on the 8th at Eastbourne; on the 14th at Salisbury; on the 16th at Bath, Guernsey, Osborne, Portsmouth and Salisbury; on the 20th at Hull; and on the 27th and 28th at Leeds.

In September on the 5th at Portsmouth; and on the 9th at Eastbourne, Guernsey, Osborne, Portsmouth, and Salisbury.

Thunder was heard but **lightning** was not seen in July on the 1st at Osborne; on the 10th at Bath; on the 17th at Hull; and on the 26th at Stonyhurst.

In August on the 6th at Salisbury; on the 8th at Osborne; on the 17th at Bath; and on the 27th at Halifax.

In September on the 5th at Eastbourne and Osborne; on the 10th at Oxford; on the 22nd at Guernsey and Llandudno; and on the 23rd at Guernsey.

Lightning seen but thunder not heard :—In July, no instance recorded.

In August on the 9th at Eastbourne ; on the 28th at Eastbourne and Hull ; and on the 29th at Truro.

In September on the 1st at Eastbourne.

Solar Halos seen :—In July on the 2nd at Halifax and Liverpool ; on the 3rd at Osborne ; and on the 13th and 16th at Halifax.

In August on the 2nd, 15th, 16th, and 26th, at Osborne, and on the 27th at Liverpool.

In September on the 6th at Osborne ; on the 19th at Liverpool, Osborne, and Oxford ; on the 20th at Osborne, Oxford and Salisbury ; on the 21st at Oxford ; and on the 25th at Liverpool.

Lunar Halos seen :—In July on the 18th at Liverpool.

In August, none.

In September on the 12th, 13th, and 14th, at Llandudno ; on the 15th at Llandudno and Osborne ; on the 16th, 17th, 18th, and 19th, at Llandudno ; on the 20th at Llandudno, Osborne, and Oxford ; and on the 21st at Llandudno.

Snow was not observed during the quarter.

Hail fell in July on the 10th at Barnet, Eastbourne, Hull, Osborne, and Ventnor.

In August on the 20th at Hull.

In September on the 10th at Portsmouth.

Fog prevailed in July on the 8th at Hull ; on the 9th at Guernsey ; and on the 22nd at Halifax.

In August on the 14th at Hull ; on the 15th at Eastbourne and Hull ; on the 21st at Salisbury ; on the 22nd at Guernsey ; on the 26th at Leeds ; and on the 29th at Hull.

In September on the 1st at Hull ; on the 2nd and 5th at Salisbury ; on the 7th at Hull ; on the 8th at Cambridge, Hull, Llandudno, Oxford, and Salisbury ; on the 9th at Hull and Oxford ; on the 19th at Oxford ; on the 20th at Hull ; on the 23rd at Hereford ; on the 24th at Hull and Liverpool ; on the 25th at Cambridge, Hull, and Oxford ; on the 26th at Hull, Oxford, Salisbury and Stonyhurst ; and on the 27th at Cambridge, Oxford, and Salisbury.

MONTHLY METEOROLOGICAL TABLES FOR THE QUARTER ENDING SEPTEMBER 30TH, 1902.

NOTE.—The values in the following Tables are the results of observations taken each day at 9 a.m. at all the stations, except Guernsey and Oxford where the hour was 8 a.m., at Eastbourne where the hour was 9.30 a.m., and at Halifax (Public Library) and Leeds where the hour was 10 a.m.

The mean values given in the Tables are the averages of the readings taken at the hour of observation. For the Tables up to and including those for the first quarter of 1902 Mr. Glaisher obtained values for the means for the month from observations at fixed hours by the introduction of corrections for the diurnal variation of the several elements. These corrections are given in Glaisher's Diurnal Range Tables, from which the following, appropriate to the months of the current quarter, are extracted :—

Month.	8 a.m.					9 a.m.					10 a.m.				
	Barometer.	Dry-bulb.	Wet-bulb.	Mean of Max. and Min.	Cloud Amount.	Barometer.	Dry-bulb.	Wet-bulb.	Mean of Max. and Min.	Cloud Amount.	Barometer.	Dry-bulb.	Wet-bulb.	Mean of Max. and Min.	Cloud Amount.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING SEPTEMBER 30TH, 1902.

The Observations have been corrected for instrumental errors, and the barometer readings have been reduced to 32° F., but not to sea level. The Hygrometrical results have been deduced from the seventh edition of Glaisher's Hygrometrical Tables.

NAMES OF STATIONS and OBSERVERS.	Height of Station above Sea Level.	Months.	Pressure of Air in Month.		Temperature of Air in Month.				Mean Temperature.		Vapour *		Mean Thermometer.		Wind *				Mean Amount of Ozone.		Rain.			
			Mean.	Range.	Highest.	Range.	Mean.		Air. (Mean of Max. and Min.)	Dew Point.	Elastic Force.		Mean Degree of Humidity.	Moist Weight of Air * of a cubic foot of Air.	Maximum in Rays of Sun.	Minimum on Grass.	Estimated Strength.	Relative Proportion of.			Mean Amount of Ozone.	Number of Days it Fell.	Amount collected.

No. 216.] **Marriages**—*July, August, September, 1902.* [Price 9d.
Births and Deaths—*October, November, December, 1902.*

General Register Office, Somerset House,
26th January, 1903.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1902 is estimated at 41,952,510 persons; that of England and Wales at 32,995,614, that of Scotland at 4,531,299, and that of Ireland at 4,425,597.

In the United Kingdom 289,361 *births* and 176,782 *deaths* were registered in the three months ended 31st December 1902. The natural increase of population was, therefore, 112,579. The number of *persons married* in the quarter ended 30th September 1902 was 169,570.

The birth-rate in the United Kingdom in the *fourth* quarter of 1902 was 27·4, and the death-rate 16·7, per 1000. The marriage-rate in the *third* quarter of 1902 was 16·0 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Emigration.

According to the returns issued by the Board of Trade, it appears that 90,048 emigrants embarked, during last quarter, from the several ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 2324 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom numbered 51,864, of whom 37,619 were English, 6,194 Scottish, and 8,051 Irish, whilst 38,184 others were of foreign nationality. The proportions of emigrants accredited to the several parts of the United Kingdom, per million of the respective estimated populations, were as follows:—England, 1,140; Scotland, 1,367; and Ireland, 1,819. Compared with the averages in the three preceding fourth quarters, the proportion of English emigrants showed an increase of 43·8 per cent., that of Scottish emigrants an increase of 48·4 per cent., and that of Irish emigrants an increase of 26·2 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,057 registration sub-districts of England and Wales during the three months ended 31st December 1902; and the MARRIAGES in 15,428 churches or chapels, in 13,388 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, during the three months ended 30th September 1902.

Marriages.

During the *third* quarter of 1902 the marriages of 142,896 persons were registered, being equal to an annual rate of 17·2 persons married per 1000 of the estimated population, against an average rate of 16·6 per 1000 in the third quarters of the ten years 1892–1901.

Among registration counties the lowest marriage-rates were 12·6 in North Wales, 12·7 in Rutlandshire, 13·0 in Suffolk and in Westmorland, and 13·2 in Norfolk and in Cornwall; the highest rates were 17·2 in Gloucestershire and in Nottinghamshire, 17·3 in Hampshire and in Monmouthshire, 18·1 in Warwickshire, 19·2 in Lancashire, and 21·0 in London.

Births.

The births registered in the *fourth* quarter of 1902 numbered 232,455, and were in the proportion of 28·0 annually per 1000 of the population, the mean rate in the ten preceding fourth quarters having been 28·6. In registration counties the lowest birth-rates during the quarter were 18·5 in Rutlandshire, 21·3 in Sussex, 20·7 in Westmorland, 22·0 in Somersetshire, and 22·1 in Herefordshire; the highest rates were 31·4 in Nottinghamshire, 32·5 in Staffordshire, 32·6 in Northumberland, 32·9 in South Wales, 34·5 in Monmouthshire, and 35·3 in Durham.

In 76 great towns the birth-rate averaged 29·0 per 1000, ranging from 14·4 in Bournemouth, 17·6 in Hastings, 19·2 in Hornsey, 19·3 in Bury, and 19·9 in Halifax, to 35·6 in Middlesbrough, 35·7 in Sunderland, 35·9 in East Ham, 36·1 in St. Helens, 36·2 in South Shields, 38·7 in Wigan, 40·8 in Merthyr Tydfil, and 42·1 in Rhondda. In 103 smaller towns the mean birth-rate was 26·6 per 1000, whilst in the remainder of England and Wales, excluding these 179 towns, it was 27·1.

Natural Increase of Population.

The natural increase of population in England and Wales during the quarter, by excess of births over deaths, was 94,135, against 77,286, 87,949, and 92,079, in the fourth quarters of 1899, 1900, and 1901 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 27s. 3d., 29s. 10d., and 30s. 2d. respectively in the preceding three quarters, was 25s. 0d. last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4½d.; of prime beef, 7½d.; of inferior mutton, 5¾d.; of prime mutton, 8¾d. Compared with the average prices in the preceding three months, the mean price of inferior beef showed a decrease of ¼d., while the price of prime beef remained unchanged; the price of inferior mutton showed a decrease of ⅔d., and that of prime mutton an increase of the same amount. The average price in the London Market of sea-borne coal, put in barge from the collier in the Thames, was 18s. 9d. per ton, against 23s. 1d. and 19s. 5d. per ton in the fourth quarters of 1900 and 1901 respectively. The mean price of 2¾ per cent. Consols was 92l. 19s. 4d., having been 94l. 17s. 4d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been reduced on 6th February from 3½l. to 3l., was raised on 2nd October to 4l. The mean rate during the quarter was 3l. 19s. 9d.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 709,557, of whom 219,166 received in-door, and 490,391 out-door, relief. The proportion of the population in receipt of poor-law relief was 21·5 per 1000, against 21·0 and 21·3 per 1000, respectively, in the fourth quarters of 1900 and 1901.

Meteorology.

Remarks by W. N. Shaw, Esq., M.A., F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 72-82.

The weather in October was mostly cloudy and changeable, especially around the middle of the month. In November it was mostly fair and dry (excepting in the extreme westerly parts of the kingdom) until the last week of the month, when rain fell generally. A keen frost extended over nearly the whole kingdom early in December and lasted until about the middle of the month, when the weather became at first wet and unsettled, and afterwards fair and dry. The last week of the quarter was stormy and rainy, with some snow in most districts.

At Greenwich the mean reading of the barometer during the quarter was 29·721 inches, the highest reading of the thermometer was 67°·1, the lowest was 24°·5, and the mean temperature of the air was 45°·2. At 26 other stations of observation the mean temperature of the air during the quarter ranged from 43°·2 and 43°·3 at two stations in Halifax, 43°·8 at Barnet, and 43°·9 at Llangammarch Wells, to 47°·0 at Portsmouth, 47°·2 at Llandudno, 47°·5 at Barnstaple, 48°·2 at Ventnor, 48°·6 at Truro, and 49°·5 in Guernsey.

The amount of rain measured during the quarter at the Royal Observatory was 4·03 inches, of which 1·24 inches fell in October, 1·29 inches in November, and 1·50 inches in December. At 26 other stations of observation the rainfall during the quarter ranged from 3·42 inches at Cambridge, 4·77 inches at Camden Square, 4·80 inches at Barnet, and 4·81 inches at Nottingham, to 10·08 inches at Barnstaple, 11·22 inches at Stonyhurst, 11·64 inches at Guernsey, 12·03 inches at Truro, and 13·69 inches at Llangammarch Wells.

The duration of bright sunshine recorded at the Royal Observatory was 131·7 hours, being 15·7 per cent. of the time during which the sun was above the horizon; the mean proportion in the ten preceding fourth quarters having been 18·6 per cent. The duration of bright sunshine showed a deficiency of 34·8 hours in October, but was 6·1 hours above the average in November, and 3·9 hours above the average in December.

Deaths.

The deaths registered in England and Wales last quarter numbered 138,320, and were in the proportion of 16·6 annually per 1000 persons living, the average rate in the ten preceding fourth quarters having been 17·4. In registration counties the death-rates ranged from 11·9 in Westmorland, 13·0 in Dorsetshire, 13·1 in Rutlandshire, 13·3 in Oxfordshire, and 13·4 in Sussex, to 18·0 in South Wales, 18·1 in Durham, 18·3 in Staffordshire, 18·6 in Monmouthshire, and 18·9 in Lancashire.

The 138,320 registered deaths included 71,431 of males and 66,889 of females, the death-rate among males being 17·8, and that among females 15·6, per 1000 of the estimated populations of the respective sexes. Compared with the averages in the ten preceding fourth quarters the death-rate of males showed a decrease of 0·6, and that of females a decrease of 0·9, per 1000 living of each sex respectively. Out of equal numbers living, the deaths of males were to those of females as 114 is to 100, against a proportion of 111 to 100 in the fourth quarters of the ten preceding years.

Urban and Rural Mortality.

In 76 great towns, of which the aggregate population in the middle of 1902 is estimated at nearly fifteen millions, the death-rate was 17·9 per 1000 living, or 1·3 in excess of the death-rate in the whole country. The rates in the several towns ranged from 8·8 in Hornsey, 10·3 in Leyton, 11·4 in Handsworth, 11·5 in King's Norton, and 11·9 in Bournemouth, to 21·9 in Stockport, 22·0 in Preston, 22·1 in Bootle, 23·8 in Merthyr Tydfil, 24·2 in Liverpool, and 25·2 in Hanley.

In 103 smaller towns, with an aggregate population estimated at more than three and a half millions in the middle of 1902, the death-rate was 15·8 per 1000 living, or 2·1 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with a population of nearly fourteen and a half millions of persons, of whom nearly seven millions live in small towns, and nearly seven and a half millions in rural districts, the death-rate was 15·4.

Mortality at Different Ages.

Of the 138,320 deaths registered last quarter, 34,598 were those of infants under one year of age, 62,752 those of persons aged between one year and sixty years, and 40,970 those of persons aged sixty years and upwards.

The mortality of infants, measured by the proportion of deaths under one year of age to registered births, was 149 per 1000, the average in the ten preceding fourth quarters having been 148. In registration counties the lowest proportions per 1000 births were 83 in Hertfordshire, 84 in Westmorland, 88 in Huntingdonshire, 94 in Dorsetshire, and 95 in Oxfordshire; the highest proportions were 164 in Durham, ~~166 in London~~, 175 in Derbyshire, 177 in Lancashire, 179 in Staffordshire, and 181 in Nottinghamshire.

In the 76 great towns infant mortality averaged 166 per 1000 births, being 17 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 92 per 1000 in Bournemouth, 93 in Burton on Trent and in York, and 98 in Leyton; the highest were 201 in Salford, 205 in Wolverhampton, 206 in Merthyr Tydfil, 208 in Middlesbrough, 224 in West Bromwich, 239 in Preston, 261 in Stockport, and 280 in Hanley. Among the 103 smaller towns infant mortality averaged 156 per 1000 births, ranging from 70 in Watford, 72 in Tunbridge Wells, 76 in Reigate, 77 in Folkestone, and 79 in Colchester, to 221 in Barnsley, 226 in Radcliffe, 229 in Chesterfield, 232 in Stoke on Trent, 238 in Keighley, 247 in Gorton, 251 in Burslem, and 333 in Farnworth. Excluding these 179 towns, infant mortality in the remainder of England and Wales was in the proportion of 126 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 8·4 per 1000 of the estimated population at this group of ages, being 0·7 below the mean rate in the ten preceding fourth quarters. In the 76 great towns the mean mortality at this age-group was 9·5 per 1000, ranging from 3·9 in Hornsey, 4·7 in Handsworth, 4·9 in Willesden, 5·2 in King's Norton, 5·5 in Aston Manor, and 5·6 in Leyton, to 12·3 in Hanley and in Merthyr Tydfil, 12·5 in Newport (Mon.), 13·7 in Bootle, and 15·0 in Liverpool.

Among persons aged sixty years and upwards the mortality was at the annual rate of 66·6 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding fourth quarters having been 67·6. In the 76 great towns the mean mortality was 70·0 per 1000, the lowest rates being 37·4 in Leyton, 47·7 in Coventry, 47·8 in King's Norton, and 50·5 in Hornsey, and the highest 80·1 in Liverpool, 81·3 in Rochdale, 81·7 in Wolverhampton, 81·9 in Huddersfield, 83·9 in Sunderland, 84·4 in Bury, 85·6 in Hanley, and 90·2 in Preston.

Compared with the mean rates in the ten preceding fourth quarters, the mortality of infants under one year of age showed an increase of 0·7 per cent., that of persons between one year and sixty years of age a decrease of 7·7 per cent., and that of persons aged sixty years and upwards a decrease of 1·5 per cent.

Mortality from certain Epidemic Diseases.

The 138,320 deaths from all causes include—

3,796	that were attributed to measles,
3,461	" " diarrhœa,
2,135	" " diphtheria,
1,869	" " whooping-cough,
1,361	" " scarlet fever,
1,285	" " "fever,"
and 103	" " small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 14,010 deaths were referred during the recent quarter, being in the proportion of 1·68 annually per 1000 of the population, or 0·13 below the mean proportion in the fourth quarters of the preceding ten years.

The mortality last quarter from measles and diarrhœa was above the corrected average in the corresponding quarters of the preceding ten years. The mortality from small-pox was equal to the average, whilst the mortality from scarlet fever, diphtheria, whooping-cough, and "fever" was in each case below it.

The deaths referred to *measles* numbered 3,796, and were equal to a mortality of 0·46 annually per 1000 living, which is above the corrected average rate for the fourth quarter of the year by 0·07 per 1000. The highest county rates last quarter were 1·06 in Gloucestershire, 1·56 in the East Riding of Yorkshire, and 1·72 in Monmouthshire. No deaths were referred to this disease either in Huntingdonshire or in Rutlandshire, and the rates did not exceed 0·03 per 1000 in Norfolk and 0·08 in Cambridgeshire. In the 76 great towns measles caused an average mortality of 0·59 per 1000. In seventeen of these towns no deaths from this disease occurred: the highest rates were 2·60 in Cardiff, 2·81 in South Shields, 2·87 in Newport (Mon.), and 3·03 in Hull. In the 103 smaller towns, for which quarterly returns are now published, measles was fatal, on the average, to 0·41 per 1000 of the population, and among these towns it showed exceptional fatality in Maidstone, Richmond, Radcliffe, Aberdare, Oldbury, and Mountain Ash. In the remainder of England and Wales the death-rate from measles averaged 0·31 per 1000. Among registration districts and sub-districts outside the 179 chief towns, the disease was especially fatal in Eynsham, Chippenham, Glastonbury, Leek, Bewdley, Warsop, Ashover, Knottingley, Pontefract, Darton, Aberystwith, Glyncoirwg, and Beaufort.

Diarrhœa was the stated cause of death in 3,461 instances last quarter. These deaths were equal to an annual mortality of 0·42 per 1000 at all ages, which is almost identical with the average rate, 0·40, for the fourth quarter of the year. The highest county rates from diarrhœa last quarter were 0·59 in Lancashire, 0·64 in Warwickshire, 0·67 in Nottinghamshire, and 0·77 in Staffordshire. No deaths from diarrhœa were returned from Rutlandshire, and the rate did not exceed 0·09 per 1000 either in Oxfordshire or in North Wales. In the 76 great towns the average death-rate from diarrhœa was 0·59 per 1000. No death from this disease was returned from Handsworth, and the mortality did not exceed 0·07 per 1000 either in Smethwick or in Wallasey. The highest diarrhœa rates were 1·21 in Merthyr Tydfil, 1·30 in West Ham, 1·49 in Hanley, 1·52 in Wolverhampton, and 2·55 in Preston. In the 103 smaller towns diarrhœa was fatal, on the average, to 0·41 per 1000, and among them it was especially fatal in Burslem, Barnsley, Longton,

Farnworth, Ilkestone, and Gorton. In the remainder of England and Wales the death-rate from diarrhoea averaged 0·21 per 1000.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was the registered cause of 2135 deaths in the course of the quarter, a number equal to 0·26 per 1000, which is below the decennial average rate, 0·32, in the fourth quarter of the year. The rate of death from diphtheria did not exceed 0·03 per 1000 in Shropshire, and was only slightly higher, viz., 0·04 per 1000, in Cambridgeshire and in Dorsetshire. The counties in which this disease was most fatal were Bedfordshire and South Wales 0·43, Gloucestershire 0·45, and the North Riding of Yorkshire 0·47. Among the 76 great towns diphtheria caused an average mortality of 0·29 per 1000. The rate did not exceed 0·04 per 1000 either in Stockport or in South Shields, and was only 0·05 per 1000 in Aston Manor and in Newport (Mon.). The highest diphtheria rates were 0·84 in Middlesbrough, 1·01 in Hanley, and 1·09 in Bury. In the 103 smaller towns the mortality from this disease averaged 0·25 per 1000; it was especially high in Eccles, Darlington, Longton, Swinton & Pendlebury, Bedford, and Heywood. In the remainder of England and Wales diphtheria was fatal in the average proportion of 0·22 per 1000 of the population. Among registration districts and sub-districts outside the 179 chief towns diphtheria showed excessive fatality in Winslow, West Brixworth, Penzance, Runcorn, Lowton, Knott Lanes, Ulverston, Bywell, and Denbigh.

Whooping-cough was returned as the cause of 1869 deaths during the quarter, the deaths so referred being equal to an annual death-rate of 0·22 per 1000, which is slightly below the average rate (0·25) in the ten previous corresponding quarters. No deaths from whooping-cough were registered either in Rutlandshire or in Westmorland, and the death-rate did not exceed 0·04 in Devonshire; in the other counties the rate rose to 0·33 in Hampshire 0·34 in London, 0·35 in Lincolnshire, 0·37 in Middlesex, and 0·46 in Norfolk. Among the 76 great towns, whooping-cough was fatal in the average proportion of 0·26 per 1000 of the population. In ten of these towns no deaths whatever were referred to this disease, but the death-rate was equal to 0·72 per 1000 annually in Tynemouth, 0·75 in Stockport, 0·82 in Norwich, and 0·90 in Cardiff. In the 103 smaller towns the death-rate from whooping-cough averaged 0·20 per 1000, and was especially high in Crewe, Edmonton, Wakefield, Jarrow, Lincoln, and Wood Green. In the remainder of England and Wales whooping-cough accounted for an average mortality of 0·19 per 1000. Among registration districts and sub-districts outside the 179 chief towns, the mortality from this disease was excessive in Titchfield, East Dereham, Canford, Gresley, Worksep, Aspull, and Fishguard.

Scarlet fever was the registered cause of 1361 deaths last quarter, the deaths so returned corresponding to an annual rate of 0·16 per 1000 living, which is slightly lower than the average rate (0·18) in the fourth quarter of the previous ten years. No deaths from scarlet fever were registered in the counties of Buckingham, Huntingdon, Hereford, Rutland, or Westmorland, and the rate of mortality from this disease did not exceed 0·02 either in Bedford, Dorset, or Cornwall. In the other counties the highest rates were 0·31 per 1000 both in Staffordshire and in Warwickshire, 0·32 in Northumberland, and 0·35 in Lancashire. In the 76 great towns scarlet fever accounted for an average mortality equal to 0·20 per annum. No deaths from this disease were recorded in nine out of the 76 towns: the highest death-rates from scarlet fever were 0·61 in Wigan, 0·69 in St. Helens, 0·76 in Bolton and in Burnley, and 1·07 in West Bromwich. In the 103 smaller towns scarlet fever was fatal in the average proportion of 0·17 per 1000, and among them showed exceptional fatality in Aberdare, Wednesbury, Swinton & Pendlebury, Llanelly, Oldbury, and Tipton. In the remainder of England and Wales the disease caused an average mortality of 0·12 per 1000. Among registra-

tion districts and sub-districts outside the 179 chief towns, scarlet fever showed excessive fatality in Banbury, Chippenham, Ashburton, Williton, Tamworth, Market Rasen, and Llandaff.

"Fever" (including the three principal forms—*typhus*, *enteric*, and *simple continued fevers*) accounted for 1285 deaths last quarter, and for a death-rate equal to 0·15 per 1000 of the population, as compared with 0·25, the decennial average rate, for the fourth quarter of the year. No deaths from "fever" were reported either in Huntingdonshire, Herefordshire, or Rutlandshire, and the rate did not exceed 0·03 per 1000 in five other counties. The highest county rates were 0·21 in Hampshire and in Essex, 0·22 in Monmouthshire, 0·23 in Lancashire, and 0·25 in Nottinghamshire. Among the 76 great towns "fever" caused an average mortality equal to 0·19 per 1000 annually. No deaths from "fever" were recorded in either of seven of the great towns, but the rate was equal to 0·37 in Merthyr Tydfil, 0·39 in Liverpool, 0·40 in Wallasey, 0·44 in Ipswich, and 0·46 in Grimsby. In the 103 smaller towns "fever" caused an annual average mortality equal to 0·17 per 1000, and was exceptionally fatal in Hyde, Mountain Ash, Todmorden, Southend on Sea, Barnsley, and Widnes. In the remainder of England and Wales the death-rate from "fever" averaged 0·11 per 1000. Among registration districts and sub-districts outside the 179 chief towns, "fever" was especially fatal in Northfleet, Broadstairs, Winchester, Foleshill, and Hucknall Torkard.

Small-pox was fatal in 103 instances last quarter, as compared with 1121, 1054, and 183, respectively, in the three quarters immediately preceding. Of the 103 deaths from small-pox, 90 belonged to one or other of the 179 chief towns; 11 of these 90 deaths belonged to Liverpool, 10 to Merthyr Tydfil, 8 to Chatham, 7 to Stockport, 6 to Bury, 6 to Oldham, 5 to Bolton, 4 to Leeds, and 4 to Chorley.

Violent Deaths.

The deaths in England and Wales which were referred to different forms of violence, either accidental or otherwise, numbered 4854 last quarter, and corresponded to an annual rate of 0·58 per 1000 of the population, against an average of 0·61 in the ten preceding fourth quarters. In registration counties, the lowest death-rates from violence were 0·19 in Cornwall and in Westmorland, 0·24 in Wiltshire, and 0·30 in Oxfordshire; the highest were 0·66 in Cheshire and in Durham, 0·69 in London, 0·72 in Warwickshire, and 0·74 in Monmouthshire and in South Wales. In the 76 great towns the mean rate was 0·64 per 1000 living; among the several towns the rate was only 0·07 in Smethwick, 0·18 in Leyton, and 0·20 in Hornsey, but it rose to 1·02 in Burton on Trent, 1·07 in Stockport, 1·13 in West Bromwich, 1·18 in Bootle, and 1·21 in Merthyr Tydfil.

Certification of Causes of Death.

Of the 138,320 deaths registered in England and Wales last quarter, the causes of 126,630, or 91·6 per cent., were certified by registered medical practitioners, and the causes of 9173, or 6·6 per cent., by coroners after inquest; whilst the causes of the remaining 2517, or 1·8 per cent., were not certified; the average proportion of uncertified deaths in the ten preceding fourth quarters having been 2·3 per cent. No uncertified deaths were registered in Rutlandshire, and the proportion was less than 1 per cent. in Surrey, Middlesex, Oxfordshire, Somersetshire, Herefordshire, and Monmouthshire, but it reached 3·6 in North Wales, 3·8 in Kent, 3·9 in Derbyshire, 4·0 in Durham, 4·7 in Westmorland, and 5·7 in Huntingdonshire. In the 76 great towns the mean proportion of uncertified deaths was 1·2 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Bournemouth, Southampton, Great Yarmouth, Devonport, Derby, West Hartlepool, or Newport (Mon.), the proportion per cent. rose to 4·1 in Handsworth, 4·4 in Barrow in Furness, 4·5 in St. Helens, in Warrington, and in Preston, 4·6 in Rochdale, 4·7 in Sunderland, 6·4 in Gateshead, and 6·5 in South Shields.

Inquests.

Inquests were held in England and Wales concerning 9173, or 6·6 per cent., of the total deaths, the mean proportion in the ten preceding fourth quarters having been 6·4 per cent. In the 76 great towns the proportion of inquest cases was 7·6 per cent., ranging from 1·8 in Smethwick, 2·7 in King's Norton, 3·1 in St. Helens and in Rotherham, and 3·2 in Stockton on Tees, to 10·5 in Ipswich and in Great Yarmouth, 11·1 in Burton on Trent and in Wallasey, 11·2 in Derby, 11·7 in Southampton, and 12·2 in Tottenham.

Deaths in Public Institutions.

The total deaths registered in England and Wales included 22,266, or 16·1 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding fourth quarters having been 13·5 per cent. In the 76 great towns the deaths in public institutions averaged 21·6 per cent. of the total deaths, the lowest percentages in the several towns being 2·4 in Handsworth, 3·8 in Rhondda, 4·3 in Smethwick, 5·5 in Hanley, and 6·0 in Gateshead, and the highest 20·9 in Great Yarmouth, 21·1 in Burton on Trent, 22·4 in Manchester, 25·8 in Brighton and in Birmingham, 27·5 in Liverpool, and 32·8 in London.

LONDON.

The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside the County of London, but exclude the deaths of persons not belonging to London which occurred in the Willesden Workhouse at Hackney, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth and Streatham, and in the Metropolitan Asylums Board Hospitals within the County of London. The death-rate thus computed was equal to 17·7 annually per 1000 from all causes, and to 1·79 per 1000 from the principal epidemic diseases (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London be excluded, the rates will not exceed 17·2 and 1·76 per 1000 respectively. Table X. shows the death-rate in London after this correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the twenty-nine Metropolitan Boroughs, corrected by the distribution of all deaths in public institutions to the Boroughs to which the deceased persons had belonged, are also shown.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual death-rate per 1000 living last quarter was 17·2 in Edinburgh, 19·8 in Glasgow, 27·6 in Dublin, and 22·8 in Belfast, against 17·7 in London.

COLONIAL AND FOREIGN CITIES.

From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-three of the Colonial and Foreign cities, with an aggregate population estimated at nearly nineteen and a half millions, corresponded to an annual rate of 20·0 per 1000 persons living, against a rate of 17·9 in seventy-six great English towns.

In twenty-one European and American cities the mean rate was 18·3 per 1000, against 17·9 in seventy-six great English towns. In Paris the rate was 17·2, in Vienna 18·9, and in New York 16·6, against 17·7 in London. The rate for Berlin cannot be stated, as no copies of statistical returns have been received from that city during the year. Among the other cities the death-rates ranged from 13·5 in Stockholm, 15·1 in Antwerp, 15·3 in Copenhagen, and 15·6 in Amsterdam, to 22·1 in Venice, 23·4 in Prague, 24·1 in Moscow, and 25·1 in Trieste. In Madras the death-rate was 44·6, and in Bombay it was 49·2.

Small-pox caused 54 deaths in Boston, 43 in Bombay, 20 in St. Petersburg, 10 in Antwerp, 10 in Moscow, and 8 in Philadelphia. In proportion to population, *measles* was most fatal in Bombay, Christiania, St. Petersburg, and Moscow; *scarlet fever* in Moscow, Hamburg, Prague, and Buda-Pesth; *diphtheria* in St. Petersburg, Moscow, New York, Philadelphia, Boston, and Baltimore; *whooping-cough* in Hamburg; "*fever*" in the Indian cities, and in St. Petersburg, Trieste, New York, Philadelphia, and New Orleans; and *diarrhæal diseases* in the Indian cities, and in Brussels, Antwerp, St. Petersburg, Moscow, Munich, Prague, Venice, and New Orleans.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales during the fourth quarter of the year 1902 (*see* pages xxiii.-xxvi.).

The Year 1902.

According to the quarterly returns furnished by local registrars' 942,819 births and 537,080 deaths were registered in England and Wales during the year 1902. The natural increase of population, by excess of births over deaths, was therefore 405,739, the average annual increase in the preceding five years having been 363,053.

The returns issued by the Board of Trade show that 387,116 emigrants embarked during the year from the various ports in the United Kingdom at which emigration officers are stationed, for places beyond Europe. Distributing proportionally 6,852 emigrants whose nationality was not ascertained, the emigrants who were natives of the United Kingdom numbered 211,414, of whom 142,029 were English, 26,852 Scottish, and 42,533 Irish, whilst 175,702 others were of foreign origin. In proportion to population the numbers of emigrants accredited to England and Wales, Scotland, and Ireland were 4,304, 5,923, and 9,610 per million respectively; the proportion for England and Wales shows an increase of 20·6 per cent., the proportion for Scotland an increase of 20·6 per cent., and the proportion for Ireland an increase of 8·2 per cent., as compared with the several figures for the previous year.

The birth-rate in England and Wales in 1902 was 28·6 per 1000 of the population, which is 0·1 per 1000 higher than the rate in 1901, but lower than that in any other year on record; compared with the average in the ten years 1892-1901, the birth-rate in 1902 shows a decrease of 1·0 per 1000.

The death-rate in 1902 was 16·3 per 1000, which is the lowest rate on record, the only previously recorded rates below 17 per 1000 having been 16·5 in 1894 and 16·9 in 1901; compared with the average rate in the ten years 1892-1901, the death-rate in 1902 shows a decrease of 1·6 per 1000.

The 537,080 deaths registered in 1902 included 125,538 of infants under one year of age, 247,129 of persons aged between one year and 60 years, and 164,413 of persons aged 60 years and upwards. The rate of mortality among infants under one year of age to 1000 registered births was 133, which is, with the single exception of a rate of 130 per 1000 births in 1881, the lowest rate on record, and is 21 per 1000 below the mean for the ten years 1892-1901. The death-rate among persons aged between one year and 60 years was 8·3, and that among persons aged 60 years and upwards was 67·4, per 1000 of the estimated populations at the respective groups of ages.

The total deaths registered included 12,673 from measles, 12,465 from diarrhoea, 9,469 from whooping-cough, 7,703 from diphtheria, 4,810 from scarlet fever, 4,214 from "fever," and 2,461 from small-pox. Thus 53,795 deaths were attributed to these epidemic diseases, corresponding to a rate of 1·64 per 1000 living, against 2·19, 1·99, and 2·05 respectively in the three preceding years.

ANNUAL DEATH-RATES per 1000 from ALL CAUSES, and from certain EPIDEMIC DISEASES, during the year 1902.

	All Causes.	Diseases in Cols. 3-9.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping Cough.	Fever.	Diarrhoea.	Deaths under 1 Year per 1000 Births.

To different forms of violence 19,504 deaths were referred, being in the proportion of 0·59 per 1000 of the population, against 0·64 and 0·63 respectively in the preceding two years.

The 537,080 deaths included 35,848 cases, or 6·7 per cent., in which inquests were held; and 9,644 cases, or 1·8 per cent., in which the causes were not certified either by registered medical practitioners or by coroners.

The foregoing statistics for the year 1902, having been derived from returns furnished quarterly by the local registrars, are subject to revision when the causes of death and other details shall have been finally classified and tabulated for publication in the Registrar-General's Sixty-fifth Annual Report, which is now in course of preparation.

^a The Registration or Union Counties consist of groups of Registration Districts, which are generally co-extensive in that Registration County in which the principal town of the district, or the greater part of the population, is Geographical Counties.

^b These areas have been revised by the Ordnance Survey Department for the Report on the Census of 1901.

^c Revised populations have been inserted throughout for Division I., Division II., Division III. (except Shire and Shropshire), Division VII. (except Rutlandshire), Division VIII., Division IX., Division X. (except districts. For England and Wales the unreviised totals have been retained.

^d The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^e See page 6, note b.

^f On 1st April, 1901, part of Hornsey sub-district (129-1) was transferred from Middlesex to London. The averages Midland Division.

NOTE—The Registrars alone must be considered responsible for the accuracy

REGISTRATION COUNTIES, and REGISTRATION DISTRICTS of ENGLAND; Births and INFANTS under one year of Age, and of PERSONS aged 60 years and upwards from TUBERCULOSIS, WHOOPING-COUGH, FEVER, DIARRHOEA, CHOLERA, and VIOLENCE, also of DEATH, registered in the Quarter ended 31st December 1902, in the DIVISIONS and REGISTRATION SUB-DISTRICTS of ENGLAND AND WALES.

Divisions and Registration Counties.*	The DEATHS in the Quarter are stated by the Registrars to include													
	Deaths of		Deaths from									Inquest Cases.	Deaths in Public Insti- tutions.	Uncertified Causes of Death.
	Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Cholera.	Violence.

Owing to numerous changes of boundary on 1st April, 1901, the averages of the deaths for the three preceding years would be misleading; they are, therefore, omitted from this table.

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purpose connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note ^b.

^b For London, the figures given for the quarter are derived from the Weekly Returns made by the Registrars.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

Owing to numerous changes of boundary on 1st April, 1901, the averages of the deaths for the three preceding years would be misleading; they are, therefore, omitted from this table.

The Registration Sub-districts (2057 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district is within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; H indicates a Hospital or Infirmary; and L a Lunatic Asylum.

Owing to numerous changes of boundary on 1st April, 1901, the averages of the deaths for the three preceding years would be misleading; they are, therefore, omitted from this table.

* See page 6, note B.

* 25: 6, 7.—On 1st October, 1902, Wandsworth sub-district was divided into two, Springfield (6) and Southfields (7).
See page 70.*

* 129: 1.—In consequence of changes of boundary on 1st April, 1901, the average number of deaths for the three preceding years would be misleading, and is therefore omitted.

+ 129: 2, 5.—On 1st October, 1902, the boundary between these sub-districts was altered. See page 70.

* 137: 2, 4.—Of the 8 deaths from diphtheria (6 of which were registered during December), 6 belonged to Watford Urban District.

230: 2. 232: 1. 240: 2.—On 1st April, 1902, the Superintendent Registrar's District of GUILTCROSS (231) was dissolved, its constituent parishes transferred to the districts of DEPWADE, WAYLAND, and THETFORD
235: 2.—The number of births in this sub-district should have been returned as 59, instead of 61: notice of the error received too late for the correction of the tables.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE
QUARTER ENDING DECEMBER 31ST, 1902.

EXTRACTED FROM THE
MONTHLY WEATHER REPORTS
OF THE
METEOROLOGICAL OFFICE
BASED ON OBSERVATIONS AT 117 STATIONS.*

OCTOBER, 1902.

General Summary.—The weather of October was mostly cloudy and changeable, especially around the middle of the month, when gales and heavy rains occurred in nearly all districts. Thunder and lightning were reported in several parts of England on the 5th, in the south of Ireland on the 7th, in the Scilly and Channel Islands on the 9th, and over our eastern, central, and southern counties on the 14th. On the last-mentioned date a shock of earthquake was experienced at Laudale (Loch Sunart). Pressure and temperature were above the mean; the winds were rather variable in the south, but mainly from some Westerly point in the north; rainfall was considerably less than the average in most places; bright sunshine was very deficient excepting in the north of Scotland.

Pressure.—*Mean* at 8 a.m. ranged from 30·0 ins. and upwards in the extreme south of Ireland and also in the Channel Islands to 29·83 ins. and less in the north of Scotland. The actual values were in all cases above the average, and as the excess was somewhat greater in Ireland than in Great Britain the distribution of pressure was favourable for winds from the northward, rather than from the southward, of West, as is usually the case in October. *Highest* readings occurred, as a rule, on the 24th or 25th, when the barometer rose to 30·5 ins. and upwards in the south of England, and to 30·3 ins. and upwards in all other parts of the United Kingdom. In the Shetlands, however, and the north-east of Scotland the highest readings, 30·4 ins. and upwards, were recorded on the 2nd. *Lowest* readings occurred over the country generally during the passage of a deep cyclonic system on the 15th, when the barometer fell to 28·6 ins. and less in the north of Scotland, to 29·0 ins. and less over the northern parts of the United Kingdom generally, and to 29·5 ins. and less on all but our extreme southern coasts. In the last-mentioned district the minimum values, 29·2 ins. to 29·5 ins., were registered on the 10th. *Range* was moderate in the south but rather large in the north.

Depressions were not especially numerous for the time of year, and were, as a rule, of little intensity. The most important disturbance was observed on the 15th and 16th, the centre in this case moving in an east-north-easterly direction across the north of Scotland, the North Sea, and the south of Scandinavia, and thence very slowly to Western Russia where the system appears to have dispersed.

Anticyclones.—During the first few days of the month a large anticyclone covered nearly the whole of our islands, the central portion of the system lying at first to the northward of Scotland, but afterwards moving south-eastwards to Western and Southern Russia,

* Tables of observations from 24 stations specially contributed for the information of the Registrar-General are given on pp. 79–82. Of these stations 21 are not included in the 117 upon the observations at which the General Remarks are based.

the final disappearance of the system from our neighbourhood taking place on the 5th. On the 11th and 12th another high pressure area extended from Spain over a considerable portion of Western Europe, but soon moved away to the southward. On the 21st a large anticyclone spread from the Atlantic over all our more southern districts, and, temporarily, on the 25th over the entire kingdom, after which the system broke up, one portion moving away to the Atlantic and the other to Eastern Europe. Shortly afterwards, *i.e.*, on the 27th, another high pressure area extended over us from the southward, the system moving eastwards on the 29th, but being reinforced on the following day by a new area which came in from the Atlantic. At the close of the month the combined system was drifting away to Southern Europe.

Winds showed considerable variability in the south, but were mainly from some Westerly quarter (South-west to North-west) in the north. On the more exposed parts of the English and Irish coasts gales were rather numerous; at Malin Head and Plymouth they occurred on as many as nine days. In Scotland, however, the weather was somewhat quieter, and over the kingdom generally the gales experienced were less violent than in many recent Octobers.

Temperature.—*Mean at sea level* ranged from between 54° and 55° in the Scilly and Channel Islands, and from 52° and upwards on our south-west coasts generally, to between 46° and 47° over the central and north-eastern parts of Scotland, the general distribution over the United Kingdom being in fair agreement with the normal. Over eastern and central Scotland and on the south-east coasts of England the mean values were slightly below the average, but in all other localities they were above it, the excess being greatest (between two and two-and-a-half degrees) at some stations in the south of Ireland. *Highest* readings occurred over England mostly on the 10th or 13th, but in Ireland and Scotland at varying times, chiefly in the opening or closing weeks. Over the kingdom generally the thermometer did not rise much above 60°, but at several places in the south and east of England it reached or slightly exceeded 65°, the highest reading reported being 67° in London and at Southampton. *Lowest* readings were registered at very irregular times and varied greatly in different places; frost occurred at many inland stations, the lowest temperatures recorded in the screen being 22° at Braemar, 25° at Newton Reigny, and 26° at Lairg. *Range* was generally rather small for the time of year. *Vapour Pressure* varied between 0·33 in. and 0·35 in. on the west and south coasts of Great Britain, whence it decreased to a little below 0·26 in. in the east of Scotland. *Relative Humidity* varied greatly in different places, but was, as a rule, somewhat large, the percentage values exceeding 90 in many parts of the kingdom, and reaching 94 at Dungeness and 95 at Stornoway.

Rainfall was considerably less than the average over the United Kingdom generally (less than half at some stations in the eastern parts both of Great Britain and Ireland and also in the South of Scotland), but showed an excess at a few isolated places in the north and north-west. The largest aggregates reported were 10·3 ins. at Glencarron, 8·7 ins. at Fort William, and 8·4 ins. at Lauder; the smallest being 0·9 in. at Leith, 1·1 in. at Yarmouth and Cambridge, and 1·2 in. at Donaghadee and Hollesley Bay. Although the total amount was small, the number of days with rain was in many places in excess of the average, more than 20 being reported not only in Ireland and Scotland, where such numbers are usual in the autumn and winter months, but also in several parts of England. Falls exceeding an inch in 24 hours were recorded at some of the English stations on the 9th and 13th, and in the west and north-west of Scotland on the 14th, 15th, and 23rd, the largest daily amount reported being 2·7 ins. at Glencarron on the 15th.

Bright Sunshine was very deficient in all districts excepting the north of Scotland, where the amount was in excess of the average. The percentage of the possible duration ranged from 35 at Jersey, and 30 or more at several stations in the north and north-east of Scotland, to 20 or less in many parts of England, and to only 13 in London and at Birmingham.

NOVEMBER, 1902.

General Summary.—Until the closing week, when rain fell very generally, the weather of November was mostly fair and dry in the eastern parts of the United Kingdom, with, however, occasional fogs or mists. In the extreme south-western, western, and north-western districts, the conditions were far less settled, and in the south of Ireland, especially, rain was frequent and often heavy. Lightning was seen at scattered places in the west and north-west of England on the 8th, and a little snow fell in several parts of our southern counties between the 20th and 23rd. Pressure was below the average in most places; temperature was above the normal, and considerably so in the north of Scotland; the winds were mainly from the Southward and South-eastward; rainfall was less than the average, excepting in Ireland and the south-west of England; bright sunshine varied considerably in amount in different places, but was deficient at most of our southern stations.

Pressure.—*Mean* at 8 a.m. ranged from 29.90 ins. and upwards in the east and south-east of England to 29.65 ins. and less in the west of Ireland. The distribution over our islands was, therefore, of quite an abnormal character, the moderate gradient for South-westerly winds usually existing in November being replaced by irregular, but rather steep, gradients for Southerly and South-easterly breezes. On many parts of our north and east coasts the mean values were slightly above the average, but in all other places they were below it, the deficit being large (0.18 in. to 0.22 in.) on our extreme west and south-west coasts. *Highest* readings were observed on the 17th or 18th, when the barometer rose to 30.5 ins. and upwards on the north-east coasts of Scotland, to 30.3 ins. and upwards over the northern, eastern and central parts of the United Kingdom generally, and to 30.1 ins. and upwards in all districts, excepting the south-west of Ireland. *Lowest* readings occurred at the northern stations on the 8th or 9th, but at the southern stations on the 24th or 25th, when each portion of the country was visited, successively, by cyclonic systems of considerable depth. On the former occasion the barometer fell below 28.8 ins. in the Hebrides, and below 29.0 ins. over Scotland and the north of Ireland generally; on the latter occasion it fell nearly as low as 28.5 ins. in the Scilly Islands, and below 28.8 ins. on all our south-west coasts. *Range* was large in the immediate neighbourhood of each of these minima, but moderate elsewhere.

Depressions.—Owing to the persistence of high pressure areas over northern Europe the centres of the Atlantic depressions failed to advance eastwards directly over the United Kingdom. In many cases they travelled northwards along our extreme western coasts, while in other instances they skirted the west and north of Scotland. Between the 24th and 26th the centre of a cyclonic area (originally of considerable depth), which appeared off the south-west of Ireland, moved in an east-south-easterly direction across the western part of the English Channel and the north of France, the system gradually filling up as it progressed, and eventually disappearing a little to the eastward of Paris.

Anticyclones.—Four such systems were observed. The first, which had extended from the Atlantic over these islands and France at the end of October, moved away steadily eastwards after the 2nd. The second was developed over Scandinavia on the 5th but soon passed away to the south-eastward. The third extended gradually westwards from Russia on the 13th and 14th; on the 15th its central area took up a fairly permanent position over northern Europe, the borders of the system remaining, however, over the greater part of the United Kingdom until the 20th. The fourth, a system of very moderate height, advanced over Scandinavia from the northward at the close of the month.

Winds.—Excepting on our extreme western coasts, where breezes from South-West or West were not uncommon, the prevailing winds were mainly from points between South and East, the proportion of winds from the South-Eastward being unusually large in all parts of the kingdom. Gales were numerous, especially in the west and extreme north (at Malin Head they occurred on 14 days, and at Deerness and Scilly on as many as 17 days), but were seldom of any great strength.

Temperature.—*Mean at sea level* ranged from a little above 51° in the Scilly Islands, and from 49° and upwards on our south-west coasts generally to 45° or less over the northern parts of central Ireland, and to 44° or less at some stations in central Scotland and the north and east of England. The general distribution over our islands was in fair agreement with the normal, but the actual values were above the average, the excess being slight in the south, but larger in the north, and especially in the north of Scotland, where it amounted in many places to more than 4°. *Highest* readings occurred, as a rule, either on the 1st or on the 6th or 7th, the thermometer on one or other of these dates rising to 60° or slightly above it in several isolated parts of the kingdom. *Lowest* readings were registered at various times in different localities, but chiefly between the 19th and 23rd, when sharp frost occurred very generally; the lowest readings reported were 23° at Bawtry and 24° at Colly Weston and Kilkenny. *Range* was everywhere moderate. *Vapour Pressure* ranged from 0.32 in. at Scilly, and 0.28 in. or more on most parts of our western and southern coasts, to 0.24 in. or rather less over the central portions of Scotland and the north of England. *Relative Humidity* was high over the greater part of England and Ireland, more than 90 per cent. being reported in many places; in the south-west of England and the east of Scotland the percentage values were mostly below 85.

Rainfall was in excess of the average at most stations in Ireland and the south-west of England, but was deficient elsewhere; at many places in the northern parts of Great Britain the total amount was considerably less than half the normal, and at Leith it was less than one-fourth. The largest aggregates reported were 8.5 ins. at Valencia, 7.9 ins. at Killarney, and 7.3 ins. at Cally (Gatehouse); the smallest being 0.5 in. at Leith, 0.7 in. at Nairn, and 0.9 in. at Wick. The number of days with rain was small in the eastern and central parts of Great Britain, but much larger in the west; at Valencia there were as many as 25, and at Parsonstown 24 such occasions. Falls exceeding an inch in 24 hours were recorded on several occasions in Ireland and the west of Scotland, the largest daily amounts reported

being 1·5 ins. at Parsonstown and Kilkenny on the 6th, and at Valencia on the 10th, and 1·4 ins. at Killarney on the 11th, and at Cally (Gatehouse) on the 28th. A little snow fell in various parts of the south of England between the 20th and 22nd.

Bright Sunshine varied considerably in amount in different parts of the kingdom, but was less than the average at most of our southern and south-western stations, the deficiency being considerable at Valencia. The percentage of the possible duration ranged from 34 at Felixstowe, Scilly, and Jersey, to 15 or less at several places in the western, northern, and central parts of the United Kingdom, to 10 at Newcastle-on-Tyne, and to only 4 at Glasgow.

DECEMBER, 1902.

General Summary.—After a day or two of mild and very rainy weather a keen frost extended early in the month from the Continent over nearly the whole kingdom, while snow showers occurred in several parts of Great Britain. On the 12th and 13th a decided rise of temperature was experienced, the weather being at first wet and unsettled, but afterwards fair and dry, though mostly cloudy. In the closing week the conditions were stormy and rainy, and, after the 27th, snow fell in most districts. Thunder and lightning were reported on two or three occasions in the north of Scotland, and in North Wales and the Isle of Man on the 30th. On the morning of the 6th two small waterspouts were seen off Dungeness. Pressure and temperature were above the average; the winds were chiefly Westerly or South-westerly; rainfall was in excess of the normal in Scotland, but deficient in most parts of England and Ireland; bright sunshine was less than the average at all but a few of our north-western and extreme northern stations.

Pressure.—*Mean* at 8 a.m. ranged from 30·10 ins. and upwards in the Channel Islands, and from 30·05 ins. and upwards in the south of England generally to 29·80 ins. and less in the north of Scotland, and to 29·75 ins. and less in the Hebrides. The general distribution over our islands agreed very closely with the normal, but the mean values were above the average, and, as the excess was greater in the South than in the North, the barometric gradient was somewhat steeper than usual. *Highest* readings were recorded in most places on the 4th, when the barometer rose to 30·6 ins. and upwards in the east of Scotland and the north of England, and to 30·4 ins. and upwards on all but our extreme western coasts. *Lowest* readings were observed on the 29th or 30th, when the barometer fell below 28·3 ins. in the north of Scotland, below 28·5 ins. over Scotland generally, and below 29·0 ins. in all but our south-western districts. *Range* was large in the north (considerably more than 2 ins. in the north and east of Scotland) but moderate in the south.

Depressions.—Until the closing week the depressions observed in the neighbourhood of these islands were few in number, and, as a rule, of little importance. On the 25th and 26th, however, a system of considerable intensity (secondary to a larger disturbance which traversed the north of Scandinavia) moved rapidly eastwards from the neighbourhood of the Faröe Islands across Scandinavia and Russia, the earlier stages of its progress being marked by very strong Westerly to North-westerly gales on our own northern coasts. During the last four days of the month a well marked depression advanced over Scotland from the northward and moved slowly south-eastwards across the North Sea. This disturbance was originally of considerable depth, but in the course of its passage it gradually became shallower, and on the 1st January it filled up completely over north Germany.

Anticyclones.—On the 3rd a large anticyclone spread over the United Kingdom from Northern Europe, the central portion of the system being situated for the most part over the south of Scandinavia. After the 10th the area moved away in a south-easterly direction, its influence disappearing from these islands on the 12th. On the 19th and 20th another anticyclone spread over the kingdom from the south-westward, its central portion being directly over England on the 22nd, after which the entire system drifted away to the eastward. A new high pressure area extended over our south-western districts on the 25th and 26th, but soon receded in a southerly direction.

Winds were chiefly from the Westward or South-westward, but in the southern parts of the kingdom there was a fair proportion of breezes from the eastward, and in Scotland from the South-eastward. Gales were numerous, especially in the west and extreme north; at Wick they occurred on 13 days, at Stornoway on 16, and at Malin Head on as many as 18. The Westerly to North-westerly gale which blew over our northern districts on the 25th was severe in many places.

Temperature.—*Mean at sea level* ranged from a little above 47° at Scilly, and from 45° and upwards on our south-west coasts generally to 42° and less over central Ireland, to 41° and less at most stations in the northern and eastern parts of Great Britain, and to between 37° and 40° in inland parts of the north of Scotland. The general distribution over our islands was in close agreement with the normal, but the mean values were in nearly all cases above the average, the excess varying greatly in amount in different places, but being upon the whole greatest in the north-east of England. *Highest* readings were recorded, as a rule, between the 14th and 17th, when the thermometer rose to 55° and upwards in most districts, and to 59° at Hollesley Bay, Llandudno, and Arlington. *Lowest* readings occurred mostly on or about the 7th, when the thermometer fell below 25° in all districts excepting the Channel Islands, and below 20° at many of our northern and inland stations; at Braemar and Loughborough the minimum on the 7th was as low as 14° . *Range* was moderate generally, but exceeded 35° in several parts of our northern and inland districts, and amounted to 42° at Loughborough. *Vapour Pressure* ranged from 0.26 in. and upwards on our extreme south-west coasts to 0.22 in. and less over the northern and central parts of Great Britain generally, and to a little below 0.20 in. in the east of Scotland. *Relative Humidity* varied from 93 per cent. at Spurn Head and Dungeness, to 85 per cent. or less in the east of Scotland and the Shetlands, and to only 79 per cent. at Aberdeen.

Rainfall amounted to less than the average in nearly all parts of England and Ireland, but exceeded the normal at most of the Scotch stations, and also in the extreme north of England. The largest aggregates reported were 12.4 ins. at Glencarron, 11.5 ins. at Laudale, and 7.0 ins. at Killarney; the smallest being 1.0 in. at Cambridge, 1.2 in. at Colly Weston, and 1.3 in. at Geldeston and Hereford. The number of days with rain was small over the eastern and central parts of England, but rather large on our extreme south-west, west and north coasts; at Valencia there were as many as 26 such occasions. Heavy falls occurred over the northern parts of Great Britain on the 1st and 2nd, in the western and northern parts of the kingdom generally on the 14th and 15th, and in the west and north of Scotland between the 25th and 28th. Snow showers were experienced in several parts of Great Britain between the 3rd and 5th, at some of the English stations on the 8th and 9th, in the north of Scotland on the 17th and 18th, and in many parts of the United Kingdom between the 28th and 30th.

Bright Sunshine was generally rather deficient, but exceeded the average at some of our north-western and extreme northern stations. The percentage of the possible duration ranged from 26 at Jersey and 20 or more on several parts of the English and Welsh coasts, to 10 or less at several places in the northern parts of Great Britain (and at Valencia) and to only 4 at Edinburgh and Glasgow.

NOTES ON THE SPECIAL TABLES ON pp. 79-81.

Temperature.—In October at Osborne a maximum of $67^{\circ}9$ was observed on the 10th.

In November the minimum at Barnet fell to $18^{\circ}8$ on the 21st.

In December a maximum of $60^{\circ}0$ was observed at Barnstaple on the 17th.

Thunderstorms occurred in October on the 11th at Halifax; on the 14th at Oxford and on the 21st at Carlisle.

In November none.

In December on the 28th at Eastbourne and Halifax; and on the 30th at Llandudno.

Thunder was heard but lightning was not seen in October on the 14th at Osborne.

In November and December, none.

Lightning seen but thunder not heard:—In October on the 9th at Guernsey and Truro.

In November on the 8th at Llandudno and Stonyhurst; and on the 9th at Osborne.

In December on the 28th at Osborne, Stonyhurst, and Truro; and on the 29th at Eastbourne.

Solar Halos seen:—In October on the 12th at Osborne and Oxford, and on the 25th at Oxford.

In November on the 3rd, 10th, and 13th at Oxford.

In December, none.

Lunar Halos seen :—In October on the 10th at Oxford ; on the 11th and 12th at Llandudno ; on the 14th at Llandudno, Salisbury, and Stonyhurst ; and from the 15th to the 21st at Llandudno.

In November on the 7th at Llandudno and Stonyhurst ; on the 8th at Llandudno ; on the 9th and 10th, at Hereford, Llandudno, and Oxford ; on the 11th and 12th at Llandudno ; on the 13th at Halifax, Llandudno, Osborne and Oxford ; and on the 14th at Llandudno and Oxford.

In December on the 15th at Hereford and Oxford ; and on the 16th at Hereford.

Snow was observed in October on the 7th at Stonyhurst ; and on the 15th at Oxford.

In November on the 20th at Oxford ; and on the 22nd at Hereford.

In December on the 2nd at Nottingham ; on the 3rd at Cambridge, Coventry, Eastbourne, Halifax, Hull, Nottingham and Stonyhurst ; on the 4th at Cambridge, Eastbourne, Halifax, Hull and Oxford ; on the 5th at Cambridge, Coventry, Halifax, Liverpool, Osborne, Oxford, Portsmouth and Stonyhurst ; on the 8th at Cambridge, Coventry, Hereford, Osborne and Oxford ; on the 9th at Barnet and Stonyhurst ; on the 10th at Stonyhurst and Truro ; on the 11th at Stonyhurst ; on the 18th at Osborne ; on the 28th at Carlisle, Halifax, Hull, Leeds, Osborne and Stonyhurst ; on the 29th at Halifax, Hull, Liverpool, Llandudno, Oxford, Salisbury and Stonyhurst ; on the 30th at Hull, Nottingham and Oxford.

Hail fell in October on the 15th at Llandudno ; on the 16th at Llandudno and Stonyhurst ; on the 21st at Carlisle and Stonyhurst ; and on the 28th and 30th at Portsmouth.

In November on the 8th at Halifax, Eastbourne and Leeds ; on the 9th at Eastbourne and Osborne ; on the 22nd at Hereford ; on the 28th at Eastbourne and Ventnor.

In December on the 1st at Eastbourne and Osborne ; on the 3rd at Llandudno ; on the 4th at Hull ; on the 8th, 9th, 12th and 13th at Portsmouth ; on the 15th at Stonyhurst ; on the 18th at Halifax ; on the 27th at Carlisle ; on the 28th at Cambridge, Eastbourne, Halifax, Llandudno, Nottingham, Stonyhurst and Truro ; on the 29th at Eastbourne, Halifax, Leeds, Liverpool, Llandudno, Portsmouth, Stonyhurst and Truro ; on the 30th at Eastbourne, Halifax, Liverpool, Llandudno and Truro ; and on the 31st at Llandudno.

Fog prevailed in October on the 6th at Hull and Truro ; on the 7th at Eastbourne, Osborne and Truro ; on the 8th at Eastbourne and Hull ; on the 9th at Hull ; on the 10th at Hull and Liverpool ; on the 12th at Hull and Salisbury ; on the 13th at Hull ; on the 18th at Hull, Oxford, and Truro ; on the 19th at Cambridge, Hull, Leeds, Oxford, and Truro ; on the 20th at Cambridge ; on the 21st at Salisbury ; on the 22nd at Hull ; on the 23rd at Cambridge, Eastbourne, Hull, Portsmouth, Salisbury, and Truro ; on the 24th at Osborne, Salisbury, and Truro ; on the 25th at Hull and Truro ; on the 27th at Leeds, Oxford, and Truro ; on the 28th at Cambridge, Eastbourne, Leeds, Oxford, and Truro ; on the 29th at Hull ; on the 30th at Eastbourne and Salisbury ; and on the 31st at Hull.

In November on the 1st at Salisbury and Truro ; on the 2nd at Cambridge and Leeds ; on the 3rd at Cambridge, Hereford, and Hull ; on the 4th at Cambridge, Halifax, Hereford, Hull, Leeds, Oxford, and Salisbury ; on the 5th at Halifax and Hull ; on the 6th at Eastbourne, Halifax, Hull, and Portsmouth ; on the 7th, 9th, 11th and 12th, at Hull ; on the 13th at Eastbourne and Salisbury ; on the 14th at Cambridge, Halifax, Hull, and Leeds ; on the 15th at Cambridge, Halifax, Hull, and Salisbury ; on the 16th at Halifax ; on the 17th at Hull ; on the 20th at Cambridge ; on the 21st at Hull ; on the 22nd at Cambridge and Halifax ; on the 23rd at Cambridge, Halifax, Hull, Portsmouth, and Truro ; on the 24th at Halifax, Hull, Leeds, Oxford, and Salisbury ; on the 25th at Halifax, Hull, and Leeds ; on the 26th at Hull and Leeds ; on the 27th at Cambridge, Eastbourne, Halifax, Hull, Leeds, and Oxford ; on the 28th at Halifax and Hull ; on the 29th at Hull ; and on the 30th at Eastbourne, Osborne, Portsmouth, and Truro.

In December on the 1st at Cambridge, Halifax, Hull, Osborne, Portsmouth, Salisbury, and Ventnor ; on the 2nd at Hull and Stonyhurst ; on the 3rd at Salisbury and Ventnor ; on the 7th and 9th at Hull ; on the 11th at Cambridge ; on the 12th at Cambridge, Oxford, Salisbury, and Truro ; on the 13th at Cambridge and Hull ; on the 14th and 16th at Hull ; on the 21st at Stonyhurst ; on the 22nd at Hull, Portsmouth, and Truro ; on the 23rd at Hull and Portsmouth ; on the 24th at Eastbourne, Hull, Portsmouth, Salisbury, and Truro ; and on the 31st at Truro.

MONTHLY METEOROLOGICAL TABLES FOR THE QUARTER ENDING DECEMBER 31ST, 1902.

NOTE.—The values in the Tables on pp. 79-81, except those for Greenwich, are the results of observations taken each day at 9 a.m. at all the stations, except Guernsey and Oxford where the hour was 8 a.m., at Eastbourne where the hour was 9.30 a.m., and at Halifax (Public Library) and Leeds where the hour was 10 a.m.

The mean values given in the Tables are the averages of the readings taken at the hour of observation. For the Tables up to and including those for the first quarter of 1902 Mr. Glaisher obtained values for the means for the month from observations at fixed hours by the introduction of corrections for the diurnal variation of the several elements. These corrections are given in Glaisher's Diurnal Range Tables, from which the following, appropriate to the months of the current quarter, are extracted :—

Month.	8 a.m.					9 a.m.					10 a.m.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING DECEMBER 31st, 1902.

The Observations have been corrected for instrumental errors, and the barometer readings have been reduced to 32° F., but not to sea level. The Hygrometrical results have been deduced from the seventh edition of Glaisher's Hygrometrical Tables.
